HIGHLIGHTS

Lake States

Lake States pulpwood production advanced 3 percent in 1978 to 4.91 million cords. Pulpwood demand was stimulated by the record national demand for paper and paperboard.

Major production gains were in hard maple, red pine, jack pine, and aspen. Elm production continued to fall from the peak set in 1976. Loggers cut 237,000 cords of whole tree chips, up 64 percent from 1977. Minnesota was the major producer, but Michigan production also expanded strongly.

Demand for Michigan and Wisconsin birch reached new highs, while demand for Minnesota birch plunged to the lowest point since 1969. Procurement of Wisconsin pine and hardwood residue climbed to high points.

Softwood residue receipts surpassed the 1977 record as Canada increased softwood residue shipments to the Lake States for the sixth consecutive year.

Pulpmills will soon be competing for aspen with waferboard plants since they use similar kinds of boltwood. Demand for Lake States aspen in waferboard manufacturing may increase by 600,000 to 800,000 cords by 1982 or 1983.

Central States

Demand for Central States pulpwood dropped slightly to 430,000 cords; hard hardwood production was the lowest since 1959. Half of the total production was exported; three-fourths of the exports was hardwood residue. Indiana, the leading producer, had a record output. Pulpwood receipts rose nominally; 15 percent was imported from 14 widely scattered States.

PULPWOOD PRODUCTION IN THE NORTH CENTRAL REGION BY COUNTY, 1978

James E. Blyth, *Principal Market Analyst,*
and **W. Brad Smith,** *Associate Mensurationist*

This is the 20th annual report of the pulpwood harvest in Lake States counties and the 19th annual report of the Central States harvest. Pulpwood constitutes more than half the timber products harvested annually in the Lake States (Michigan, Minnesota, and Wisconsin) and is an important product in the Central States (Illinois, Indiana, Iowa, and Missouri).

Current detailed pulpwood production[1] information is necessary for intelligent planning and decision-making in wood procurement, forest resource management, and forest industry development. Also, researchers need current pulpwood information for planning projects.

Pulpmills using North Central States timber in 1978 reported their pulpwood receipts[2] by species groups and counties of origin. This report presents the results of the survey, analyzes the data where appropriate, compares results with 1977 or earlier years, and discusses trends in pulpwood production and use.

The Lake States and Central States are discussed separately because the timber types in each area are different and less information can be released about the Central States (more detailed data on pulpwood production and receipts in the Central States would reveal the operations of individual mills).

Pulpwood production in Minnesota is completely and accurately shown. However, to prevent disclosure of confidential information about softwood pulpwood use by individual companies, the total quantity of softwood pulpwood imports and exports between Minnesota and Canada are not reported. Thus, some Minnesota softwood shipped to Canada is shown as remaining and used in Minnesota, and receipts of Canadian softwood in Minnesota are understated.

LAKE STATES

Production

Lake States pulpwood production climbed 3 percent in 1978 to 4.91 million cords (table 1). Demand for pulpwood rose because national demand for paper was at a record level. Paper and paperboard production in the United States was 63.7 million tons in 1978 compared to 62.0 million tons in 1977. Pulpwood consumption in the United States was higher in 1978 than in any year since 1974.

Nine out of 10 cords produced were roundwood (including chips from roundwood); the remainder was residue from local wood-using plants[3]. All of the production increase in 1978 came from roundwood as pulpwood production from residue fell 21,000 cords. Only 1 percent of total production was shipped outside the Lake States.

---

[1]*Pulpwood production, determined from mill receipts, is the annual volume of pulpwood cut in a specific county or region, plus the annual wood residue volume produced by sawmills, veneer mills, etc., in a specific State or region that was used for pulp manufacturing.*

[2]*Pulpwood receipts are the volume of wood received by mills in a specific State or region, regardless of the geographic source.*

[3]*Residue is the byproduct from sawmills, veneer mills, cooperage mills, and other wood-using plants that is used for pulping. Residue includes slabs, edgings, veneer cores, sawdust, wood flour, and chips manufactured from slabs, edgings, and veneer cores.*

Table 1.—*Production and imports of pulpwood, Lake States, 1978*

1/ VERTICAL COLUMNS OF FIGURES UNDER BOX HEADING -PRODUCTION BY STATES- PRESENT THE AMOUNT OF PULPWOOD CUT IN EACH STATE.
2/ MOSTLY WESTERN STATES.
3/ PULPWOOD SHIPPED TO MILLS OUTSIDE OF REGION.
4/ PONDEROSA PINE.

Lake States loggers harvested 185,000 cords more in 1978 than in 1977; gains were primarily in hard maple (55,000 cords), red pine (43,000 cords), jack pine (41,000 cords) and aspen (34,000 cords). Elm production fell another 34,000 cords as it continued to decline from the peak level of 1976. Pine pulpwood harvesting was 31,000 cords higher than the previous peak in 1974.

Pulpwood production from whole-tree chips[4] rose to 237,000 cords, up 92,000 cords from 1977. One out of every 20 cords produced was whole-tree chips. Production of whole-tree chips by species group and State was:

State	Softwoods	Aspen	Other hardwoods
	Thousand cords		
Michigan	1.0	62.8	28.5
Minnesota	—	133.8	7.1
Wisconsin	—	3.6	—

Each State gained in production; Wisconsin produced no whole-tree chips in 1977.

[4]*Pulpwood produced from chipping entire trees (all portions of trees above ground, except the stumps).*

Michigan.—Producers increased their output to 1.67 million cords, higher than in any year except 1974. Birch production was the highest recorded—90,000 cords. Other major gains were in aspen and soft maple. Demand for Michigan hardwood residue at pulpmills fell sharply. Increased harvesting was concentrated in the western Upper Peninsula and northern Lower Peninsula. Counties supplying more than 100,000 cords were Iron, Marquette, and Dickinson.

Minnesota.—Minnesota furnished 1.34 million cords of pulpwood as production remained within a narrow range of ± 50,000 cords since 1975. Demand for birch fell to the lowest level since 1969. Other changes within species were nominal. Pulpwood harvesting dropped for the fourth consecutive year in the Aspen-Birch Unit as it increased in 1978 in each of the other Units. Logging greatly intensified in Aitkin and Mille Lacs Counties, apparently in response to firms shifting their procurement areas. St. Louis, Koochiching, and Itasca Counties provided 57 percent of the roundwood to pulp mills.

Wisconsin.—Demand for Wisconsin pulpwood rose to 1.89 million cords, second only to 1974. Pine and birch roundwood and hardwood residue demand reached new highs. Hard maple output rebounded strongly from a low point in 1977. Procurement of elm was moderately lower. Logging increased 70,000 cords in the Northwestern Unit while declining slightly in the Northeastern and Central Units. Top-producing counties were Oneida, Price, Marinette, and Forest.

The distribution of the harvest is shown here in two ways: first, the amount of pulpwood cut relative to the growing stock volume in major pulpwood species (fig. 1); and second, the amount of pulpwood cut relative to commercial forest area (fig. 2). Cutting pressure increased more in Michigan's Western Upper Peninsula than elsewhere.

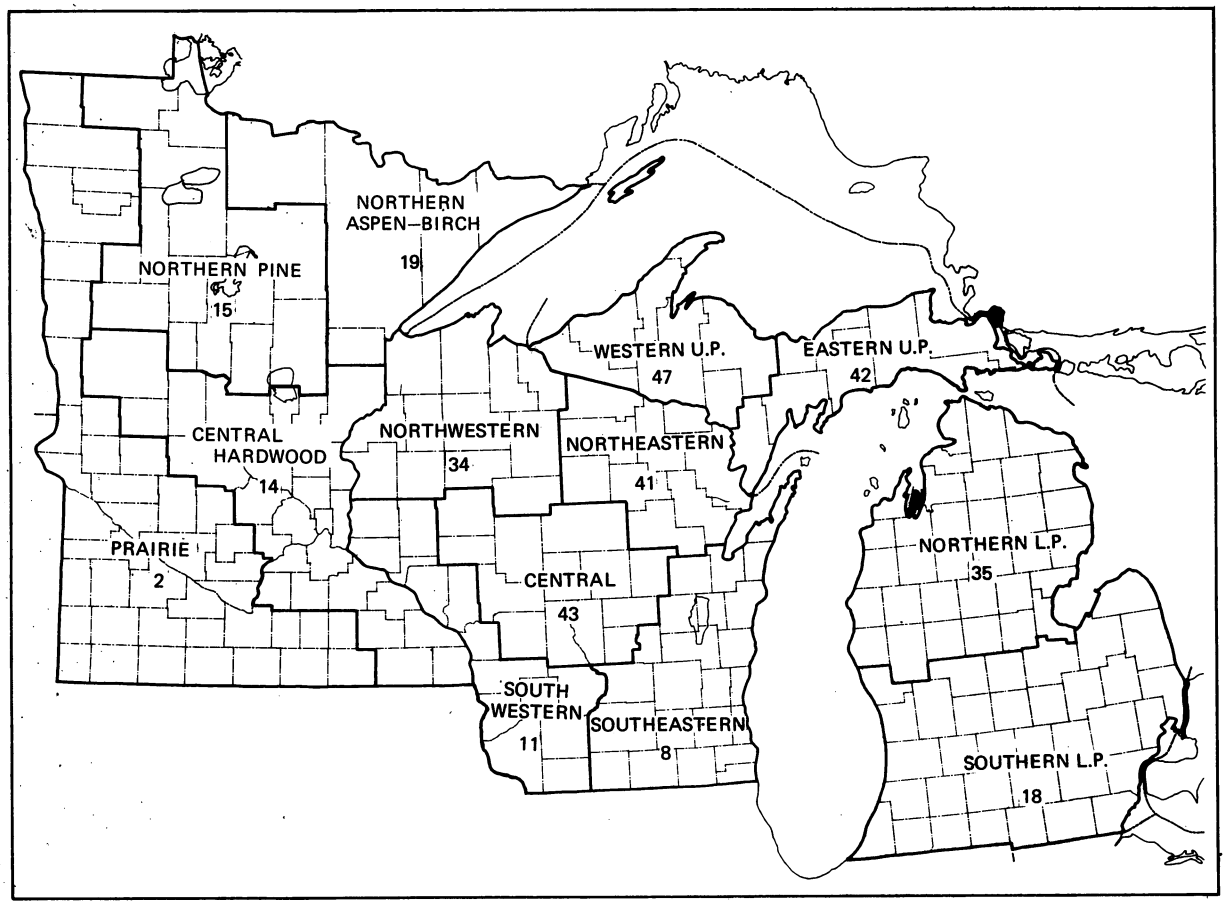

Figure 1.—*Cords of pulpwood bolts and logs harvested per 1,000 cords of merchantable volume in principal pulpwood species by Forest Survey Unit, 1978. Merchantable volume was determined during the last forest inventory in each State. New Minnesota merchantable volume data were used for the first time in preparing this figure.*

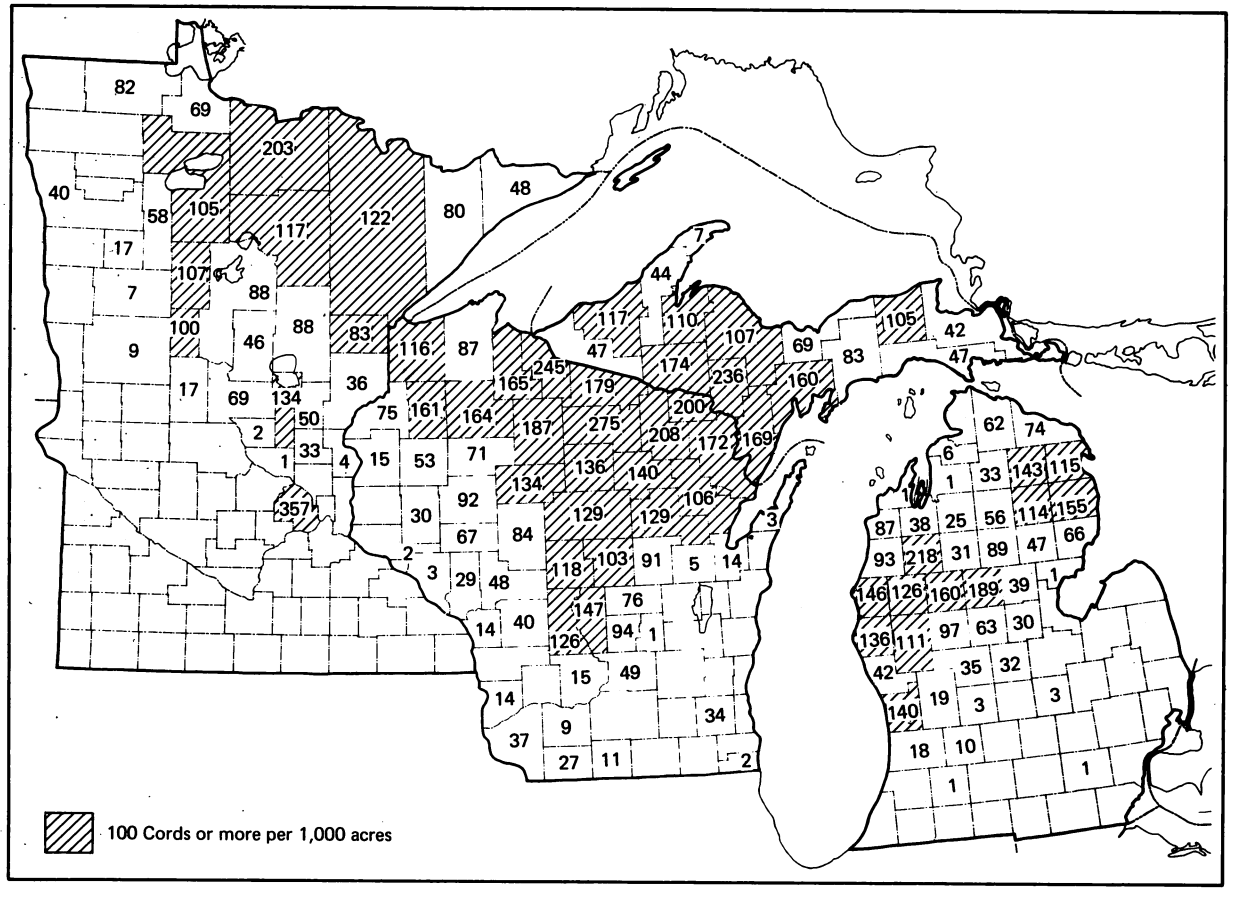

Figure 2.—*Cords of pulpwood cut per 1,000 acres of stocked commercial forest land in principal pulpwood-producing counties, 1978. Acres of stocked commercial forest land were determined during the last forest inventory in each State. New Minnesota forest land data were used for the first time in preparing this figure.*

Receipts

Forty-one Lake States pulpmills procured 5.23 million cords of pulpwood in 1978. Aspen was widely used in 19 of 24 Wisconsin mills and all Michigan and Minnesota mills (table 2). Annual softwood residue receipts, quadrupling since the mid-1960's, surpassed the 1977 all-time high by 9,000 cords. No hardwood roundwood was imported, the first negative report since 1964.

Canada increased softwood residue shipments to the Lake States for the sixth consecutive year; Wisconsin was the principal market. Prior to 1969, Lake States mills purchased no softwood residue from Canada.

Other States shipped 273,000 cords to the Lake States, up 7 percent from 1977. South Dakota, Wyoming, Montana, and Colorado furnished 79 percent of these imports as softwood residue chips.

Michigan.—Pulpwood receipts improved by 99,000 cords to inch ahead of the 1974 record. Pine demand reached a new peak; 63 percent was jack pine, 33 percent was red pine, and the remainder was white pine.

Wisconsin.—Overall receipts climbed 80,000 cords, even though spruce procurement plunged to a fifth consecutive yearly low. Birch and softwood residue deliveries hit new highs. Pine roundwood demand advanced sharply. Out-of-State sources supplied one-third of Wisconsin's total pulpwood requirements.

Table 2.—*Numbers of industrial plants in the Lake States using a particular species or residue for pulping in 1978*

Hardwood residue	16	6	3	7
Total plants[1]	41	8	9	24

[1]Some plants use more than one species, so numbers in columns cannot be added.

Industry Trends and Analysis

Average daily production in the Lake States rose 390 tons from 1977 to 11,200 tons (table 3). One small mill ceased pulping operations during 1978 but is continuing to manufacture paper.

Pulpmills in the Lake States will soon be competing for aspen with waferboard plants since they use similar kinds of boltwood. Four new waferboard plants have been announced for Minnesota and another opened in Wisconsin in 1979. A large expansion is planned at another Minnesota waferboard plant. Several firms are looking for other waferboard opportunities in the Lake States.

These new plants will have a direct impact on the forest resource. Unlike many particleboard plants in the West and South, Lake States waferboard plants will use roundwood rather than mill residue.

Aspen is the preferred species for waferboard but others are likely to supplement aspen. Demand for Lake States aspen in waferboard manufacturing may increase by 600,000 to 800,000 cords annually by 1982 or 1983—30 to 40 percent of the current aspen used for pulpwood. As aspen demand grows, procurement patterns will change. Delivered prices for aspen will rise in some areas (particularly in Minnesota), and average aspen haul distance to mills is likely to increase. Aspen harvesting will probably expand significantly in "fringe" counties, that is, those counties bordering the current major aspen procurement areas.

Mills capable of substituting other species for aspen should have wood cost advantages and fewer wood supply problems compared to those that cannot substitute.

Pulpmills requiring additional supplies of softwoods can obtain some from aspen stands harvested primarily for waferboard bolts because 10 to 20 percent of the volume in the aspen type is softwood.

Minnesota contains large areas of overmature aspen subject to pestilence and disease. If these stands are properly harvested, they can be regenerated to aspen or converted to other species to improve production. Opportunities for aspen forest management by harvesting overmature stands appear excellent.

CENTRAL STATES

Production

Pulpwood production dropped slightly in 1978 to 430,000 cords (table 4). Hard hardwood production was the lowest since 1959. However, after three straight years of record low harvests (since 1955) of soft hardwoods, Central States loggers reversed the trend by raising the soft hardwood output by 14,000 cords. Pulpwood markets were relatively stable for wood residue generated at Central States wood-using firms.

Exports from the Central States were firm although off from the record level of 1977. Half of the total production was exported to Michigan, Minnesota, Ohio, and Kentucky. More than three-fourths of the wood exports was hardwood residue, chiefly from sawmills in Indiana, Missouri, and Illinois.

Indiana, the leading producer, had a record output of 190,000 cords; the previous peak was 172,000 cords in 1976. Most of the increase was hardwood residue. Indiana production has been in an upward trend from a plateau established in the 1961-1965 period. Output fell in each of the other Central States.

Loggers cut pulpwood in 79 counties: 26 in Illinois, 20 in Indiana, 20 in Missouri, and 13 in Iowa (fig. 3).

1/ FACTORS USED IN CONVERTING TO STANDARD GREEN CORDS (128 CU. FT.) WERE:
4,500 POUNDS OF SOFT HARDWOOD ROUNDWOOD;
5,000 POUNDS OF HARD HARDWOOD OR CONIFEROUS ROUNDWOOD;
4,100 POUNDS OF SOFTWOOD CHIPS (GREEN);
4,400 POUNDS OF HARDWOOD CHIPS (GREEN);
2,500 POUNDS OF CHIPS (ALL SPECIES,DRY).

2/ VERTICAL COLUMNS OF FIGURES UNDER BOX HEADING--PRODUCTION BY STATES--PRESENT THE AMOUNT OF PULPWOOD CUT IN EACH STATE.

3/ COMBINED TO PREVENT DISCLOSURE OF INDIVIDUAL MILL RECEIPTS.

4/ PULPWOOD SHIPPED TO MILLS OUTSIDE THE REGION.

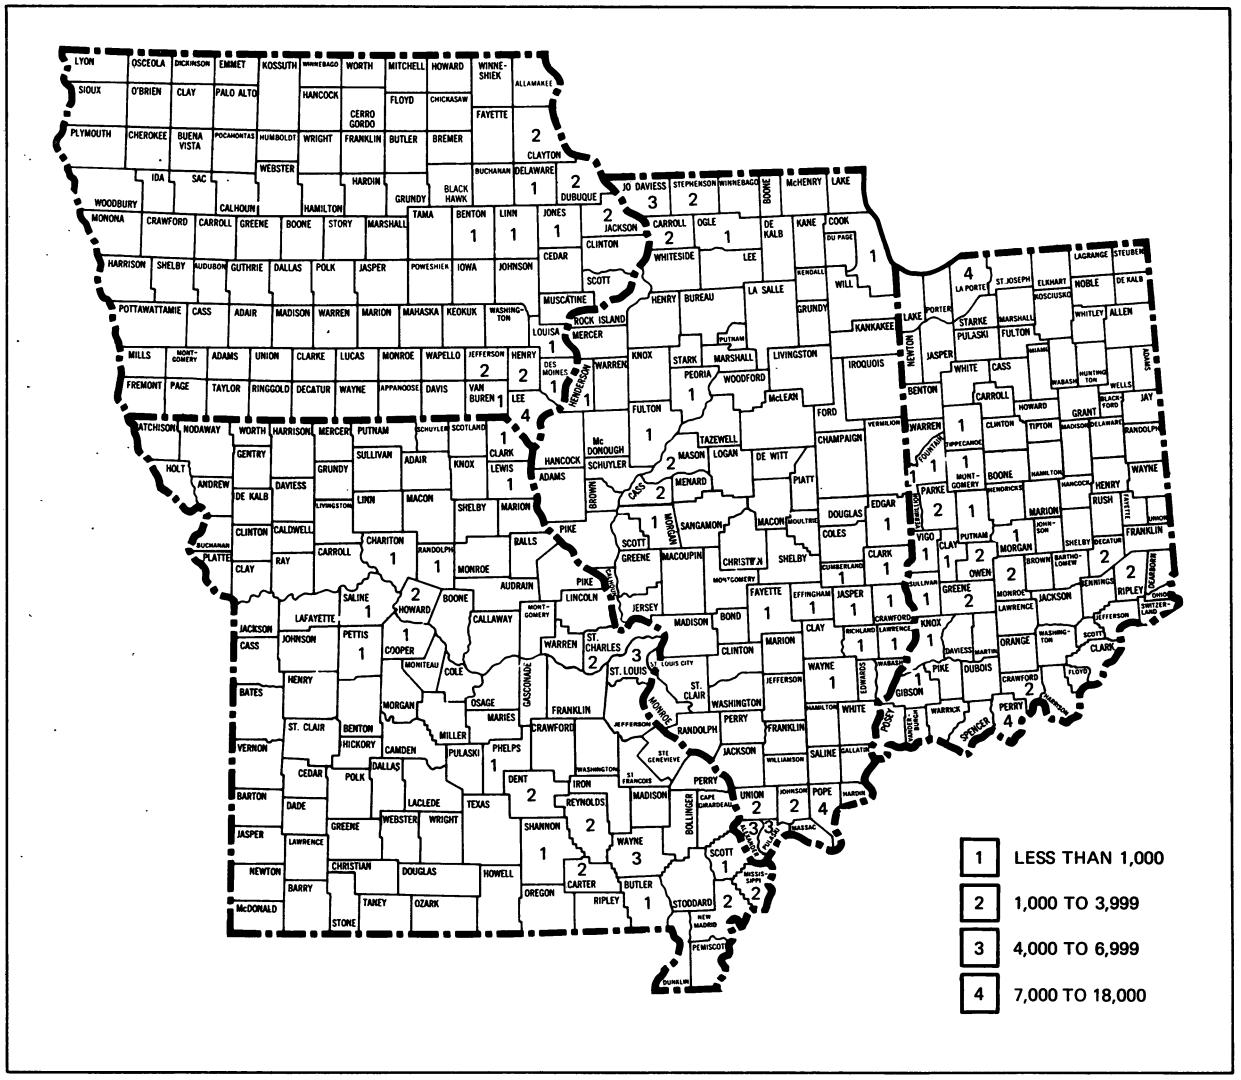

Figure 3.—*Harvest of pulpwood bolts in the Central States by counties, in standard cords, 1978.*

Logging areas expanded in northwestern Illinois, East Central Iowa, and southeastern Missouri and contracted in northeastern Illinois and northwestern Indiana.

Receipts

Twelve Central States pulpmills received 249,000 cords of pulpwood for a nominal gain over 1977. Soft hardwood receipts advanced to 65,000 cords while receipts in all other roundwood and residue groups declined. Only 15 percent of the wood was imported. All imported hardwood residue came from Lake States wood-using mills. Softwood residue imports were delivered from 14 widely scattered States.

Industry Trends and Analysis

Average daily pulp production in the Central States climbed from 1,100 tons to 1,150 tons (table 5). No mills changed ownership and no major mill capacity changes or new mill construction were announced.

Table 5.—*Active woodpulp mills in the Central States by location, type of pulp produced, and average daily production, 1978*

1/ LOCKWOOD'S DIRECTORY OF THE PAPER AND ALLIED INDUSTRIES-1979.

Pulpwood exports from the Central States are as important to producers as pulpwood produced and used in the Central States. Until 1975, when a relatively large Illinois pulpmill converted from pulpwood use to recycled paper, the dominant market for Central States pulpwood was within the Central States:

Year	Destination of Central States pulpwood: Central States	Other States
	Thousand cords	
1965	221	10
1967	245	7
1969	336	40
1971	290	131
1973	313	141
1975	210	197
1977	209	236
1978	211	219

Exports constituted less than one-fifth of the market before 1970. Then exports advanced to more than 200,000 cords by 1976 as markets opened up at new pulpmills contiguous to the area. Pulpwood produced and used in the Central States increased to more than 300,000 cords by 1968, then plummeted to about the 1965 level in 1975, where it has remained. Pulpmills near the Central States are expected to continue providing markets for at least half, and perhaps more, of the Central States pulpwood output.

☆ U.S. Government Printing Office: 1980—669-259/57 Region No. 6

Blyth, James E., and W. Brad Smith.
1980. Pulpwood production in the north central region by county, 1978. U.S. Department of Agriculture Forest Service, Resource Bulletin NC-50, 23 p. U.S. Department of Agriculture Forest Service, North Central Forest Experiment Station, St. Paul, Minnesota.

Discusses 1978 production and receipts and recent production for other years in the Lake and Central States. Shows Michigan, Minnesota, and Wisconsin production by species for each county and compares production by Forest Survey Unit with that of previous years. Presents 1978 production and receipts data for Illinois, Indiana, Iowa, and Missouri, and shows four production classes by county.

KEY WORDS: roundwood, residue, receipts, Lake States, Central States.

Blyth, James E., and W. Brad Smith.
