Pulpwood Production in the North-Central Region by County, 1985

James E. Blyth and W. Brad Smith

HIGHLIGHTS

Lake States

Pulpwood production fell 5 percent to 6.84 million cords in 1985. Hardwood pulpwood output (production) dropped 287 thousand cords and softwood output declined 61 thousand cords. Eight percent of the total production was whole-tree chips; aspen remained the preferred species. Production of pulpwood fell 8 percent for pulp mills and rose 5 percent for flakeboard mills. Output of pulpwood declined 13 percent in Minnesota, 2 percent in Wisconsin, and 1 percent in Michigan. For the third consecutive year, the Michigan aspen harvest reached a new high. Similarly, the Wisconsin aspen harvest climbed to a third consecutive record. In Minnesota, 3 out of every 4 cords of roundwood cut were aspen.

Softwood residue imports to the Lake States from other States (primarily South Dakota and Wyoming) were 125 thousand cords. Twenty-one percent of Wisconsin's pulpwood requirements came from out of State. Michigan and Minnesota each received less than 5 percent of their pulpwood from out of State.

Central States

Central States pulpwood production rose 2 percent to 402 thousand cords. Output rose in Indiana and Missouri but fell in Illinois and Iowa. Seventy-two out of every 100 cords were residue from wood-using mills. Indiana accounted for 56 percent of the output. Two-thirds of the Central States output was exported to five adjacent States.

Pulpwood receipts inched up to 136 thousand cords. Only 3 thousand cords were imported.

PULPWOOD PRODUCTION IN THE NORTH CENTRAL REGION BY COUNTY, 1985

James E. Blyth, *Principal Market Analyst,*
and W. Brad Smith, *Mensurationist*

Pulpwood constitutes more than half the industrial timber products harvested annually in the Lake States (Michigan, Minnesota, and Wisconsin) and is an important product in the Central States (Illinois, Indiana, Iowa, and Missouri).

Current detailed information about pulpwood production¹ is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Also, scientists need current pulpwood information to plan research projects.

Since 1979, we have included logs, bolts, and wood residue used in manufacturing particleboard, waferboard, oriented strand board, and medium density fiberboard in this annual report. Together, these products are called flakeboards. Wood used at flakeboard mills is identical or nearly identical to wood used at pulp mills.

Because flakeboard mills use primarily aspen and wood residue, including them does not distort roundwood use trends for other species nor preclude comparing survey results with 1978 and previous years.

Pulp and flakeboard mills using North Central States timber in 1985 reported their pulpwood receipts² by species groups and counties of origin. This report presents the results of the survey, analyzes the data where appropriate, compares results with 1984 or earlier years, and discusses trends in pulpwood production and use.

The Lake States and Central States are discussed separately because the timber types in each area are

different and less information can be released about the Central States (more detailed data on pulpwood production and receipts in the Central States would reveal the operations of individual mills). This is the 27th annual report of the pulpwood harvest in Lake States counties and the 26th annual report of the Central States harvest.

Several mills buy their pulpwood in green tons rather than in cords. Conversion factors used in the Lake States to convert green tons of pulpwood to standard cord equivalents are shown in the Appendix. Conversion factors used in the Central States are shown in footnote 1 of table 4.

Pulpwood production in Minnesota is completely and accurately shown. However, to prevent disclosure of confidential information about softwood pulpwood use by individual companies, the total quantity of softwood pulpwood imports and exports between Minnesota and Canada is not reported. *Thus, some Minnesota softwood shipped to Canada is shown as remaining and used in Minnesota, and receipts of Canadian softwood in Minnesota are understated.*

LAKE STATES

Production

Pulpwood production dropped from a record 7.19 million cords³ in 1984 to 6.84 million cords in 1985, a decline of 5 percent (table 1). Of each 100 cords produced, 92 cords were roundwood (including chips from roundwood); the remainder was residue from wood-using plants.⁴

¹*Pulpwood production, determined from mill receipts, is the annual volume of pulpwood cut in a specific county or region, plus the annual wood residue volume produced by sawmills, veneer mills, etc., in a specific State or region, that was used for pulp, particleboard, waferboard, oriented strand board, or medium density fiberboard.*

²*Pulpwood receipts are the volume of wood received by mills in a specific State or region, regardless of the geographic source.*

³*All references to cords are in standard cords. A standard cord is 128 cubic feet of wood, bark, and air space.*

⁴*Residue is the byproduct from sawmills, veneer mills, cooperage mills, and other wood-using mills that is used for pulping and flakeboard. Residue includes slabs, edgings, veneer cores, sawdust, wood flour, and chips manufactured from slabs, edgings, and veneer cores.*

Table 1.--Production and imports of pulpwood, Lake States, 1985

^{1/}Vertical columns of figures under the box heading "Production by States", present the amount of pulpwood cut in each State.

^{2/}Mostly western States.

^{3/}Pulpwood shipped to mills outside of region.

^{4/}Ponderosa pine.

Major species harvested were aspen (3,411,000 cords), jack pine (559,000 cords), red pine (292,000 cords), balsam fir (286,000 cords), and hard maple (280,000 cords). Other primary species, each furnishing more than 200,000 cords, were white birch, soft maple, and spruce.

Hardwood pulpwood production fell 287 thousand cords from a peak in 1984. Hardwood output from roundwood declined 257 thousand cords and output from hardwood mill residue dropped 30 thousand cords. Aspen declined the most in hardwood volume followed by white birch, elm, hard maple, and balsam poplar.

Softwood production declined by 61 thousand cords; all but 2 thousand cords of the decline was in roundwood. Declines were concentrated in red pine, balsam fir, and white pine. Cedar bucked the trend with a 35 thousand cord gain and a record harvest.

Lake States loggers produced 573 thousand cords of whole-tree chips⁵ (WTC), up 5 percent from 1984. WTC accounted for 8 percent of the Lake States pulpwood output. About 1 out of 5 cords produced in Michigan was WTC. Minnesota WTC output plunged to less than one-half the 1984 level due substantially to the partial closure of a mill complex. Wisconsin WTC production rose but remained nominal. Production of WTC by species group and State was:

State	Softwoods	Aspen	Other hardwoods
	------(Thousand cords)-----		
Michigan	85	262	145
Minnesota	--	45	--
Wisconsin	--	31	5

Michigan.—Aspen output reached a new high for the third consecutive year. Nearly three-fifths of the aspen was cut in the Northern Lower Peninsula. Overall pulpwood production sagged 1 percent to 2.38 million cords. Pine harvesting was higher than in any year since the peak in 1979. Marquette, Delta, Iron, Menominee, and Dickinson Counties were the leading roundwood producers.

Minnesota.—Minnesota's production plunged 13 percent to 1.88 million cords after 3 record setting years. Three out of four cords of roundwood were aspen; the aspen harvest fell 11 percent. The pine pulpwood harvest was the lowest recorded and the spruce harvest was the lowest recorded except for 1983. Five counties—St. Louis, Itasca, Koochiching, Beltrami, and Cass—furnished 68 percent of the roundwood.

⁵*Pulpwood produced from chipping entire trees (all portions of trees above ground, except the stumps).*

Wisconsin.—Wisconsin producers supplied 2.59 million cords of pulpwood, down 2 percent from 1984. The aspen harvest rose slightly, setting a third consecutive record above 1 million cords. Gains and losses were small for each major pulpwood species group. Top-producing counties were Bayfield, Oneida, Marinette, Douglas, and Forest.

In this report, we show the distribution of the harvest in two ways: first, the amount of pulpwood cut relative to the growing-stock volume in each of five major pulpwood species (fig. 1); and, second, the amount of pulpwood cut relative to commercial forest area (fig. 2). The cross-hatched counties in figure 2 produce 150 cords or more per 1,000 acres, rather than 100 cords or more per 1,000 acres as in previous years. For the major supply areas, pulpwood harvesting was most intensive for jack pine in the Northeastern Wisconsin and Western Upper Peninsula of Michigan Survey Units; for red pine in the Central Unit of Wisconsin; for spruce in the Northern Pine Unit of Minnesota and the Northeastern Wisconsin Unit; for balsam fir in the Northeastern Wisconsin Unit; and for aspen in the Northeastern and Northwestern Wisconsin Units, the Northern Pine Unit of Minnesota, and the Northern Lower Peninsula Unit of Michigan.

More than 200 cords of pulpwood were harvested per thousand acres of stocked commercial forest land in the following counties:

Michigan	Minnesota	Wisconsin
Iron	Clearwater	Douglas
Dickinson	Itasca	Bayfield
Menominee	Hubbard	Washburn
Delta		Vilas
Montmorency		Oneida
Mason		Forest
Lake		Florence
Clare		Menominee
Mecosta		Marinette
Isabella		Langlade
		Lincoln
		Taylor

Receipts

Thirty-seven pulp and eleven flakeboard mills received 6.94 million cords of pulpwood in 1985, off 4 percent from 1984. Forty-four of 48 operating mills used aspen, 19 used maple, and 18 used birch (table 2).

Each Lake State furnishes many mills with pulpwood, including mills outside the region. During 1985 Wisconsin supplied 28 mills, Michigan supplied 27 mills, and Minnesota supplied 25 mills.

Figure 1.—Cords of roundwood pulpwood (including chips from roundwood) harvested per 1,000 cords of merchantable volume for each of five principal pulpwood species by Forest Survey Unit, 1985. Merchantable volume was determined during the last forest inventory in each State.

After falling for 4 consecutive years, softwood residue imports from Canada increased in 1985 to 19 thousand cords. These Canadian imports peaked in 1980 at 91 thousand cords after eight successive annual gains. Softwood residue shipments to the Lake States from other areas of the United States dipped slightly to 125 thousand cords; South Dakota and Wyoming were the principal suppliers.

Michigan.—Out-of-State sources supplied only 4 percent of the 2.06 million cords of pulpwood received in Michigan. Hardwood mill residue was the chief import. Receipts of roundwood were highest for aspen, jack pine, soft maple, and red oak.

Wisconsin.—Twenty-one percent of the 3.10 million cords received at 24 Wisconsin mills came from out-of-State. Michigan furnished 391 thousand cords, Minnesota 105 thousand cords, other (primarily western)

States 127 thousand cords, and Canada 16 thousand cords. Principal imports were aspen, softwood mill residue, jack pine, and spruce. Wisconsin mills imported three-fourths of their softwood residue.

Minnesota.—Minnesota pulpwood receipts are not fully reported (see earlier explanation).

Industry Trends and Analysis

Pulp mills

Average daily pulp production inched up less than 1 percent to 10,940 tons per day in 1985 (table 3). A large new Michigan kraft mill began operating in late 1985. At least two mills are expanding their pulping capacity. Imports of eucalyptus pulp in the Lake States displaced some demand for pulpwood. Two small mills closed during 1985 in addition to the large mill complex mentioned earlier that partially closed.

(Figure 1 continued)

Lake States pulpwood production for pulp mills in 1983, 1984, and 1985 was:

Species	Production		
	1983	1984	1985
	(Thousand cords)		
Roundwood			
Aspen	2,133	2,273	2,109
Other species	2,618	2,899	2,672
Residue	445	493	452
Total	5,196	5,665	5,233

The 8-percent drop in Lake States pulpwood production for pulp mills compares unfavorably with the 2.3 percent fall in U.S. woodpulp production in 1985.

Flakeboard mills

The first medium density fiberboard mill in the Lake States began operating in Michigan during 1985, and

another waferboard mill in Minnesota also began operating. Annual production capacity of the Lake States flakeboard mills increased to 1,050 million square feet as shown below:

Company	Location	Capacity (Million square feet 3/4-inch basis)
Champion International Corp.	Gaylord, MI	175
Louisiana-Pacific	Newberry, MI	50
Weyerhaeuser Co.	Grayling, MI	160
Louisiana-Pacific	Two Harbors, MN	75
Blandin Wood Products Co.	Grand Rapids, MN	125
Northwood Panelboard Co.	Bemidji, MN	80
Potlatch Corp.	Bemidji, MN	80
Potlatch Corp.	Cook, MN	80
Louisiana-Pacific	Hayward, WI	130
Rodman Industries	Marinette, WI	30
Weyerhaeuser Co.	Marshfield, WI	65
All companies		1,050

(Figure 1 continued)

Lake States pulpwood production for flakeboard mills in 1983, 1984, and 1985 was:

Species	Production		
	1983	1984	1985
	(Thousand cords)		
Roundwood			
Aspen	1,173	1,284	1,302
Other species	93	158	215
Residue	80	85	93
Total	1,346	1,527	1,610

Lake States pulpwood production for flakeboard expanded 5 percent because additional mills began operating and housing starts remained strong. One flakeboard mill is increasing its capacity.

Paper and paperboard markets have strengthened in 1986 and housing starts are holding up. If recently built pulp and flakeboard mills operate near capacity in 1986, the 1984 Lake States pulpwood production record should be broken in 1986.

CENTRAL STATES

Production

Pulpwood production rebounded 2 percent to 402 thousand cords, (table 4), after falling in 1984 to the second lowest output in 15 years. Seventy-two out of every 100 cords were residue. Demand rose for hard hardwoods and for Central States mill residue, held steady for soft hardwoods, and fell for softwoods. Exports from the Central States (mainly hardwood residue) resumed their long-term uptrend with a 3-percent gain after plummeting 14 percent in 1984. Two-thirds of the pulpwood was shipped to Kentucky, Michigan, Wisconsin, Ohio, and Oklahoma mills.

Indiana, the leading producer, contributed 9 percent more pulpwood in 1985 than in 1984 and was close to its 1983 peak. Illinois production was the lowest since 1958. Output was higher in Missouri and nominally lower in Iowa.

(Figure 1 continued)

Loggers harvested pulpwood in 21 Illinois counties, 17 Missouri counties, 16 Indiana counties, and 7 Iowa counties (fig. 3). Producing areas expanded in east central Illinois and southeast Missouri and contracted in southeast Iowa.

Receipts

Three Central States pulp mills received 136 thousand cords in 1985 compared to 135 thousand cords in 1984. Higher receipts of hardwood residue from wood-using mills more than offset the drop in hardwood roundwood receipts. No softwoods were used for pulp in the Central States for the third time in the last 4 years. Only 3 thousand cords were imported.

Industry Trends and Analysis

Average daily pulp production remained at 470 tons (table 5). No changes in average daily production are anticipated.

Mills in adjacent States will probably continue to be the principal markets for Central States pulpwood. Central States pulp mills that closed during the last decade are likely to remain closed.

Assuming that no more Central States mills close, annual pulpwood production will probably remain within 12 percent of 400,000 cords during the next 3 years.

(Figure 1 continued)

Figure 2.—Cords of pulpwood cut per 1,000 acres of stocked commercial forest land in principal pulpwood-producing counties, 1985. Acres of stocked commercial forest land (stocking of trees greater than 16.7 percent) were determined during the last forest inventory in each State. Locations of active pulp and flakeboard mills are shown.

Table 2.—Numbers of industrial plants in the Lake States using a particular species or residue for pulping and flakeboard in 1985

^{1/} Factors used in converting to standard green cords (128 cu.ft. including bark and air space) were:

- 4,266 pounds of softwood roundwood;
- 4,795 pounds of soft hardwood roundwood;
- 5,394 pounds of hard hardwood roundwood;
- 4,100 pounds of softwood chips (green mill residue);
- 4,400 Pounds of hardwood chips (green mill residue);
- 2,500 Pounds of chips (all species, dry mill residue).

^{2/} Vertical columns of figures under box heading "Production by States" present the amount of pulpwood cut in each State.^{3/} Combined to prevent disclosure of individual mill receipts.^{4/} Pulpwood shipped to mills outside the region.
