FOREWORD

In this bulletin we discuss recent Wisconsin forest industry trends and report the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Wisconsin in 1988. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw log volume reported in Scribner Decimal C scale by sawmills, a multiplier of 1.04 to all veneer log volume reported in Scribner Decimal C scale by veneer mills, a multiplier of 1.38 to all saw log volume reported in Doyle scale by sawmills, and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last published report from a detailed study of all industrial roundwood output in Wisconsin was dated 1986. Most comparisons in this report are with the 1986 study results. Quantities shown may vary slightly from one table to another because of rounding differences, but these differences are insignificant.

Wisconsin Timber Industry—An Assessment of Timber Product Output and Use, 1988

W. Brad Smith and James W. Whipple

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY— INDUSTRIAL ROUNDWOOD

Pulp mills dominate Wisconsin forest industry in terms of volume of wood used; but sawmills far outnumber any other mill category. The total number of mills of all types operating in Wisconsin hit its lowest point in 20 years in 1986 with 502 mills and then increased slightly to 512 active mills by 1988. Wisconsin is divided into five Survey Units (fig. 1).

- Industrial roundwood production rose from 326.9 million cubic feet in 1986 to 328.7 million cubic feet in 1988. Annual production increases averaged 11 percent for softwoods and 2 percent for hardwoods.
- Pulpwood accounted for two-thirds of the industrial roundwood production in 1988.
- Seven species (aspen, red oak, hard maple, red pine, white birch, jack pine, and soft maple) supplied 82 percent of the total growing-stock harvest in 1988.

W. Brad Smith, Principal Mensurationist, received a B.S. degree in forestry (1975) and an M.S. degree in forest management (1977) from Purdue University. He joined the Forest Service in May 1977, and has been working with North Central's Forest Inventory and Analysis Unit since October 1977.

James W. Whipple, Wood Utilization Specialist, received his B.S. in forestry from Michigan Technological University in 1964. He joined the Wisconsin Department of Natural Resources as a Field Forester in July 1964 and has been a Utilization Specialist since 1970.

- Log and bolt receipts at active mills (excluding residential fuelwood and receipts at treating plants) were 328.7 million cubic feet. Softwood receipts rose more than 19 percent, and hardwood receipts fell 4 percent since 1986.
- Total material harvested from timberland for industrial roundwood (excluding residential fuelwood) was 468 million cubic feet. Growing stock accounted for 67 percent (313 million cubic feet) of this total.

PULPWOOD

- Wisconsin produced a record high 3.08 million cords of pulpwood (including residues) in 1988. This volume was 7 percent higher than the 1987 production of 2.87 million cords, based on the North Central Station's annual study of pulpwood production. Pulpwood comprises all fiber based products made from roundwood, including particleboard, oriented strand board (OSB), waferboard, etc.
- Aspen constituted 42 percent of the roundwood cut for pulpwood (fig. 2). Although aspen demand continues to be high, aspen's share of the Wisconsin pulpwood market remains strong but is declining in favor of jack pine, balsam fir, and other hardwood species.
- Wisconsin pulp mills procured 14 percent of their wood requirements from out-of-State. Aspen, jack pine, and spruce roundwood as well as hardwood mill residues were primary imports from the Lakes States Region. Softwood mill residues from Western States were also an important resource.

Figure 1.—Forest Survey Units in Wisconsin.

- About 4 out of 5 cords of Wisconsin pulpwood cut in 1988 remained in the State. Two-thirds of the exports went to Michigan, and the remainder went to Minnesota. Principal exports were aspen, white birch, hard maple, hemlock, soft maple, and balsam fir.
- Annual production of aspen, the leading pulpwood species, has more than doubled during the last 30 years.

SAW LOGS

- Loggers delivered 576 million board feet of saw logs to saw mills in 1988, up 66 million board feet from 1986. Thirty percent was red oak.
- Principal saw log species were red oak, aspen, hard maple, white oak, and white pine. Aspen saw log production has increased 24 percent since 1986.

Figure 2.—Pulpwood production of aspen and all species in Wisconsin for selected years.

Figure 3.—Saw log production exported (mills outside Wisconsin), imported, and retained by select species in Wisconsin, 1988.

- Four percent of the saw log volume—primarily pine, aspen, and hard maple—was shipped to Michigan and Minnesota.
- Major production gains since 1986 were in aspen (22 million board feet), white pine (10 million board feet), and red oak (9 million board feet). Hemlock, red pine, ash, white oak, jack pine, and soft maple all showed production gains of more than 4 million board feet. Major declines since 1986 were in elm and hard maple.
- Leading saw log producing counties (with more than 20 million board feet each) were Forest, Oconto, Oneida, and Chippewa. Twenty-one other counties each cut more than 10 million board feet.
- In 1988, 461 active (operating) sawmills received 591 million board feet of saw logs; in 1986, 457 sawmills received 510 million board feet.

- Wisconsin imported a total of 45 million board feet of saw logs from Michigan, Minnesota, Iowa, and Illinois. Major import species were aspen, red oak, and pine (fig. 3).

VENEER LOGS

- Loggers delivered 42.7 million board feet of veneer logs to veneer mills, 63 percent more than in 1986.
- Of the 42.7 million board feet of veneer logs cut in 1988 in Wisconsin, 60 percent remained in the State, 39 percent was shipped to Michigan, and the remainder was sent to Indiana or exported to other States or Canada (fig. 4).

Figure 4.—Veneer production exported (mills outside Wisconsin), imported and retained by select species in Wisconsin, 1988.

- Red oak was the primary veneer species cut in Wisconsin, followed by pine, basswood, hard maple, aspen, white oak, and soft maple. Aspen and pine were the chief exports from Wisconsin to other States or Canada.

OTHER PRODUCTS

- Other industrial roundwood products totalling 4.3 million cubic feet (1 percent of all industrial roundwood) were cut in Wisconsin in 1988. These products include commercial posts, industrial fuelwood, shaving bolts, excelsior bolts, etc.
- Commercial posts (919 thousand pieces) constituted 22 percent of the "other" products; red pine was the leading post species. Seventy-four percent of the posts were cut in the Northwest Unit.

Residential fuelwood is a major nonindustrial product in Wisconsin. The results of a residential fuelwood study conducted in 1981 are available in a separate Station publication.

TIMBER REMOVALS

- Timber removals from growing stock on timberland for industrial roundwood was 312.5 million cubic feet in 1988.
- Total removals of all material for roundwood from timberland was 468.3 million cubic feet. Twenty-nine percent (135.7 million cubic feet) of this total was left in the woods as logging residue (fig. 5).

Figure 5.—Distribution of material harvested from timberland for industrial roundwood in Wisconsin, 1988.

- Major species harvested in both growing stock and sawtimber were red oak, aspen, red pine, and maple.

LOGGING RESIDUE

- During 1988, loggers in Wisconsin generated an estimated 136.7 million cubic feet of logging residue. Logging residue includes all wood fiber left behind from trees cut or killed during logging operations and not subsequently used.

- Aspen and red oak account for 50 percent of all logging residues.
- Seven counties—Forest, Lincoln, Marinette, Oneida, Vilas, Bayfield, and Sawyer—each produced more than 5 million cubic feet of logging residue. All counties in northern and central Wisconsin (Northeast, Northwest, and Central Survey Units) except Eau Claire and Marquette had more than 1 million cubic feet of residues.
- During 1988, Wisconsin primary wood-using mills (except the pulp, particleboard, and waferboard mills) generated 825 thousand green tons of coarse residue, 514 thousand green tons of fine residue, and 367 thousand green tons of bark.
- Pulp mills consumed 68 percent of the coarse residue for fiber products, and industry and households consumed 26 percent for fuel.
- Fine residue and bark were used primarily for industrial fuel, soil conditioners, mulch, livestock bedding, and poultry litter.

PRIMARY MILL RESIDUE

- Ninety-seven percent or more of each residue class (coarse, fine, bark) generated at Wisconsin primary mills was used.

APPENDIX

STUDY METHODS

Data for this publication came from responses to a mail questionnaire (see following pages) sent to all known veneer mills, specialty mills (poles, piling, etc.), and all Wisconsin primary saw mills that processed more than one million board feet of logs and bolts in 1988. Sawmills processing less than one million board feet were contacted to verify ongoing operations, and data from a 1986 study were used for these mills to reduce the data collection workload. The latter mills constituted less than 10 percent of the total production, but re-using the data reduced the workload by approximately 40 percent. The impact of this procedure on sampling error is considered negligible.

The study was a cooperative effort of the Wisconsin Department of Natural Resources

(WDNR) and the North Central Forest Experiment Station (NCFES). All canvassing in Wisconsin was done by the WDNR, using mail and personal contacts; followup of nonrespondents was by mail, telephone, and personal contacts. WDNR utilization and marketing specialists provided estimates based on prior knowledge and contacts for a few Wisconsin mills that did not furnish complete data.

The NCFES mailed a questionnaire to all pulp mills and all out-of-State mills using Wisconsin roundwood. Followup of nonrespondents was by mail and telephone.

Logging utilization factors were used to estimate the logging residue. These factors were determined from earlier Wisconsin logging studies by the NCFES.

The NCFES edited and compiled the data.

LOGS AND OTHER WOOD PROCESSED IN 1988

WISCONSIN

This form is for reporting the quantities and kinds of logs and other wood processed by this plant in 1988, and the disposition of the wood residues resulting from this operation.

All replies will be held confidential and used only for statistical reports.

DEFINITION OF TERMS

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edging, and veneer cores.

Consumption.—The quantity of a commodity, such as saw logs, utilized.

Fine mill residue.—Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest industry land.—Land owned by companies or individuals operating primary wood-using mills.

Forest Survey Unit.—A geographic area (group of counties) used by the Forest Inventory and Analysis Project to report periodic inventories and use of forest resources.

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production.—The quantity of industrial roundwood harvested in a geographic area.

Industrial roundwood receipts.—The quantity of industrial roundwood received by commercial mills in a geographic area regardless of the geographic source.

Logging residue.—The unused portions of trees cut or killed by logging.

National Forest land.—Federal land that has been legally designated as National Forest or purchase units, and other land under the administration of the USDA Forest Service.

Particleboard.—Panel product produced by compressing and bonding small particles of wood. Includes panels made from shavings, flakes, wafers, chips, sawdust, strands, slivers, or wood wool.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Standard cord.—A stack of wood bolts (or the equivalent) encompassing 128 cubic feet of wood, bark, and air space. A cord of pulpwood in the North Central Region is assumed to contain 79 cubic feet of wood and 49 cubic feet of bark and air space.

State land.—Land owned by States or land leased to these governmental units for 50 years or more.

Timberland.—Forest land producing or capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Generally, this includes areas suitable for growing crops of industrial wood in excess of 20 cubic feet per acre annually.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

SOFTWOODS

Jack pine	<i>Pinus banksiana</i>
Red pine	<i>Pinus resinosa</i>
Eastern white pine	<i>Pinus strobus</i>
Spruce	
White spruce	<i>Picea glauca</i>
Black spruce	<i>Picea mariana</i>
Balsam fir	<i>Abies balsamea</i>
Eastern hemlock	<i>Tsuga canadensis</i>
Tamarack	<i>Larix laricina</i>
Northern white-cedar	<i>Thuja occidentalis</i>
Eastern redcedar	<i>Juniperus virginiana</i>

HARDWOODS

White oak	
White oak	<i>Quercus alba</i>
Bur oak	<i>Quercus macrocarpa</i>
Chinkapin oak	<i>Quercus muehlenbergii</i>
Swamp white oak	<i>Quercus bicolor</i>
Red oak	
Northern red oak	<i>Quercus rubra</i>
Black oak	<i>Quercus velutina</i>
Northern pin oak	<i>Quercus ellipsoidalis</i>
Hickory	
Bitternut hickory	<i>Carya cordiformis</i>
Pignut hickory	<i>Carya glabra</i>
Shagbark hickory	<i>Carya ovata</i>
White birch	<i>Betula papyrifera</i>
Yellow birch	<i>Betula alleghaniensis</i>
Hard maple	
Black maple	<i>Acer nigrum</i>
Sugar maple	<i>Acer saccharum</i>
Soft maple	
Red maple	<i>Acer rubrum</i>
Silver maple	<i>Acer saccharinum</i>
American beech	<i>Fagus grandifolia</i>
Ash	
Black ash	<i>Fraxinus nigra</i>
White ash	<i>Fraxinus americana</i>
Green ash	<i>Fraxinus pennsylvanica</i>
Balsam poplar	<i>Populus balsamifera</i>
Aspen	
Bigtooth aspen	<i>Populus grandidentata</i>
Quaking aspen	<i>Populus tremuloides</i>
Eastern cottonwood	<i>Populus deltoides</i>
American basswood	<i>Tilia americana</i>
Black walnut	<i>Juglans nigra</i>

Elm

American elm	<i>Ulmus americana</i>
Rock elm	<i>Ulmus thomasti</i>
Slippery elm	<i>Ulmus rubra</i>
Other hardwoods	
Northern catalpa	<i>Catalpa speciosa</i>
Black cherry	<i>Prunus serotina</i>
River birch	<i>Betula nigra</i>
Black locust	<i>Robinia pseudoacacia</i>
Honeylocust	<i>Gleditsia triacanthos</i>
Red mulberry	<i>Morus rubra</i>
Butternut	<i>Juglans cinerea</i>
Black willow	<i>Salix nigra</i>
Boxelder	<i>Acer negundo</i>
Hackberry	<i>Celtis occidentalis</i>

1/ 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

2/ Less than 500 cords.

3/ Includes logs, bolts, and wood residue used in manufacturing particleboard and waferboard.

2/ Includes only logs and bolts shipped to Canadian mills for processing.

3/ Includes nominal quantities from other countries.

4/ Includes all veneer logs received at Iron Wood Products Co.; such receipts are
not shown before 1974.

1/ Suitable for chipping such as slabs, edgings, veneer cores, etc.

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

Smith, W. Brad; Whipple, James W.

1990. **Wisconsin timber industry—an assessment of timber product output and use, 1988.** Resour. Bull. NC-124. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 68 p.

Discusses recent Wisconsin forest industry trends; production and receipts of pulpwood, saw logs, and veneer logs; and production of other timber products in 1988. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of this mill residue.

KEY WORDS: Pulpwood, saw logs, veneer logs, residue.
