FOREWORD

In this bulletin we discuss recent Michigan forest industry trends and report the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Michigan in 1990. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study and to the Michigan Department of Natural Resources foresters who canvassed these respondents. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw-log volume reported in Scribner Decimal C scale by sawmills, a multiplier of 1.04 to all veneer log volume reported in Scribner Decimal C scale by veneer mills, a multiplier of 1.38 to all saw-log volume reported in Doyle scale by sawmills, and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last report from a detailed study of all industrial roundwood output in Michigan was published in 1988. Most comparisons in this report are with the 1988 study results. Quantities shown may vary slightly from one table to another because of rounding differences, but these differences are insignificant.

Michigan Timber Industry—An Assessment of Timber Product Output and Use, 1990

Ronald L. Hackett and John Pilon

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY—INDUSTRIAL ROUNDWOOD

- Industrial roundwood production declined from 355.2 million cubic feet in 1988 to 347.3 million cubic feet in 1990. Annual production decreased an average of 8 percent for softwoods and less than 1 percent for hardwoods.
- Pulpwood accounted for 62 percent of the industrial roundwood harvest in 1990 compared to 59 percent in 1988.
- Industrial fuelwood production declined 32 percent from 21.9 million cubic feet in 1988 to 14.8 million cubic feet in 1990.
- Three species (aspen, hard maple, and soft maple) supplied 53 percent of the growing stock harvested.
- Log and bolt receipts at active mills (excluding fuelwood and receipts at treating mills) were 328.9 million cubic feet, up 6 percent from 1988. Hardwoods accounted for most of the increase.

Ronald L. Hackett, Research Forester, received a B.S. in forest resources from the University of Minnesota. He joined the Forest Service in December 1974 and has been working with the North Central Station's Forest Inventory and Analysis Unit since.

John Pilon, Forest Products Specialist, received a B.S. in forestry from Michigan Technological University in 1976. He joined the Michigan Department of Natural Resources in 1978 and has been working in the DNR Forest Development Section since 1986.

In terms of volume of wood used, pulp mills dominate Michigan forest industry; but sawmills far outnumber any other mill category. The total number of mills of all types operating in Michigan hit its lowest point in 1975 at 293 mills, but then recovered to 355 active mills by 1990. Although primary wood-using mills are scattered throughout the State, major mills are concentrated in the northern two-thirds of Michigan. The State is divided into four Forest Survey Units (fig. 1).

PULPWOOD

- Michigan's timberland produced 2.98 million cords of pulpwood (including residues) in 1990. This volume was 2 percent higher than the 1988 production of 2.92 million cords. In 1989 the volume of pulpwood harvested was a record high 3.11 million cords, based on the North Central Station's annual study of pulpwood production.
- Aspen was 37 percent of the volume cut for pulpwood in 1990. Aspen demand continues to be high, while birch and other hardwoods continue to gain in use for woodpulp.
- More than 90 percent of Michigan's pulpwood needs were met from within the State. White birch, hard maple, and aspen were the principal imports—mainly from Wisconsin. Receipts for mills in Michigan were strong in aspen, hard maple, white birch, and hardwood residues.
- Eighty-eight percent of Michigan's pulpwood harvested in 1990 remained in the State. Ninety-three percent of the pulpwood exported went to Wisconsin. Principal exports were aspen, jack pine, spruce, and hard maple.

Figure 1.—Forest Survey Units in Michigan.

- Although aspen pulpwood production has remained strong over the last 30 years, other species have also continued to rise to new highs (fig. 2).

Figure 2.— Pulpwood production in Michigan for selected years.

SAW LOGS

- Loggers delivered nearly 625 million board feet of Michigan saw logs to mills in 1990, down 4 percent (29 million board feet) from 1988. Most of the decline (30 million board feet) was in hardwoods. Ash had the largest decrease with 12 million board feet.
- Major saw-log species harvested in 1990 were hard maple, red oak, aspen, red pine, and soft maple. Softwood saw-log production increased 1 percent, while hardwood saw-log production decreased 5.8 percent from 1988 to 1990.
- Seven percent of the saw-log volume—primarily aspen, hard maple, and red oak—was shipped to Wisconsin, Indiana, and other States outside the region.
- Major production gains since 1988 were in hard maple (6 million board feet), white pine (3 million board feet), and basswood (2 million board feet). Major declines since 1988 were in ash and yellow birch (fig. 3).
- Leading saw-log producing counties (more than 20 million board feet each) were Marquette, Iron, Houghton, Newaygo, and Baraga. Nineteen other counties each cut more than 10 million board feet.
- In 1990, 300 active sawmills in Michigan received 625 million board feet of saw logs. In 1988, 325 sawmills received 629 million board feet.
- Michigan imported a total of 8 million board feet of saw logs from Wisconsin, Ohio, Indiana, and Minnesota. Major imported species were red oak, basswood, and hard maple.

Figure 3.— Saw-log production in Michigan by species group, 1988 and 1990.

VENEER LOGS

- Loggers cut 38 million board feet of Michigan veneer logs, up 4 percent from 1988. Of the veneer log and bolt volume, 58 percent remained in Michigan and 42 percent was shipped to Wisconsin, Ohio, Indiana, Iowa, other States, and Canada.
- Hard maple was the primary species cut for veneer logs and bolts in Michigan in 1990, followed by aspen, red oak, and spruce. Hard maple and red oak were the main exports from Michigan to Wisconsin and other States.

OTHER PRODUCTS

- In 1990, 19.4 million cubic feet of other industrial roundwood products was cut in Michigan. These products include industrial fuelwood, commercial posts, cabin logs, shingle bolts, and shaving bolts.

- Industrial fuelwood accounted for 76 percent (221 thousand cords) of these products. Twenty percent of the fuelwood was softwoods.
- Commercial posts (2.5 million) constituted another 13 percent of the other products; cedar was the leading post species. Sixty-two percent of the posts were cut in the Eastern Upper Peninsula.

Residential fuelwood is a major nonindustrial product in Michigan. The results of a 1991 residential fuelwood study will be available in a separate Station publication.

TIMBER REMOVALS

- In the production of Michigan's industrial roundwood harvest, 324.5 million cubic feet of growing stock was removed from timberlands, a 1-percent drop since 1988.
- Total amount of material harvested from timberland for industrial roundwood (exclusive of residential fuelwood) was 428 million cubic feet. Nineteen percent was left in the woods as logging residues (fig. 4). Residue material includes tops, limbs, cull material, and growing-stock material not used for product.

Figure 4.— Distribution of trees and tree material harvested from timberland for industrial roundwood in Michigan, 1990.

- Major species harvested from both growing stock and sawtimber were aspen, hard maple, red oak, soft maple, and red pine.

HARVEST RESIDUE

- During 1990, loggers in Michigan generated an estimated 80.9 million cubic feet of logging residues (not including residues from trees cut on nonforest land). Harvest residue consists of all wood fiber left behind from trees cut or killed during logging operations on timberland and not subsequently used for industrial products.
- Aspen and hard maple accounted for 44 percent of all logging residues in 1990.
- Three counties—Marquette, Delta, and Iron—each produced more than 5 million cubic feet of logging residue. All counties except Keweenaw in the Upper Peninsula had more than 1 million cubic feet of residues.

PRIMARY MILL RESIDUE

- Ninety-six percent or more of each mill residue class (coarse, fine, and bark) generated in Michigan primary mills was used.
- During 1990, Michigan primary wood-using mills (except the pulp, particleboard, and waferboard mills) generated 807 thousand green tons of coarse residue, 503 thousand green tons of fine residue, and 359 thousand green tons of bark.
- Pulpwood mills consumed 59 percent of the coarse mill residue for fiber products, and industry and households consumed 33 percent for fuel.
- Fine mill residue and bark were used primarily for industrial fuel, soil conditioner, mulch, livestock bedding, and poultry litter.

APPENDIX

STUDY METHODS

Data for this publication came from responses to a mail questionnaire sent to all known primary mills that use logs and bolts from Michigan. For this study, all major consumers of industrial fuelwood were canvassed with the same questionnaire. The study was a cooperative effort of the Michigan Department of Natural Resources (MDNR) and the North Central Forest Experiment Station (NCFES). All canvassing in Michigan was done by the MDNR using mail and personal contacts; followup of nonrespondents was by mail, telephone, and personal contacts. MDNR

utilization and marketing specialists provided estimates based on prior knowledge and contacts for a few Michigan mills that did not furnish complete data.

The NCFES mailed a questionnaire to all out-of-State mills that use Michigan roundwood. Followup of nonrespondents was by mail and telephone.

Logging utilization factors were used to estimate the logging residue. These factors were determined from earlier Michigan logging studies by the NCFES.

The NCFES edited and compiled the data.

LOGS AND OTHER WOOD PROCESSED IN 1990

MICHIGAN

This form is for reporting the quantities and kinds of logs and other wood processed by this plant in 1990, and the disposition of the wood residues resulting from this operation.

DEFINITION OF TERMS

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edging, and veneer cores.

Fine mill residue.—Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest Survey Unit.—A geographic area (group of counties) used by the Forest Inventory and Analysis Project to report periodic inventories and use of forest resources.

Harvest residues.—The total unused wood material left after harvesting.

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production.—The quantity of industrial roundwood harvested in a geographic area.

Industrial roundwood receipts.—The quantity of industrial roundwood received by commercial mills.

Logging residue.—The unused portions of the merchantable section of growing-stock trees cut or killed by logging.

Logging slash.—The unused portion of an unmerchantable section of tree cut or killed by logging.

Particleboard.—A generic term for a panel manufactured from lignocellulosic materials—commonly wood—essentially in the

form of particles produced by compressing and bonding small particles of wood. Includes panels made from shavings, flakes, wafers, chips, sawdust, strands, slivers, or wood wool.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Standard cord.—A stack of wood bolts (or the equivalent) encompassing 128 cubic feet of wood, bark, and air space. A cord of pulpwood in the North Central Region is assumed to contain 79 cubic feet of wood and 49 cubic feet of bark and air space. Most industries in Minnesota report cordwood volume in 100-inch cords or Lake States cords. These data are converted to 96-inch standard cord equivalents for this report.

Timberland.—Forest land producing, or capable of producing, crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Generally, this includes areas suitable for growing crops of industrial wood in excess of 20 cubic feet per acre annually.

Veneer log.—A log considered suitable in size and quality for producing veneer-sliced or rotary-cut.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

SOFTWOODS

Eastern white pine *Pinus strobus*
Red pine *Pinus resinosa*
Jack pine *Pinus banksiana*
Spruce

White spruce *Picea glauca*
Black spruce *Picea mariana*
Balsam fir *Abies balsamea*
Eastern hemlock *Tsuga canadensis*
Tamarack *Larix laricina*
Northern white-cedar *Thuja occidentalis*

HARDWOODS

White oak

White oak *Quercus alba*
Bur oak *Quercus macrocarpa*
Chinkapin oak *Quercus muehlenbergii*
Swamp white oak *Quercus bicolor*

Red oak

Northern red oak *Quercus rubra*
Black oak *Quercus velutina*
Pin oak *Quercus palustris*

Hickory

Bitternut hickory *Carya cordiformis*
Pignut hickory *Carya glabra*
Shagbark hickory *Carya ovata*

White birch *Betula papyrifera*

Yellow birch *Betula alleghaniensis*

Hard maple

Black maple *Acer nigrum*
Sugar maple *Acer saccharum*

Soft maple

Red maple *Acer rubrum*
Silver maple *Acer saccharinum*

American beech *Fagus grandifolia*

Ash

Black ash *Fraxinus nigra*
White ash *Fraxinus americana*

Balsam poplar *Populus balsamifera*

Aspen

Bigtooth aspen *Populus grandidentata*
Quaking aspen *Populus tremuloides*

Eastern cottonwood *Populus deltoides*

American basswood *Tilia americana*

Black walnut *Juglans nigra*

Elm

American elm *Ulmus americana*
Rock elm *Ulmus thomasi*

Slippery elm *Ulmus rubra*

Other hardwoods

Sycamore *Platanus occidentalis*
Black cherry *Prunus serotina*

River birch *Betula nigra*
Black locust *Robinia pseudoacacia*
Honeylocust *Gleditsia triacanthos*
Red mulberry *Morus rubra*
Butternut *Juglans cinerea*
Black willow *Salix nigra*
Boxelder *Acer negundo*
Hackberry *Celtis occidentalis*

1/ 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

2/ Less than 500 cords.

2/ Chippable mill residues such as slabs, edgings, etc. Roundwood chips are included in roundwood.

Table 7.-- Pulpwood production from roundwood by species group, Forest Survey Unit, and county, Michigan, 1990

(In standard cords)

1/ Suitable for chipping such as slabs, edgings, veneer cores, etc.

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

The policy of the United States Department of Agriculture Forest Service prohibits discrimination on the basis of race, color, national origin, age, religion, sex, or disability. Persons believing they have been discriminated against in any Forest Service related activity should write to: Chief, Forest Service, USDA, Washington, DC 20250.

Hackett, Ronald L.; Pilon, John.

1993. **Michigan timber industry—an assessment of timber product output and use, 1990.** Resour. Bull. NC-144. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 56 p.

Discusses recent Michigan forest industry trends; production and receipts of pulpwood, saw logs, and veneer logs; and production of other timber products in 1990. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of this mill residue.

KEY WORDS: Pulpwood, saw logs, veneer logs, residue.
