FOREWORD

In this bulletin we discuss recent Michigan forest industry trends and report the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Michigan in 1988. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study and to the Michigan Department of Natural Resources foresters who canvassed these respondents. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw log volume reported in Scribner Decimal C scale by sawmills, a multiplier of 1.04 to all veneer log volume reported in Scribner Dec. C scale by veneer mills, a multiplier of 1.38 to all saw log volume reported in Doyle scale by sawmills, and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last published report from a detailed study of all industrial roundwood output in Michigan came out in 1984. Most comparisons in this report are with the 1984 study results. Quantities shown may vary slightly from one table to another because of rounding differences, but these differences are insignificant.

Michigan Timber Industry—An Assessment of Timber Product Output and Use, 1988

W. Brad Smith, Anthony K. Weatherspoon, and John Pilon

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY—INDUSTRIAL ROUNDWOOD

In terms of volume of wood used, pulp mills dominate Michigan forest industry, but sawmills far outnumber any other mill category. The total number of mills of all types operating in Michigan dropped to 293 in 1975 and then grew back to 373 by 1988. Although the primary wood-using industry is scattered throughout the State, major mills are concentrated in the northern two-thirds of Michigan. Michigan is divided into four Forest Survey Units (fig. 1):

W. Brad Smith, Principal Mensurationist, received a B.S. degree in Forestry and an M.S. degree in forest management from Purdue University. He joined the Forest Service in May 1977, and has been working with North Central's Forest Inventory and Analysis Unit since October, 1977.

Anthony Weatherspoon, Utilization and Marketing Unit Leader, received a B.S. degree in wood science and technology from Colorado State University. After persuing graduate studies in Wood Science at Colorado State he was employed by St. Regis Paper company in 1978. He joined the Michigan Department of Natural Resources in 1985 as the Unit Leader for Marketing and Utilization.

John Pilon, Forest Products Specialist, received a B.S. degree in forestry from Michigan Technological University. He joined the Michigan Department of Natural Resources in 1978 and has been working in the DNR Forest Development Section since 1986.

- Industrial roundwood production rose from 284.2 million cubic feet in 1984 to 355.2 million cubic feet in 1988. Annual production increases averaged 7 percent for softwoods and 9 percent for hardwoods.
- Pulpwood accounted for 59 percent of the industrial roundwood harvest compared to 61 percent in 1984.
- Industrial fuelwood production has more than doubled since 1984 and now comprises 6 percent of total roundwood production.
- Three species (aspen, hard maple, and red oak) supplied 51 percent of the growing-stock harvest.
- Log and bolt receipts at active mills (excluding fuelwood and receipts at treating plants) were 310.4 million cubic feet, up 26 percent from 1984. Hardwoods accounted for most of the increase.

PULPWOOD

- Michigan produced a record high 2.92 million cords of pulpwood (including residues) in 1988 (fig. 2). This volume was 6 percent higher than in 1986 when production was 2.81 million cords based on the North Central Station's annual study of pulpwood production.
- Aspen constituted 38 percent of the roundwood cut for pulpwood. Although aspen demand continues to be high, its share of the Michigan pulpwood market is declining in favor of birch and other hardwood species.

Figure 1.—Forest Survey Units in Michigan.

Figure 2.—Pulpwood production for all species and aspen in Michigan for selected years.

- Michigan pulp mills procured all but 9 percent of their wood requirements within the State. Hardwood mill residue was the principal import. Receipts were strong for aspen, jack pine, red oak, hard maple, and soft maple.
- About 4 out of 5 cords of Michigan pulpwood cut in 1988 remained in the State. Most (95 percent) of the exports went to Wisconsin. Principal exports were aspen, hard maple, jack pine, and spruce.
- Although aspen pulpwood production has more than doubled in the last 30 years, pulpwood production from other species has more than tripled.

SAW LOGS

- Michigan loggers harvested 654 million board feet of saw logs in 1988, up 124 million board feet from 1984. Seventy-nine percent was hardwoods.
- Principal saw log species were aspen, red oak, hard maple, red pine, and soft maple. Red pine saw log production has increased nearly fivefold since 1984.

Figure 3.—Saw log removals in Michigan by species group, 1984 and 1988.

- Six percent of the saw log volume, primarily aspen and hard maple, was shipped to Wisconsin and Indiana.
- Major production gains since 1984 were in red pine (68 million board feet), aspen (28 million board feet), soft maple (17 million board feet), red oak (16 million board feet), and ash (13 million board feet).
- Leading saw log producing counties (with more than 20 million board feet each) were Baraga, Marquette, Iron, Newaygo, and Lake. Nineteen other counties each cut more than 10 million board feet.
- In 1988, 325 active (operating) sawmills received 629 million board feet of saw logs; in 1984, 275 sawmills received 494 million board feet of saw logs.
- Michigan imported a total of 14 million board feet of saw logs from Indiana, Wisconsin, and Ohio. Major import species were red oak, aspen, and hard maple.

VENEER LOGS

- Michigan loggers cut 36.2 million board feet of veneer logs, 14 percent more than in 1984.
- Of the 36.2 million board feet of veneer logs cut in 1988 in Michigan, 51 percent remained in the State, 35 percent was shipped to Wisconsin, 8 percent was shipped to Indiana, and the remainder was sent to Ohio, Iowa, other States, and Canada.
- Hard maple was the primary veneer species cut in Michigan followed by red oak, aspen, yellow birch, white oak, ash, paper birch, and basswood. Red oak and hard maple were the chief exports from Michigan.

OTHER PRODUCTS

- Other industrial roundwood products (7 percent of all industrial roundwood) cut in Michigan in 1988 were poles, commercial posts, industrial fuelwood, charcoal wood, cabin logs, and shingle bolts.
- Industrial fuelwood accounted for 85 percent (327 thousand cords) of these other products. Twenty-seven percent of the fuelwood was softwoods.
- Commercial posts (2.7 million) constituted another 11 percent of the other products; cedar was the leading post species. Seventy-eight percent of the posts were cut in the Eastern Upper Peninsula.

Residential fuelwood is a major nonindustrial product in Michigan. The results of a residential fuelwood study conducted in 1986 are available in a separate Station publication.

TIMBER REMOVALS

- Timber removals from growing stock on timberland for industrial roundwood was 326.4 million cubic feet in 1988.
- Total removals of all material for roundwood from timberland was 434.1 million cubic feet. Eighteen percent (79 million cubic feet) of this total was left in the woods as logging residue (fig. 4).

Figure 4.—Distribution of material from harvested timberland for industrial roundwood in Michigan, 1988.

- Major species harvested in both growing stock and sawtimber were red and jack pines, aspen, maple, and red oak.

LOGGING RESIDUE

- During 1988 loggers in Michigan generated an estimated 79.0 million cubic feet of logging residue. Logging residue includes all wood fiber left behind from trees cut during logging operations and not subsequently used.
- Aspen and hard maple account for 41 percent of all logging residues.
- Three counties—Marquette, Delta, and Menominee—each produced more than 4 million cubic feet of logging residue. All counties except Keweenaw in the Upper Peninsula had more than 1 million cubic feet of residues.

PRIMARY MILL RESIDUE

- Ninety percent or more of each residue class (coarse, fine, bark) generated at Michigan primary mills was used.

- During 1988, Michigan primary wood-using mills (except the pulp, particleboard, and waferboard mills) generated 873 thousand green tons of coarse residue, 539 thousand green tons of fine residue, and 381 thousand green tons of bark.
- Pulp mills consumed 67 percent of the coarse residue for fiber products, and industry and households consumed 25 percent for fuel.
- Fine residue and bark were used primarily for industrial fuel, soil conditioners, mulch, livestock bedding, and poultry litter.

APPENDIX

STUDY METHODS

Data for this publication came from responses to a mail questionnaire sent to all known primary wood-using mills that use logs and bolts from Michigan. For this study, all major consumers of industrial fuelwood were canvassed with the same questionnaire. The study was a cooperative effort of the Michigan Department of Natural Resources (MDNR) and the North Central Forest Experiment Station (NCFES). All canvassing in Michigan was done by the MDNR using mail and personal contacts; followup of nonrespondents was by mail, telephone, and personal contacts. MDNR utilization and marketing specialists provided estimates based on prior knowledge and contacts for a few Michigan mills that did not furnish complete data.

The NCFES mailed a questionnaire to all out-of-State mills using Michigan roundwood. Follow-up of nonrespondents was by mail and telephone.

Logging utilization factors were used to estimate the logging residue. These factors were determined from earlier Michigan logging studies by the NCFES.

The NCFES edited and compiled the data.

This study was authorized by Public Law 93-378 as amended by PL 94-588 and conducted using a questionnaire approved by the U.S. Office of Management and Budget (OMB). A facsimile of the study questionnaire is provided on the following three pages.

LOGS AND OTHER WOOD PROCESSED IN 1988

MICHIGAN

This form is for reporting the quantities and kinds of logs and other wood processed by this plant in 1988, and the disposition of the wood residues resulting from this operation.

All replies will be held confidential and used only for statistical reports.

☐ Check here if you wish to receive a copy of the report resulting from this study.

DEFINITION OF TERMS

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

Consumption.—The quantity of a commodity, such as saw logs, utilized.

Fine mill residue.—Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest industry land.—Land owned by companies or individuals operating primary wood-using mills.

Forest Survey Unit.—A geographic area (group of counties) used by the Forest Inventory and Analysis Project to report periodic inventories and use of forest resources.

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production.—The quantity of industrial roundwood harvested in a geographic area.

Industrial roundwood receipts.—The quantity of industrial roundwood received by commercial mills in a geographic area regardless of the geographic source.

Logging residue.—The unused portions of trees cut or killed by logging.

National Forest land.—Federal land that has been legally designated as National Forest or purchase units, and other land under the administration of the USDA Forest Service.

Particleboard.—Panel product produced by compressing and bonding small particles of wood. Includes panels made from shavings, flakes, wafers, chips, sawdust, strands, slivers, or wood wool.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Standard cord.—A stack of wood bolts (or the equivalent) encompassing 128 cubic feet of wood, bark, and air space. A cord of pulpwood in the North Central Region is assumed to contain 79 cubic feet of wood and 49 cubic feet of bark and air space.

State land.—Land owned by States or land leased to these governmental units for 50 years or more.

Timberland.—Forest land producing or capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Generally, this includes areas suitable for growing crops of industrial wood in excess of 20 cubic feet per acre annually.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

SOFTWOODS

Eastern white pine	<i>Pinus strobus</i>
Red pine	<i>Pinus resinosa</i>
Jack pine	<i>Pinus banksiana</i>
Spruce	
White spruce	<i>Picea glauca</i>
Black spruce	<i>Picea mariana</i>
Balsam fir	<i>Abies balsamea</i>
Eastern hemlock	<i>Tsuga canadensis</i>
Tamarack	<i>Larix laricina</i>
Northern white-cedar	<i>Thuja occidentalis</i>

HARDWOODS

White oak	
White oak	<i>Quercus alba</i>
Bur oak	<i>Quercus macrocarpa</i>
Chinkapin oak	<i>Quercus muehlenbergii</i>
Swamp white oak	<i>Quercus bicolor</i>
Red oak	
Northern red oak	<i>Quercus rubra</i>
Black oak	<i>Quercus velutina</i>
Pin oak	<i>Quercus palustris</i>
Hickory	
Bitternut hickory	<i>Carya cordiformis</i>
Pignut hickory	<i>Carya glabra</i>
Shagbark hickory	<i>Carya ovata</i>
White birch	<i>Betula papyrifera</i>
Yellow birch	<i>Betula alleghaniensis</i>
Hard maple	
Black maple	<i>Acer nigrum</i>
Sugar maple	<i>Acer saccharum</i>
Soft maple	
Red maple	<i>Acer rubrum</i>
Silver maple	<i>Acer saccharinum</i>
American beech	<i>Fagus grandifolia</i>
Ash	
Black ash	<i>Fraxinus nigra</i>
White ash	<i>Fraxinus americana</i>
Balsam poplar	<i>Populus balsamifera</i>
Aspen	
Bigtooth aspen	<i>Populus grandidentata</i>
Quaking aspen	<i>Populus tremuloides</i>
Eastern cottonwood	<i>Populus deltoides</i>
American basswood	<i>Tilia americana</i>
Black walnut	<i>Juglans nigra</i>
Elm	
American elm	<i>Ulmus americana</i>
Rock elm	<i>Ulmus thomasii</i>
Slippery elm	<i>Ulmus rubra</i>
Other hardwoods	
Sycamore	<i>Platanus occidentalis</i>
Black cherry	<i>Prunus serotina</i>
River birch	<i>Betula nigra</i>
Black locust	<i>Robinia pseudoacacia</i>
Honeylocust	<i>Gleditsia triacanthos</i>
Red mulberry	<i>Morus rubra</i>
Butternut	<i>Juglans cinerea</i>
Black willow	<i>Salix nigra</i>
Boxelder	<i>Acer negundo</i>
Hackberry	<i>Celtis occidentalis</i>

1/ Suitable for chipping such as slabs, edgings, veneer cores, etc.

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

Smith, W. Brad; Weatherspoon, Anthony K.; Pilon, John.

1990. **Michigan timber industry—an assessment of timber product output and use, 1988.** Resour. Bull. NC-121. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 67 p.

Discusses recent Michigan forest industry trends; production and receipts of pulpwood, saw logs, and veneer logs; and production of other timber products in 1988. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of this mill residue.

KEY WORDS: Pulpwood, saw logs, veneer logs, residue.
