Pulpwood Production in the North-Central Region, 1994

Ronald J. Piva

NOTE: This report includes all primary products made from reconstituted wood fiber. In addition to woodpulp, this includes particleboard and engineered lumber products¹ made from chips, shavings, wafers, flakes, strands, and sawdust. This report presents the production by county of the raw fiber material delivered to mills. Thus, these data report only that portion of the timber harvest used as raw material and do not necessarily reflect the volume of growing stock harvested.

Pulpwood constitutes more than half the industrial timber products harvested annually in the Lake States (Michigan, Minnesota, and Wisconsin) and is an important product in the Central States (Illinois, Indiana, Iowa, and Missouri) and the Plains States (Kansas, Nebraska, North Dakota, and South Dakota).

Current detailed information about pulpwood production² is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, forest industry development, and scientific studies.

Since 1979, we have included logs, bolts, and wood residue used in manufacturing flake board, wafer board, oriented strand board, and medium density fiberboard in this annual report. Engineered lumber was included in this report in 1992. Together, these products are called particleboards, and all mills manufacturing these boards will be called particleboard mills in this paper. Wood used at particleboard mills is identical or nearly identical to wood used at pulp mills; therefore, including this wood in our study provides a more accurate estimate of demand for pulpwood-like material.

Ronald J. Piva, Forester, received a B.S. degree in forest management from the University of Missouri-Columbia. He joined the Forest Service in 1989, and has been working with North Central's Forest Inventory and Analysis Unit since.

Particleboard mills were in their infancy before 1979 and used primarily aspen and wood residue. Therefore, data for these mills do not distort roundwood use trends for other species nor preclude comparing 1994 survey results with those of 1978 and previous years.

Pulp and particleboard mills using North Central States timber in 1994 reported their pulpwood receipts³ by species group and county of origin. This report presents the results of the survey, analyzes the data, compares results with those of 1993 or earlier years, and discusses trends in pulpwood production and use.

The Lake States, Central States, and Plains States are discussed separately because the timber types in each area are different, the flow of wood between the areas is nominal, and more detailed data on pulpwood production and receipts in the Central and Plains States might reveal the operations of individual mills. This is the 36th annual report of the pulpwood harvest in Lake States counties, the 35th annual report of the Central States harvest, and the 2nd report of the pulpwood harvest in the Plains States.

Several mills purchase their pulpwood based on weight rather than volume. Conversion factors to convert green tons of pulpwood to standard cord equivalents are shown in the Appendix.

¹ U.S. Forest Products Laboratory. 1974. *Wood handbook: wood as an engineering material*. Agric. Handb. 72. Washington, DC: U.S. Department of Agriculture, Forest Service: 23-27. (Revised.)

² Pulpwood production, determined from mill receipts, is the annual volume of pulpwood cut, plus the annual wood residue volume produced by sawmills, veneer mills, etc., used for pulp, particleboard, wafer board, oriented strand board, medium density fiberboard, or engineered lumber.

³ Pulpwood receipts are the volume of wood received by mills in a specific State or region, regardless of the geographic source.

LAKE STATES

PRODUCTION

- Pulpwood production as a whole increased to 9.7 million cords⁴ in 1994 from 9.4 million cords in 1993, a rise of 4 percent

Figure 1.—Lake States pulpwood production by species group and residues, 1994.

- Of each cord produced, 92 percent came from roundwood (including chips from roundwood) and 8 percent came from the residue⁵ of wood-using plants (fig. 1).
- Hardwoods constituted 78 percent of the total pulpwood production.
- Principal species of roundwood harvested in 1994 were aspen (4.4 million cords), jack pine (810 thousand cords), hard maple (685 thousand cords), soft maple (573 thousand cords), and white birch (497 thousand cords).
- Aspen remained the dominant species of pulpwood roundwood harvested—49 percent of the total.
- Softwood roundwood production increased by less than one-half percent to 1.9 million cords in 1994. Pulpwood production from softwood residue rose to 243 thousand cords, a 38-percent increase from the previous year (fig. 2).

Figure 2.—Softwood pulpwood production in the Lake States, 1993-1994.

⁴ All references to cords are in standard cords. A standard cord is 128 cubic feet of wood, bark, and air space.

⁵ Residue is the byproduct from sawmills, veneer mills, cooperage mills, and other wood-using mills that is used for pulping and particleboard. Residue includes slabs, edgings, veneer cores, sawdust, fines, woodflour, and chips manufactured from slabs, edgings, and veneer cores.

- Whole-tree-chip⁶ (WTC) production, which makes up 7 percent of the total pulpwood production in the Lake States, increased 13 percent to 679 thousand cords in 1994 (fig. 3).

Figure 3.—Whole-tree-chip production in the Lake States, 1990-1994.

- Michigan was the major producer of whole-tree chips in the Lake States in 1994 with 448 thousand cords (66 percent of the WTC production) (fig. 4).

Figure 4.—WTC production by State in the Lake States, 1994.

⁶ Pulpwood produced from chipping entire trees (all portions of the trees above ground, except the stumps).

- Aspen was the predominant species used in WTC in 1994 with 302 thousand cords, 44 percent of the total WTC production.
- Jack pine was the predominant softwood species used in WTC in 1994, making up 96 percent of the softwood WTC production and 16 percent of the total WTC production.

Michigan

- Michigan pulpwood production rose 3 percent to 3.3 million cords in 1994 (fig. 5).

Figure 5.—Michigan pulpwood production by species group and residues, 1990-1994.

- The Western Upper Peninsula was the top producing region in the State in 1994 with 38 percent of the roundwood harvested (fig. 6).

Figure 6.—Michigan roundwood pulpwood production by Forest Survey Unit and species groups, 1994.

- Marquette County in the Western Upper Peninsula was the top producing county in the State with 326 thousand cords.
- Roundwood pulpwood production in 1994 increased 9 percent in the Western Upper Peninsula, increased only 2 percent in the Northern Lower Peninsula, remained the same in the Southern Lower Peninsula, and decreased 1 percent in the Eastern Upper Peninsula.

Minnesota

- Pulpwood production including residues increased 2 percent to 3.0 million cords in 1994 (fig. 7).
- The Aspen-Birch Unit became the top pulpwood producing area in the State in 1994 with 1.32 million cords, followed by the Northern Pine Unit with 1.28 million cords (fig. 8).
- Aspen pulpwood production decreased 29 thousand cords in 1994 to 2.2 million cords, a 1-percent decrease over the previous year.
- After increasing in 1993, softwood roundwood production decreased 8 percent or 43 thousand cords in 1994.

Figure 7.—Minnesota pulpwood production by species group and residues, 1990-1994.

Figure 8.—Minnesota roundwood pulpwood production by Forest Survey Unit and species group, 1994.

- St. Louis County, in the Aspen-Birch Unit, remained the top producing county with 622 thousand cords, a 6-percent decrease from the previous year.
- Roundwood pulpwood production increased by 52 percent or 12 thousand cords in the Prairie Unit and by 36 percent or 59 thousand cords in the Central Hardwood Unit. It decreased by 1 percent or 12 thousand cords in the Aspen-Birch Unit and by 4 percent or 58 thousand cords in the Northern Pine Unit.

¹ Table may not add due to rounding.² Vertical columns of figures under the box heading "Production by State" present the amount of roundwood cut or residue generated in each state.³ Mostly Western States.⁴ Pulpwood shipped to mills outside of region.

Wisconsin

- Pulpwood production in Wisconsin increased by 6 percent to 3.5 million cords in 1994, the largest increase of the three Lake States (fig. 9).

Figure 9. — Wisconsin pulpwood production by species group and residues, 1990-1994.

- Aspen harvests increased by 3 percent to 1.2 million cords in 1994 and accounted for 37 percent of the total harvest.

- Pine pulpwood production in Wisconsin accounted for 24 percent of the total harvest.
- The Northwest and Northeast Units were the top pulpwood producing areas in the State in 1994 with 1.3 million cords and 1.1 million cords, respectively (fig. 10).
- Bayfield County in the Northwest Unit was the top pulpwood producing county in the State with 197 thousand cords.

Harvesting Intensity

- In this report, we show the distribution of the harvest in two ways: first, the amount of pulpwood cut relative to the growing-stock volume in each of five major pulpwood species (fig. 11); and, second, the amount of pulpwood cut relative to commercial timber-land area (fig. 12).

Figure 10.—Wisconsin roundwood pulpwood production by Forest Survey Unit and species group, 1994.

Figure 11.—Cords of roundwood pulpwood (including chips from roundwood) harvested per 1,000 cords of growing-stock volume for each of five principal pulpwood species by Forest Survey Unit, 1994. Growing-stock volume was determined during the last forest inventory in each State.

LAKE STATES

Figure 12.—Cords of pulpwood cut per 1,000 acres of timberland in principal pulpwood-producing counties, 1994. Acres of timberland (stocking of trees greater than 16.7 percent) were determined during the last inventory in each State. Locations of active pulp and particleboard mills are shown.

Pulpwood harvesting was most intensive in the following areas by species: (100,000 cords or more cut)

Species	State	Survey Unit
Jack pine	Michigan Wisconsin	N. Lower Peninsula Central, Northwest
Red pine	Wisconsin	Central
Spruce	Minnesota	Aspen-Birch
Balsam fir	Minnesota	Aspen-Birch
Aspen	Michigan Minnesota Wisconsin	N. Lower Peninsula, W. Upper Peninsula, E. Upper Peninsula Northern Pine, Aspen-Birch, Central Hardwood Northwest, Northeast, Central
White birch	Wisconsin	Northwest, Northeast
Hard maple	Michigan Wisconsin	W. Upper Peninsula, E. Upper Peninsula Northeast, Northwest
Soft maple	Michigan	W. Upper Peninsula, N. Lower Peninsula

RECEIPTS

- In 1994, 34 woodpulp and 14 particleboard mills in the Lake States acquired 10.0 million cords of pulpwood in 1994, up 5 percent from 1993 (fig. 13).
- In 1994, Wisconsin supplied wood to 30 mills, Michigan supplied 30 mills, and Minnesota supplied 27 mills.
- Total imports of roundwood increased by 95 percent, with Canada supplying nearly 100 percent of the volume.
- Softwood residue imported from Canada increased by 45 percent in 1994 to 33 thousand cords. Softwood residue imported from States outside the region increased by 1 percent to 81 thousand cords. The main suppliers of the softwood residue from States outside the Lake States were Montana, South Dakota, and Wyoming.
- Total imports of all wood material increased to 310 thousand cords in 1994, a 46-percent increase from 1993. Canada contributed 55 percent of the total import receipts.

Figure 13.—Numbers of industrial plants in the Lake States using a particular species or residue for pulping and particleboard, 1993-1994.

Michigan

- Eleven Michigan mills consumed 3.3 million cords in 1994, up 3 percent from the previous year. Wisconsin provided 71 percent of the imported wood, and Canada provided 21 percent.

Minnesota

- The 16 mills in Minnesota reported consuming an estimated 3.0 million cords in 1994, an increase of 3 percent over 1993. Canada furnished 60 percent of the 188 thousand cords that were imported.

Wisconsin

- The 21 mills in Wisconsin consumed 3.7 million cords in 1994 an increase of 8 percent from 1993. Of that total, 580 thousand cords were supplied by out-of-State sources, an increase of 13 percent from 1993.

INDUSTRY TRENDS AND ANALYSIS

Pulp Mills

In this section pulp mills include wood fiber products such as paper, paperboard, hardboard, insulation board, and medium-density fiber board. All of these products are manufactured from wood that has been reduced to individual fibers, small fiber bundles, or fiber parts that are subsequently formed into a mat.

- Of the 9.7 million cords of pulpwood produced in 1994, 7.0 million cords (72 percent) were used for woodpulp products. Of each cord used to produce pulp, 91 percent was roundwood and 9 percent was residues.
- Principal species harvested for pulp were aspen (2,253 thousand cords), jack pine (681 thousand cords), hard maple (647 thousand cords), soft maple (478 thousand cords), and white birch (442 thousand cords) (fig. 14).

Figure 14.—Pulpwood production in the Lake States for pulp by species group and residues, 1990-1994.

- Aspen and other hardwoods were still the mainstays of the pulp mills in the region in 1994, but softwood use has increased steadily since 1988.
- The use of softwood residues increased 72 percent from 1993 while use of hardwood residues increased only 2 percent.
- Average daily woodpulp production was 13.5 thousand tons in 1994 (table 3). That total came from the following type mills:

Type of mill	Average daily woodpulp production (Thousand tons)
Kraft	6.0
Sulfite	0.9
Groundwood	
mechanical	3.3
Semi-chemical	2.6
Thermo-chemical and thermo-mechanical	0.6

- Lake States pulpwood production for pulp mills in 1990-1994 was:

Species	Production				
	1990	1991	1992	1993	1994
	(Thousand cords)				
Roundwood					
Aspen	2,029	2,095	2,184	2,427	2,253
Softwoods	1,677	1,718	1,702	1,780	1,790
Other species	2,070	1,948	2,041	2,113	2,351
Residue	450	506	471	514	594
Total	6,226	6,267	6,398	6,834	6,989

Michigan

- Pulpwood production for wood fiber was 2.3 million cords in 1994. Aspen was the major pulpwood species harvested in the State with 553 thousand cords, a 1-percent decrease from 1993.
- Michigan mills imported 217 thousand cords of pulpwood for processing: 181 thousand cords from Wisconsin, 11 thousand cords from Minnesota, and 25 thousand cords from Indiana and Canada combined. Michigan exported 305 thousand cords to Minnesota and Wisconsin, and 11 thousand cords to Canada.
- Michigan mills used 1,848 thousand cords of hardwood material in 1994, an increase of 4 percent from 1993. The use of softwood material in 1994 decreased by 3 percent to 467 thousand cords.

Minnesota

- Pulpwood production for woodpulp products totaled 1.8 million cords in 1994. Aspen was the predominant species harvested in the State with 963 thousand cords, an 8-percent decrease from 1993.
- Mills in Minnesota imported 166 thousand cords for pulp products: 17 thousand cords from Michigan, 55 thousand cords from Wisconsin, and 94 thousand cords from Canada. Minnesota exported 101 thousand cords to Wisconsin, 11 thousand cords to Michigan, and 41 thousand cords to Canada.

- In 1994, Minnesota mills had a 197-percent increase in the use of softwood residues from 1993, a 2-percent decrease for hardwood roundwood, a 5-percent decrease for softwood roundwood, and a 9-percent decrease for hardwood residues.

Wisconsin

- Pulpwood production for woodpulp products totaled 2.9 million cords in 1994. Aspen was the main species harvested with 736 thousand cords, a 10-percent decrease from 1993.
- Wisconsin mills imported 498 thousand cords of pulpwood: 298 thousand cords from Michigan, 101 thousand cords from Minnesota, 47 thousand cords from the Plains States, 34 thousand cords from Western States, and 18 thousand cords from Canada. Wisconsin exported 181 thousand cords to Michigan, 55 thousand cords to Minnesota, and 2 thousand cords to the Central States.
- The use of softwoods in Wisconsin mills increased by 6 percent, and use of hardwoods increased by 2 percent.

Outlook

- While U.S. paper and paperboard production increased 5 percent during 1994, the Lake States production of market pulpwood for woodpulp mills increased only 3 percent.

- Total output of paper and paperboard in the U.S. in 1994 was 89 million tons (43 million tons of paper and 46 million tons of paperboard). The Lake States output of paper and paperboard in 1994 was approximately 7 million tons or 8 percent of the U.S. total.
- Pulpwood consumption in the U.S. in 1994 totaled 106 million cords, a 1-percent increase from 1993. Pulpwood consumption in the Lake States was 7 percent of that total.

Particleboard Mills

Particleboard is a generic term for a panel manufactured from lignocellulosic material—commonly wood—essentially in the form of particles (as distinct from fibers). These fibers are bonded together with synthetic resin or other suitable binder, under heat and pressure, by a process wherein the interparticle bonds are created wholly by the added binder and to which other materials may have been added during manufacture to improve certain properties. The many types of particleboard differ greatly in regard to size and geometry of the particle, the amount of resin (adhesive) used, and the density to which the panel is pressed. The major types of particles used for particleboard are: shavings, flakes, wafers, chips, sawdust, strands, slivers, and wood wool (excelsior). Most particleboard in the U.S. is made from residues (shavings, sawdust, or chips), but some types require that roundwood (saw logs or pulpwood) be used. Wafer board is an example of a product for which particles must be cut from solid wood. A new product called engineered lumber was added to this generic term in 1992.

- The Lake States produced 2.8 million cords of pulpwood in 1994 for particleboard products, up 8 percent from 1993. For every cord of pulpwood used in particleboard manufacture, 94 percent came from roundwood and 6 percent was residues from wood-using plants (sawmills, veneer mills, etc.).

Figure 15.—Pulpwood production for particleboard in the Lake States, 1990-1994.

- Principal species harvested for particleboard products were aspen (2,146 thousand cords), jack pine (130 thousand cords), soft maple (95 thousand cords), and balsam poplar (71 thousand cords) (fig. 15).
- Total softwood roundwood used for particleboard products decreased from 152 thousand cords in 1993 to 149 thousand cords in 1994, a decrease of 2 percent. Softwood residue use decreased 4 percent—from 78 thousand cords in 1993 to 74 thousand cords in 1994.
- The use of hardwood roundwood increased from 2,232 thousand cords in 1993 to 2,449 thousand cords in 1994, an increase of 10 percent. Hardwood residue use decreased by 11 percent—from 98 thousand cords in 1993 to 87 thousand cords in 1994.
- Annual production capacity of the Lake States particleboard and engineered lumber product plants is:

Particleboard and panel: Company and product	Location	Production capacity (Million square feet 3/4-inch basis)
Georgia-Pacific - Particleboard	Gaylord, MI	300
Louisiana-Pacific - OSB*	Newberry, MI	61
Louisiana-Pacific - OSB*	Sagola, MI	180
Weyerhaeuser Co. - OSB*	Grayling, MI	180
Louisiana-Pacific - OSB*	Two Harbors, MN	61
Potlatch Corp. - OSB*	Grand Rapids, MN	170
Northwood Panelboard Co. - OSB*	Solway, MN	160
Potlatch Corp. - OSB*	Bemidji, MN	240
Potlatch Corp. - OSB*	Cook, MN	120
Louisiana-Pacific - Waferboard	Hayward, WI	230
Rodman Industries - Particleboard	Marinette, WI	15
Louisiana-Pacific - OSB*	Tomahawk, WI	208
Weyerhaeuser Co. - Particleboard	Marshfield, WI	190
All particleboard companies		2,115

Engineered lumber: Company	Location	Production capacity (Thousand cubic feet)
Trus-Joist McMillian - PSL**	Deerwood, MN	3,850

* Oriented strand board ** Parallel strand lumber

- Lake States pulpwood production for particleboard mills in 1990-1994 was:

Species	Production (Thousand cords)				
	1990	1991	1992	1993	1994
Roundwood					
Softwoods	140	158	157	152	149
Aspen	1,840	1,786	2,050	2,028	2,146
Other hardwoods	103	148	183	204	303
Residue	126	194	142	175	161
Total	2,209	2,286	2,532	2,559	2,759

- National housing starts increased almost 13 percent in 1994 to 1.45 million units. The continued growing economy and low mortgage rates contributed to the 8-percent increase in Lakes States pulpwood production for particleboard products.
- The particleboard mills in Michigan imported 52 thousand cords of aspen from Wisconsin and 48 thousand cords from Canada. Raw materials exported for particleboard production amounted to 12 thousand cords.

Michigan

- Pulpwood harvested for particleboard products totaled 851 thousand cords in 1994, of which aspen totaled 531 thousand cords. Residues used for particleboard products added another 87 thousand cords.

Minnesota

- Timber logged for particleboard products totaled 1.3 million cords (49 percent of the Lake States total). The predominant species cut was aspen with 1.2 million cords, or 95 percent of the total.

- The particleboard mills in Minnesota imported 19,700 cords from Canada and 2,500 cords from the Plains States. In 1994, raw materials exported from the State for particleboard manufacturing totaled 62 thousand cords.

Wisconsin

- Wisconsin produced 485 thousand cords of roundwood for particleboard manufacturing. The main species harvested was aspen with 423 thousand cords, or 87 percent of the total.
- The mills in Wisconsin imported 82 thousand cords of wood for particleboard manufacturing: 62 thousand cords from Minnesota, 12 thousand cords from Michigan, and 8 thousand cords from Canada. Wisconsin exported 60 thousand cords to Michigan particleboard mills in 1994.

New Mills and Expansions

Major pulp mill expansion and new construction are as follows:

- Appleton Papers Inc., Combined Locks, Wisconsin expansion was completed in 1994.
- Aspen Bay Pulp and Fibre, a bleached chemical thermo-mechanical pulp mill, is being built in Menominee, Michigan and should be finished by late 1997.
- Georgia-Pacific Flakeboard Limited has completed construction of a medium density fiberboard (MDF) operation in Sault Ste. Marie, Ontario, Canada. The plant began operation early in 1996.
- Potlatch Corp. Cloquet, Minnesota, is rebuilding the bleached kraft pulp mill, doubling its capacity by 1999.
- Potlatch Corp. Cook, Minnesota, has been permitted to double the capacity of its oriented strand board (OSB) mill; construction could be complete by 1998.

CENTRAL STATES

PRODUCTION

- Pulpwood production in the Central States (Illinois, Indiana, Iowa, and Missouri) increased 16 percent—from 288 thousand cords in 1993 to 333 thousand cords in 1994 (fig. 16).
- The flooding of 1993 contributed to a 19-percent decrease in pulpwood production from 1992. Although pulpwood production in 1994 rebounded from the depressed 1993 levels, pulpwood production in 1994 was still 6 percent below that of 1992. Missouri was still 24 percent below the 1992 production level, Illinois and Indiana were 2 percent below, but Iowa was 78 percent above the 1992 pulpwood production level.
- Hardwood residue from primary wood-using mills made up 70 percent of total production. Softwood residue from primary wood-using mills increased by 18 percent from 1993.

Figure 16.—Pulpwood production in the Central States, 1990-1994.

- Central States production for roundwood pulpwood was 96 thousand cords in 1994, up 36 percent from 1993. Pulpwood production from soft hardwood⁷ roundwood rose from 22 thousand cords in 1993 to 29 thousand cords in 1994 or 33 percent. Hard hardwood⁸ production also increased from 41 thousand cords in 1993 to 58 thousand cords in 1994 or 40 percent.

⁷Hardwood species with an average specific gravity of 0.50 or less.

⁸Hardwood species with an average specific gravity greater than 0.50.

Figure 17.—Production of pulpwood from roundwood (including chips from roundwood) in the Central States by counties, in standard cords, 1994. Locations of Central States and nearby pulp mills using Central States pulpwood are shown.

- Exports of roundwood and residues from the Central States in 1994 increased by 40 percent to 208 thousand cords. Central States pulpwood was shipped to Kentucky, Wisconsin, Ohio, and Michigan mills.
- Loggers harvested pulpwood in 14 counties of Illinois; 11 counties in southern Indiana; 8 counties in eastern Iowa; and 9 counties in northeast, central, and southeast Missouri (fig. 17 on previous page).
- Whole-tree chips made up 10 percent of the pulpwood production in the Central States in 1994. The 32 thousand cords of whole-tree chips were a 46-percent increase from the 1993 volume.

Illinois

- Illinois produced 76 thousand cords of pulpwood in 1994, up 39 percent from 1993. Illinois contributed 23 percent of the total production in the Central States in 1994 (fig. 18).

Figure 18.—Central States pulpwood production by species group and residues, 1994.

- Illinois does not have any primary woodpulp mills; consequently, all pulpwood harvested is shipped to plants outside the State.

Indiana

- Pulpwood production in Indiana accounted for 44 percent of the total pulpwood harvested in the Central States in 1994, or 147 thousand cords, a 3-percent increase from 1993.
- Pulpwood shipped to mills outside the north-central region totaled 80 thousand

cords, 55 percent of the State's total pulpwood production. The remaining 45 percent was used by mills in the Central and Lakes States.

Iowa

- The total pulpwood production in 1994 was 22 thousand cords, 7 percent of the region's total.
- Hardwood residues accounted for 53 percent of Iowa's pulpwood production in 1994, soft hardwood roundwood accounted for 33 percent, and hard hardwood roundwood accounted for 13 percent.
- Production of soft hardwood and hard hardwood pulpwood in 1994 increased by 72 percent and 71 percent, respectively, from 1993. Hardwood residues also increased by 73 percent.

Missouri

- Missouri was the second largest producer of pulpwood in the Central States in 1994 at 88 thousand cords or 26 percent of the region's total. Missouri pulpwood production increased by 14 percent from 1993.
- In 1994 Missouri exported 69 thousand cords or 79 percent of the State's pulpwood production to mills outside the region.

RECEIPTS

- Pulp mills in the region received 127 thousand cords in 1994, up 28 percent from 1993.
- Hardwood residue receipts increased by 20 percent, from 71 thousand cords in 1993 to 86 thousand cords in 1994.
- No softwoods were used for pulpwood for the 11th consecutive year in the Central States.

INDUSTRY TRENDS

- Average daily woodpulp production increased by 2 percent in 1994 to 826 tons (table 5).

- Mills in the adjacent States remained the dominant market for Central States pulpwood in 1994.
- Hardwood residue from sawmills continued to be the dominant form of pulpwood procured for Central States pulp mills.

PLAINS STATES

PRODUCTION AND RECEIPTS

- Pulpwood production in the Plains States was 111 thousand cords in 1994, a decrease of 3 percent from 1993, and came from South Dakota and Kansas (fig. 19).

Figure 19.—*Pulpwood production in the Plains States, 1993-1994.*

- Softwood residues accounted for 86 percent of the pulpwood production in the Plains States in 1994, all of which came from South Dakota (fig. 20).

Figure 20.—*Plains States pulpwood production, 1994.*

- Forty-seven thousand cords of softwood residue from the Plains States were exported to Wisconsin in 1994. An additional 2 thousand cords of hardwood residues were sent to Oklahoma.
- The Plains States imported 58 thousand cords of softwood residue from Wyoming in 1994.
- All of the pulpwood received in the Plains States was processed at Merillat Industries, Inc. (particleboard), in Rapid City, South Dakota, which has a production capacity of 95 million square feet 3/4 inch basis.

APPENDIX

Conversion Factors Used in the North-Central Region

Standard cords of green roundwood per green ton:

Species	Factor	Species	Factor

Piva, Ronald J.

1996. **Pulpwood production in the North Central Region, 1994.** Resour. Bull. NC-174. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 39 p.

Lake States pulpwood production increased 4 percent—from 9.4 million cords to 9.7 million cords. Central States pulpwood production increased 16 percent—from 288 thousand cords in 1993 to 333 thousand cords in 1994. Plains States pulpwood production was 111 thousand cords. Pulpwood production is shown by county and species group for Michigan, Minnesota, Wisconsin.

KEY WORDS: Roundwood, whole-tree-chips, residue, pulpwood, particle-board, Minnesota, Michigan, Wisconsin, Illinois, Iowa, Indiana, Missouri, Plains States.
