FOREWORD

This bulletin discusses recent Missouri forest industry trends and contains the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Missouri in 1991. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study and to the Missouri Department of Conservation foresters who canvassed these respondents. Their cooperation is greatly appreciated.

All references to red oak in this paper are for the red oak group, which excludes black oak but includes northern red oak, cherrybark oak, shumard oak, scarlet oak, southern red oak, shingle oak, blackjack oak, water oak, and pin oak. Similarly, all references to white oak are for the white oak group, which includes white oak, swamp white oak, bur oak, swamp chestnut oak, chinkapin oak, overcup oak, and post oak.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.38 to all saw-log and handle bolt volumes reported in Doyle scale by sawmills and handle mills and by applying a multiplier of 1.14 to all veneer log and cooperage log volumes reported in Doyle scale by veneer and cooperage mills. To convert to Doyle log scale, multiply the International scale volume for saw logs and handle bolts by 0.7246, and multiply the International scale volume for veneer logs and cooperage logs by 0.8772.

The last study of industrial roundwood output in Missouri was conducted in 1987. Data in this report are compared with the 1987 study results. Quantities shown may vary slightly from one table to another because of rounding differences, but these differences are usually insignificant.

Missouri Timber Industry—An Assessment of Timber Product Output and Use, 1991

Ronald L. Hackett, Shelby G. Jones, and Ronald J. Piva

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY—INDUSTRIAL ROUNDWOOD

In 1991, 471 primary wood-using mills were operating in Missouri. Saw mills dominate Missouri's forest industry in terms of volume of wood used. Missouri's production of industrial roundwood is reported by the five Forest Survey Units in the State (fig. 1).

- Industrial roundwood production rose from 100 million cubic feet in 1987 to 121 million cubic feet in 1991. Roundwood production increased 21 percent for hardwoods and 30 percent for softwoods.
- Saw logs accounted for 78 percent of the industrial roundwood harvest in 1991 compared to 90 percent of the harvest in 1987 (fig. 2).

Ronald L. Hackett, Research Forester, received a B.S. degree in forest resources from the University of Minnesota. He joined the Forest Service in December 1974, and has been working with the North Central's Forest Inventory and Analysis Unit since.

Shelby G. Jones, Staff Supervisor - Utilization and Measurements, received a B.S. degree in Forestry from the University of Missouri in 1966. He joined the Missouri Department of Conservation in October 1966, and has been assigned to various field and staff positions since that time. He has supervised the Forest Products Utilization and Marketing program since 1978.

Ronald J. Piva, Forester, received a B.S. degree in forest management from the University of Missouri-Columbia. He joined the Forest Service in 1989, and has been working with the North Central's Forest Inventory and Analysis Unit since.

- Saw-log production rose from 503 million board feet in 1987 to 530 million board feet in 1991.
- Four principal saw-log species—black oak, white oak, red oak, and shortleaf pine—accounted for 78 percent of the saw logs supplied to the mills.
- During 1991, Missouri produced 16 thousand cords of pulpwood, 8 thousand cords less than in 1987.
- Missouri loggers cut 7.5 million board feet of veneer logs in 1991, 60 percent more than in 1987.
- Missouri veneer mills imported 5 million board feet in 1991.
- Total material harvested from timberland for industrial roundwood (excluding residential fuelwood) in 1991 was 189 million cubic feet. Growing stock accounted for 65 percent (122 million cubic feet) of this total.
- Only one-fourth of all the mill residue generated remained unused; most of this was fine residue.

SAW LOGS

- Loggers cut nearly 530 million board feet of Missouri saw logs in 1991, up 4 percent (21 million board feet) from 1987. Nearly 30 percent was black oak.
- Major saw-log species harvested in 1991 were black oak, white oak, red oak, and shortleaf pine. Red oak and cottonwood were the only species to have major declines in production between 1987 and 1991—38 and 5 million board feet, respectively (fig. 3).

Figure 1.—Primary wood-using plants in Missouri, 1991.

Figure 2.—Industrial roundwood production in Missouri by type of product, 1991.

- Saw-log production was the highest in the Eastern Ozark Unit of Missouri with 277 million board feet or 52 percent of the total saw-log production in 1991. The Southwest Ozark and Prairie Units together provided another 33 percent of the saw logs cut in Missouri.
- Two percent of the saw-log volume—primarily black walnut, red oak, white oak, and black oak—was shipped to Kansas, Arkansas, Iowa, and other States outside the region.
- In 1991, 395 operating sawmills in Missouri received 568 million board feet of saw logs; in 1987, 410 saw mills received 540 million board feet.

Figure 3.—Saw-log production in Missouri by selected species group, 1987 and 1991.

- Missouri imported a total of 46 million board feet of saw logs from Illinois, Arkansas, Iowa, Indiana, Kansas, and other States. Major imported species were red oak, white oak, cottonwood, and black walnut.
- Average annual lumber output per saw mill rose 9 percent from 1.3 million board feet in 1987 to 1.4 million board feet in 1991.

VENEER LOGS

- Loggers cut 7.5 million board feet of Missouri veneer logs and bolts in 1991, nearly 60 percent more than in 1987.
- Of the 7.5 million board feet of veneer logs and bolts cut in 1991, 98 percent remained in the State, and the remaining two percent was exported to Illinois, and other countries.
- Black walnut was the primary veneer species cut in Missouri, followed by white oak, red oak, and cottonwood (fig. 4). Black walnut and white oak were the only species shipped to Illinois and Canada for export to the Pacific Rim and Europe.

Figure 4.—Veneer log and bolt production by major species in Missouri, 1987 and 1991.

- Four Missouri veneer mills received nearly 13 million board feet of logs and bolts. Imports totaled more than 5 million board feet from surrounding States and other States outside the region. Iowa and Arkansas each contributed more than 1 million board feet of veneer logs and bolts.
- White oak and cottonwood were the two major species imported in 1991 with 2.2 million board feet and 1.3 million board feet, respectively.

COOPERAGE LOGS

- In 1991, 29.1 million board feet of cooperage logs were cut by loggers in Missouri, nearly 1 1/2 the amount cut in 1987.
- White oak was the predominant species used for cooperage in 1991 with 28.1 million board feet.

CHARCOAL

The information presented in this report pertains to primary production of products from roundwood. Table 20, however, shows how much residue material went into the production of charcoal. At least 10 operations in the State use residues exclusively for charcoal production, but they are not included as primary mills in table 1 because they do not process roundwood.

- Charcoal production from roundwood increased from 39 thousand cords in 1987 to 67 thousand cords in 1991.
- White, black, and red oak accounted for more than 80 percent of all the charcoal produced from roundwood; hickory contributed another 12 percent (fig. 5).
- Production for charcoal was mainly concentrated in the three Ozark Units.

Figure 5.—Charcoal roundwood production in Missouri 1987 and 1991.

PULPWOOD

- Wood residues, generated from primary wood-using mills, were the major source of the pulpwood in Missouri, accounting for the equivalent of 71 thousand cords in 1991 (fig. 6).

- Loggers in Missouri cut nearly 16 thousand cords of pulpwood roundwood in 1991, a 43-percent drop from 1987. Soft hardwoods¹, predominately cottonwood, soft maple, and sycamore, accounted for 64 percent of the roundwood harvested for pulpwood. Hard hardwoods², predominately black, red, and white oaks, elm, ash, and other hardwoods accounted for another 33 percent of roundwood cut for pulpwood.

Figure 6.—Pulpwood production in Missouri by species group and type of residue, 1991.

- All of the roundwood pulpwood harvested in 1991 came from the Prairie and Riverborder Units.

OTHER PRODUCTS

- More than 4 million posts were cut in 1991, primarily from pine, cedar, oak, and osage-orange. More than half of the posts were cut in the Southwest Ozark Unit.
- Handle bolts and other miscellaneous products accounted for 10 percent of the industrial roundwood cut in Missouri in 1991.

¹ Hardwood species with an average specific gravity of 0.50 or less (cottonwood, basswood, black gum, etc.).

² Hardwood species with an average specific gravity greater than 0.50 (all oaks, elm, green ash, etc.).

Residential fuelwood is a major nonindustrial product in Missouri. The results of a 1987 residential fuelwood study are available in "Residential Fuelwood Production and Sources from Roundwood in Missouri", 1987, RB-NC-132.

TIMBER REMOVALS

- In the production of Missouri's industrial roundwood harvest, 121.8 million cubic feet of growing stock was removed from timberlands in 1991, a 21-percent increase since 1987.
- Total amount of material harvested for industrial roundwood in 1991 (exclusive of residential fuelwood) was 189 million cubic feet. Thirty-six percent was left in the woods as logging residues (fig. 7). Residue material includes tops, limbs, cull material, and growing-stock material not used for products.

Figure 7.—Distribution of trees and tree material harvested for industrial roundwood in Missouri, 1991.

- Major species harvested from both growing stock and sawtimber were oak (white, red, and black), shortleaf pine, hickory, and soft maple.

HARVEST RESIDUE

- During 1991, loggers in Missouri generated an estimated 67.6 million cubic feet of harvest residues. Harvest residues consist of all wood fiber left behind from trees cut or killed during logging operations on timberland and not subsequently used for industrial products.
- Black, white, and red oak accounted for 72 percent of all logging residues in 1991.
- Three counties—Reynolds, Wayne, and Shannon—each produced more than 4 million cubic feet of logging residue. All counties except Butler and St. Francois in the Eastern Ozarks had more than 1 million cubic feet of residues.

PRIMARY MILL RESIDUE

- Only one-fourth of all the mill residue generated remained unused; most of this was fine residue.
- Charcoal plants used 38 percent of the total mill residues produced in 1991. Pulpwood mills consumed 9 percent of the coarse mill residue for fiber products and industry, and households consumed 15 percent for fuel (fig. 8).
- Fine mill residue and bark were used primarily for industrial fuel, soil conditioner, mulch, livestock bedding, and poultry litter.

Figure 8.—Disposition of mill residues by major use in Missouri, 1987 and 1991.

APPENDIX

STUDY METHODS

Data for this publication came from canvassing (with a formal questionnaire) all of the known primary wood-using mills that use Missouri logs and bolts. The study was a cooperative effort of the Missouri Department of Conservation (MDC) and the North Central Forest Experiment Station (NCFES). MDC foresters personally canvassed all the known Missouri primary mills (except one pulpmill). MDC forest products specialists provided estimates based on prior knowledge and contacts for a few Missouri mills that did not furnish complete data.

The NCFES mailed a formal questionnaire to the Missouri pulpmill and all out-of-State mills using Missouri roundwood. Followup of nonrespondents was by mail and telephone.

Logging utilization factors were used to estimate the logging residue. These factors were determined from Missouri logging utilization studies done by the NCFES during 1971-72 and 1986-87.

The NCFES edited and compiled the data.

SAMPLING ERROR

Because all primary wood-using mills were canvassed, there is no sampling error for data on the roundwood products they used or the wood and bark residue they generated.

DEFINITION OF TERMS

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

Fine mill residue.—Wood residue not suitable for chipping, such as sawdust and veneer clippings.

Forest Survey Unit.—A geographic area (group of counties) used by the Forest Inventory and Analysis Project to report periodic inventories and use of the Nation's forest resources.

Harvest residues.—The total unused wood material left after harvesting.

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production.—The quantity of industrial roundwood harvested in a geographic area.

Industrial roundwood receipts.—The quantity of industrial roundwood received in a geographic area regardless of the geographic source.

Logging residue.—The unused portions of growing-stock trees cut or killed by logging.

Logging slash.—The unused portion of unmerchantable trees or sections of trees cut or killed by logging.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Standard cord.—A stack of wood bolts (or the equivalent) encompassing 128 cubic feet of wood, bark, and air space. A cord of pulpwood contains 79 cubic feet of wood and 49 cubic feet of bark and air space.

Timberland.—Forest land producing or capable of producing crops of industrial wood and not withdrawn from timber utilization by statute or administrative regulation. Generally, this includes areas suitable for growing crops of industrial wood in excess of 20 cubic feet per acre annually.

Veneer log.—A log considered suitable in size and quality for producing veneer-sliced or rotary-cut.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED

SOFTWOODS

Cypress *Taxodium distichum*
Shortleaf pine *Pinus echinata*
Eastern redcedar *Juniperus virginiana*

HARDWOODS

Ash

White ash *Fraxinus americana*
Green ash *Fraxinus pennsylvanica*
Blue ash *Fraxinus quadrangulata*
American basswood *Tilia americana*
Beech *Fagus grandifolia*
River birch *Betula nigra*

Tupelo:

Blackgum *Nyssa sylvatica*
var. *biflora*
Black tupelo *Nyssa sylvatica*
var. *sylvatica*

Water tupelo *Nyssa aquatica*
Black cherry *Prunus serotina*
Cottonwood *Populus deltoides*
Elm

Winged elm *Ulmus alata*
American elm *Ulmus americana*
Slippery elm *Ulmus rubra*
Rock elm *Ulmus thomasi*

Hickory

Pecan *Carya illinoensis*
Shellbark hickory *Carya laciniosa*
Shagbark hickory *Carya ovata*
Mockernut hickory *Carya tomentosa*
Water hickory *Carya aquatica*
Bitternut hickory *Carya cordiformis*
Pignut hickory *Carya glabra*
Black hickory *Carya texana*

Hard maple

Black maple *Acer nigrum*
Sugar maple *Acer saccharum*

Soft maple

Red maple *Acer rubrum*
Silver maple *Acer saccharinum*

Red oak

Cherrybark oak *Quercus falcata*
var. *pagodaefolia*
Northern red oak *Quercus rubra*
Shumard oak *Quercus shumardii*
Scarlet oak *Quercus coccinea*
Southern red oak *Quercus falcata*
Shingle oak *Quercus imbricaria*

Blackjack oak *Quercus marilandica*
Water oak *Quercus nigra*
Pin oak *Quercus palustris*
Willow oak *Quercus phellos*
Black oak *Quercus velutina*
White oak

White oak *Quercus alba*
Swamp white oak *Quercus bicolor*
Bur oak *Quercus macrocarpa*
Swamp chestnut oak *Quercus michauxii*
Chinkapin oak *Quercus muehlenbergii*
Overcup oak *Quercus lyrata*
Post oak *Quercus stellata*

Sweetgum *Liquidambar styraciflua*
American sycamore *Platanus occidentalis*
Black walnut *Juglans nigra*
Yellow-poplar *Liriodendron tulipifera*
Other hardwoods

Black locust *Robinia pseudoacacia*
Common persimmon *Diospyros virginiana*
Flowering dogwood *Cornus florida*
Honeylocust *Gleditsia triacanthos*
Red mulberry *Morus rubra*
Sugarberry *Celtis laevigata*
Osage-orange *Maclura pomifera*
Butternut *Juglans cinerea*
Black willow *Salix nigra*
Boxelder *Acer negundo*
Cucumbertree *Magnolia acuminata*
Hackberry *Celtis occidentalis*
Kentucky coffeetree *Gymnocladus dioica*
Ohio buckeye *Aesculus glabra*
Sassafras *Sassafras albidum*

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

Hackett, Ronald L.; Jones, Shelby; Piva, Ronald J.

1993. **Missouri timber industry—an assessment of timber product output and use, 1991.** Resour. Bull. NC-151. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 46 p.

Discusses recent Missouri forest industry trends; production and receipts of saw logs; and production of charcoal, veneer logs, cooperage logs, and other products in 1991. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of this residue.

KEY WORDS: Saw logs, charcoal, cooperage, veneer logs, roundwood, residue.
