FOREWORD

In this bulletin we discuss recent Wisconsin forest industry trends and report the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Wisconsin in 1990. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw-log volume reported in Scribner Decimal C scale by sawmills, a multiplier of 1.04 to all veneer log volume reported in Scribner Decimal C scale by veneer mills, a multiplier of 1.38 to all saw-log volume reported in Doyle scale by sawmills, and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last report from a detailed study of all industrial roundwood output in Wisconsin was published in 1988. Most comparisons in this report are with the 1988 study results. Quantities shown may vary slightly from one table to another because of rounding differences, but these differences are insignificant.

Wisconsin Timber Industry—An Assessment of Timber Product Output and Use, 1990

Ronald L. Hackett and James W. Whipple

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY—INDUSTRIAL ROUNDWOOD

In terms of volume of wood used, pulp mills dominate Wisconsin's forest industry, but sawmills far outnumber any other category. There were 323 mills of all types operating in Wisconsin in 1990. Wisconsin is divided into five Survey Units (fig. 1).

- Industrial roundwood production rose from 328.7 million cubic feet in 1988 to 342.6 million cubic feet in 1990. Annual production increases averaged 3 percent for softwoods and 2 percent for hardwoods.
- Pulpwood accounted for 66 percent of the industrial roundwood production in 1990.
- In 1990, 83 percent of the total growing-stock removals due to harvest came from aspen, red oak, hard maple, red pine, white birch, jack pine, and soft maple.

Ronald L. Hackett, Research Forester, received a B.S. degree in forest resources from the University of Minnesota. He joined the Forest Service in December 1974, and has been working with the North Central Station's Forest Inventory and Analysis Unit since.

James W. Whipple, Wood Utilization Specialist, received his B.S. in forestry from Michigan Technological University in 1964. He joined the Wisconsin Department of Natural Resources as a field forester in July 1964 and has been in his current position since 1970.

- Log and bolt receipts at active primary mills were 347.5 million cubic feet. Softwood receipts have increased 11 percent and hardwood receipts have increased 4 percent since 1988.
- Total material harvested from timberland for industrial roundwood (excluding residential fuelwood) was 482 million cubic feet. Growing-stock removals accounted for 67 percent (322 million cubic feet) of this total.

PULPWOOD

- Wisconsin produced a record high 3.16 million cords of pulpwood (including mill residues) in 1989. This volume was 2 percent higher than the 1990 production of 3.09 million cords, based on the North Central Station's annual study of pulpwood production. Pulpwood includes all fiber-based products made from roundwood, including paper, particleboard, oriented strand board (OSB), waferboard, and other products.
- Aspen comprises 38 percent of the roundwood cut for pulpwood (fig. 2). Aspen continues to be in high demand, and Wisconsin's pulpwood market remains strong but is slowly declining in favor of pine, birch, and other hardwood species.

Figure 1.—Forest Survey Units in Wisconsin.

Figure 2.—Pulpwood production of aspen and all species in Wisconsin for selected years.

- Pulp mills in Wisconsin obtained 17 percent of their wood needs from out of State. Aspen, spruce, and jack pine roundwood were primary imports from the Lake States region. Softwood residues from the Western States were also an important import.
- Ninety percent of the pulpwood roundwood cut in Wisconsin in 1990 remained in Wisconsin. More than three-quarters of the exports went to Michigan, and the remainder went to Minnesota. The major species exported were aspen, white birch, hard maple, and soft maple.
- The use of white birch for pulpwood in Wisconsin has nearly doubled in the last 10 years.

SAW LOGS

- Loggers delivered 583 million board feet of Wisconsin saw logs to mills in Wisconsin, Michigan, Minnesota, and other States in 1990—up 4 percent (23 million board feet) from 1988. Nearly 30 percent was red oak.
- Major saw-log species harvested in 1990 were red oak, aspen, hard maple, white oak, and red pine. Aspen saw-log production has decreased 11 percent since 1988.
- Two percent of the saw-log volume—primarily red oak, red pine, and basswood—was shipped to Michigan, Minnesota, and other States outside the region.

- Major production gains since 1988 were in ash (16 million board feet), hard maple (10 million board feet), and soft maple (8 million board feet). Red pine was the only softwood species that showed a production gain of more than 4 million board feet. Major declines since 1988 were in aspen and white pine.
- Leading saw-log producing counties (with more than 20 million board feet each) were Forest, Marinette, Oconto, Oneida, and Grant. Twenty-three other counties each cut more than 10 million board feet.
- In 1990, 268 active sawmills in Wisconsin received 619 million board feet of saw logs; in 1988, 255 sawmills received 591 million board feet.
- Wisconsin imported a total of 35 million board feet of saw logs from Michigan, Minnesota, Iowa, and Illinois in 1990. Major imported species were pine, aspen, and red oak (fig. 3).

Figure 3.—Saw-log production exported (mills outside Wisconsin), imported, and retained by select species in Wisconsin, 1990.

VENEER LOGS

- Loggers delivered 44.2 million board feet of Wisconsin veneer logs to mills, 4 percent more than in 1988.

- Of the 44.2 million board feet of veneer logs cut in 1990 in Wisconsin, 61 percent remained in the State, 38 percent was shipped to Michigan, and the remainder was sent to Indiana or exported to other States and Canada.
- Red oak was the primary veneer species cut in Wisconsin, followed by aspen, pine, hard maple, and basswood. Aspen and pine were the main exports from Wisconsin to other States and Canada.
- Wisconsin imported 17 million board feet of veneer logs and bolts from Michigan, Minnesota, Iowa, Illinois, and Canada. The major species imported were hard maple, red oak, and basswood (fig. 4).

Figure 4.—Veneer production exported (mills outside Wisconsin), imported, and retained by select species in Wisconsin, 1990.

OTHER PRODUCTS

- In 1990, 7.4 million cubic feet of other industrial roundwood products were cut in Wisconsin. These products include commercial posts, industrial fuelwood, shaving bolts, excelsior bolts, and other products.
- In this survey, cabin logs for home building were included with industrial poles (electric and telephone); together, they accounted for 19 thousand pieces.

Residential fuelwood is a major nonindustrial product in Wisconsin. The results of a residential fuelwood study conducted in 1981 are available in Blyth, James E.; Bailey, Michael E.; Smith, W. Brad. 1984. Fuelwood production and sources in Wisconsin, 1981. Resour. Bull. NC-75. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 54 p.

TIMBER REMOVALS

- In the production of industrial roundwood in 1990, 322 million cubic feet of growing-stock removals was received from timberland.
- In the production of industrial roundwood that occurred in 1990, 482 million cubic feet was cut. Only 30 percent of this total was left in the woods as logging residues (fig. 5).

Figure 5.—Distribution of material harvested for industrial roundwood in Wisconsin, 1990.

- Major species harvested in both growing stock and sawtimber were aspen, red oak, hard maple, and red pine.

HARVEST RESIDUE

- During 1990, loggers in Wisconsin generated an estimated 139.4 million cubic feet of logging residue; this does not include nonforest removals. Harvest residue consists of all unmerchantable wood fiber not utilized during logging operations on timberland.
- Aspen and red oak accounted for 47 percent of all harvest residues.
- Seven counties—Forest, Langlade, Marinette, Oneida, Vilas, Bayfield, and Sawyer—each produced more than 5 million cubic feet of harvest residue. All the units except the Southeast had counties with more than a million cubic feet of residues.

PRIMARY MILL RESIDUE

- Ninety-six percent or more of each residue class (coarse, fine, bark) generated at Wisconsin primary mills was used.
- During 1990, Wisconsin primary wood-using mills (except the pulp, particleboard, and waferboard mills) generated 868 thousand green tons of coarse residue, 546 thousand green tons of fine residue, and 1,288 thousand green tons of bark.
- Pulpwood mills consumed 61 percent of the coarse residue for fiber products, and industry and households consumed 30 percent for fuel.
- Fine residue and bark were used primarily for industrial fuel, soil conditioner, mulch, livestock bedding, and poultry litter.

APPENDIX

STUDY METHODS

Data for this publication came from responses to a mail questionnaire (see following pages) sent to all known veneer mills, specialty mills (poles, piling, etc.), and all Wisconsin primary sawmills that processed more than 1 million board feet of logs and bolts in 1990. Sawmills processing less than 1 million board feet were contacted to verify ongoing operations, and data from a 1988 study were used to reduce the data collection workload. The latter mills constituted less than 10 percent of the total production, but re-using earlier data from them reduced the workload by approximately 40 percent. The impact of this procedure on sampling error is considered negligible.

The study was a cooperative effort of the Wisconsin Department of Natural Resources (WDNR) and the North Central Forest Experiment Station (NCFES). All canvassing in Wisconsin was done by the WDNR using mail

and personal contacts; followup of nonrespondents was by mail, telephone, and personal contacts. WDNR utilization and marketing specialists provided estimates based on prior knowledge and contacts for a few Wisconsin mills that did not furnish complete data.

The NCFES mailed a questionnaire to all pulp mills and all out-of-State mills using Wisconsin roundwood. Followup of nonrespondents was by mail and telephone.

Logging utilization factors were used to estimate the logging residue. These factors were determined from earlier Wisconsin logging studies by the NCFES.

The NCFES edited and compiled the data.

LOGS AND OTHER WOOD PROCESSED IN 1990

WISCONSIN

This form is for reporting the quantities and kinds of logs and other wood processed by this plant in 1990, and the disposition of the wood residues resulting from this operation.

DEFINITION OF TERMS

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edging, and veneer cores.

Consumption.—The quantity of a commodity, such as saw logs, utilized.

Fine mill residue.—Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest Survey Unit.—A geographic area (group of counties) used by the Forest Inventory and Analysis Project to report periodic inventories and use of forest resources.

Growing-stock removals.—The growing-stock volume removed from inventory by harvesting. Consisting of logging residue and the growing-stock volume of products.

Harvest residues.—The total unused wood material left after harvesting.

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production.—The quantity of industrial roundwood harvested in a geographic area.

Industrial roundwood receipts.—The quantity of industrial roundwood received by commercial mills.

Logging residue.—The unused growing-stock or sawtimber volume of trees generated by logging and left in the woods.

Logging slash.—The unused portion of unmerchantable section of the tree generated by logging.

Particleboard.—Panel product produced by compressing and bonding small particles of wood. Includes panels made from shavings, flakes, wafers, chips, sawdust, strands, slivers, or wood wool.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Production (timber).—The harvest of timber products. Also called industrial roundwood production, referring to logs, bolts, or other round sections cut from trees for industrial or consumer use.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Standard cord.—A stack of wood bolts (or the equivalent) encompassing 128 cubic feet of wood, bark, and air space. A cord of pulpwood in the North Central Region is assumed to contain 79 cubic feet of wood and 49 cubic feet of bark and air space.

Timberland.—Forest land producing, or capable of producing, crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Generally, this includes areas suitable for growing crops of industrial wood in excess of 20 cubic feet per acre annually.

Veneer log (bolt).—A log or bolt considered suitable in size and quality for producing veneer-sliced or rotary-cut.

1/ 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

2/ Less than 500 cords.

3/ Includes logs, bolts, and wood residue used in manufacturing particleboard and waferboard after 1979.

1/ Suitable for chipping such as slabs, edgings, veneer cores, etc.

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

Hackett, Ronald L.; Whipple, James W.

1993. **Wisconsin timber industry—an assessment of timber product output and use, 1990.** Resour. Bull. NC-147. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 57 p.

Discusses recent Wisconsin forest industry trends; production and receipts of pulpwood, saw logs, and veneer logs; and production of other timber products in 1990. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of this mill residue.

KEY WORDS: Pulpwood, saw logs, veneer logs, residue.

Our job at the North Central Forest Experiment Station is discovering and creating new knowledge and technology in the field of natural resources and conveying this information to the people who can use it. As a new generation of forests emerges in our region, managers are confronted with two unique challenges: (1) Dealing with the great diversity in composition, quality, and ownership of the forests, and (2) Reconciling the conflicting demands of the people who use them. Helping the forest manager meet these challenges while protecting the environment is what research at North Central is all about.
