FOREWORD

In this bulletin we discuss recent Michigan forest industry trends and report the results of a detailed study of forest industry, industrial roundwood production, and associated primary mill wood and bark residue in Michigan in 1994. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, and forest industry development. Likewise, researchers need current forest industry and industrial roundwood information for planning projects.

Special thanks are given to the primary wood-using firms that supplied information for this study and to the Michigan Department of Natural Resources for canvassing the respondents. Their cooperation is greatly appreciated.

All board foot data in this report have been converted to International 1/4-inch scale by applying a multiplier of 1.08 to all saw log volume reported in Scribner Decimal C scale by sawmills, a multiplier of 1.04 to all veneer log volume reported in Scribner Decimal C scale by veneer mills, a multiplier of 1.38 to all saw log volume reported in Doyle scale by sawmills, and a multiplier of 1.14 to all veneer log volume reported in Doyle scale by veneer mills.

The last published report from a detailed study of all industrial roundwood output in Michigan was in 1992. Most comparisons in this report are with the 1992 study results. Row and column data of tables may not sum due to rounding, but data in each table cell are accurately displayed.

Michigan Timber Industry—An Assessment of Timber Product Output and Use, 1994

Ronald L. Hackett and John Pilon

HIGHLIGHTS

PRIMARY TIMBER INDUSTRY—INDUSTRIAL ROUNDWOOD

- In 1994, Michigan's primary wood-using industry was comprised of 284 mills, not including 32 sawmills that each processed less than 50 thousand board feet in 1994 (table 1).
- Most of the State's primary wood-using mills are located in the three most northern Forest Survey Units (figs. 1, 2).
- Between 1992 and 1994, Michigan's primary wood-using industry declined by 33 mills; most of these were small sawmills (table 1).
- In 1994, Michigan's primary wood-using industry processed 334.6 million cubic feet of roundwood—nearly a 2-percent increase since 1992 (table 2).
- Michigan's 11 pulp mills processed nearly 207.6 million cubic feet of roundwood in 1994, a 3-percent increase from 1992. These mills processed more than twice as much as the many sawmills did, accounting for 62 percent of all roundwood processed.
- Hardwoods made up 4 out of every 5 cubic feet of roundwood processed by the State's primary wood-using industry in 1994.
- In 1994, 386.9 million cubic feet of industrial roundwood was harvested from Michigan's forests, a 12-percent increase from 1992 (table 3). Softwood production increased by almost 1 percent and hardwood production increased by 15 percent from 1992 to 1994.
- The increase in hardwood production was associated with the increased use of aspen and maple for pulpwood and industrial fuelwood.
- In 1994, pulpwood remained the predominant roundwood product harvested from Michigan's forests (fig. 3).
- The State's industrial roundwood production was mainly in the Upper Peninsula and the Northern Lower Peninsula, which provided 93 percent in 1994 (fig. 4).
- Nearly all the industrial fuelwood and more than two-thirds of the saw-log production came from the Lower Peninsula. The Upper Peninsula provided nearly two-thirds of the pulpwood and more than three-quarters of the veneer logs harvested in the State.

Ronald L. Hackett, Research Forester, received a B.S. in forest resources from the University of Minnesota. He joined the Forest Service in December 1974 and has been working with the North Central Station's Forest Inventory and Analysis Unit since.

John Pilon, Forest Products Specialist, received a B.S. in forestry from Michigan Technological University in 1976. He joined the Michigan Department of Natural Resources in 1978 and has been working in its Forest Development Section since 1986.

PULPWOOD

- Michigan's pulpwood production (including both roundwood and mill residues generated by the State's other primary wood-using industries) has been steadily increasing over time. Pulpwood production has been hovering around the 3 million cord level for the past 7 years (table 4, fig 5).
- In 1994, pulpwood production in Michigan totaled 3.3 million cords, a 5-percent in-

Figure 1.—Forest Survey Units in Michigan.

Figure 2.—Number of primary wood-using mills by county, Michigan, 1994.

Figure 4.—Distribution of industrial roundwood production by Forest Survey Unit, Michigan, 1994.

crease from 1992. Much of the increase was concentrated in "other" hardwoods, birch, and aspen.

- Roundwood made up more than 92 percent of the pulpwood produced in 1994, and aspen and other hardwoods supplied nearly three-quarters of the roundwood.
- Michigan's pulpwood and particleboard mills consumed 90 percent of the State's production of pulpwood (table 5). The remainder was shipped out of State, mainly to Wisconsin, for processing.
- Aspen was the major species exported.
- The Western Upper Peninsula provided more than one-third of the roundwood pulpwood harvested in the State in 1994 (table 6).
- Three counties—Marquette, Ontonagon, and Iron—each reported more than 150 thousand cords of roundwood pulpwood harvested in 1994.
- Pulpwood receipts in 1994 totaled nearly 3.3 million cords, a 16-percent increase from 1992 (table 7). Most of the increase occurred in "other" hardwoods, birch, and aspen; pine declined slightly.
- In 1994, roundwood pulpwood made up more than 88 percent of the pulpwood received; aspen and pine combined supplied more than 63 percent of the roundwood.
- Michigan supplied nearly 90 percent of the pulpwood processed by its pulp and particleboard mills in 1994. The remainder was imported from neighboring States, mainly Wisconsin (table 8). Canada provided 72 thousand cords.
- Aspen, hard maple, and white birch were the main species imported (table 9).

Figure 5.—Pulpwood production of aspen and all species in Michigan for selected years.

Pulpwood is a major industrial product in Michigan. A yearly study is done of all pulpmills and particleboard mills in the North Central Region. A separate publication is available from the Station.

SAW LOGS

- Loggers delivered 658 million board feet of Michigan saw logs to mills in Michigan, Wisconsin, Minnesota, other States, and Canada in 1994, up 4 percent (26 million board feet) from 1992 (table 10).
- Most of the increase was associated with soft and hard maple, and ash.
- Saw-log receipts also increased 3 percent; all of the increase was associated with hardwood saw logs especially soft and hard maple, and ash.
- Michigan sawmills processed more than 88 percent of the State's production of saw logs

(table 11, fig. 6). The remainder was exported to Wisconsin, Indiana, Ohio, Minnesota, and Canada in 1994.

- Wisconsin and Indiana were the two largest recipients of Michigan saw logs. Aspen was the single largest species exported to Wisconsin, while red oak was the single largest species shipped to Indiana sawmills.
- The Upper Peninsula provided most of the saw-log volume that was exported to Wisconsin. The Southern Lower Peninsula shipped more than 23 million board feet of saw logs to Indiana.
- The Northern Lower Peninsula provided more than half of the State's production of saw logs (table 12).
- Major saw-log producing counties with more than 20 million board feet each were Newaygo and Gogebic Counties.

Figure 6.—Saw-log production exported (mills outside Michigan), imported, and retained by select species in Michigan, 1992 and 1994.

- Michigan supplied nearly 98 percent of the saw-log volume needed by its sawmills in 1994 (table 13). The remainder was imported mostly from Wisconsin, Indiana, Ohio, and Canada.

- Between 1992 and 1994, veneer log production in Michigan increased by 29 percent—from 38 million board feet to 49 million board feet. During the same time, veneer log receipts increased by 10 percent to more than 44 million board feet (table 14).
- Hard maple veneer log production had a 45-percent increase between 1992 and 1994. Hard maple remained the single largest species of veneer log produced in Michigan, accounting for nearly 43 percent of all

veneer logs produced in the State (table 15). In contrast, aspen was the single largest species of veneer log processed in the State in 1994, increasing by nearly 65 percent between surveys. Aspen accounted for more than half of all veneer logs processed in 1994.

- Michigan retained more than one-half of the veneer log volume it harvested in 1994 (table 16, fig. 7). The remainder was shipped out of State for processing, mostly to Wisconsin.
- Hard maple was the major species of veneer log exported from Michigan.
- Nearly 60 percent of all veneer log volume was produced in the Western Upper Peninsula.

Figure 7.—Veneer production exported (mills outside Michigan), imported, and retained by select species in Michigan, 1992 and 1994.

- Michigan supplied 60 percent of the State's veneer log requirements in 1994 (table 17). Another 34 percent was provided by Wisconsin, and the remaining 6 percent was provided by Illinois, Indiana, other States outside the region, and Canada.
 - Aspen, hard maple, red and white oak make up more than 80 percent of the veneer log volume processed in the State. More than 60 percent of the aspen processed in Michigan veneer mills came from Wisconsin (table 18).
 - All of the industrial fuelwood production occurred in hardwood species, mainly aspen and soft maple.
 - The Northern Lower Peninsula produced the most industrial fuelwood in 1994 with 23 million cubic feet; the remaining 0.1 million cubic feet was harvested in the Eastern Upper Peninsula.
 - In 1994, 3.1 million cubic feet of other industrial roundwood was harvested in Michigan. These products included excelsior/shaving bolts, cabin logs, mine timbers, posts, and poles products.
- OTHER PRODUCTS**
- Industrial fuelwood totaled nearly 24 million cubic feet in 1994 and increased by 33 percent between surveys.
 - Except for excelsior/shaving bolts and some posts, which were cut mainly from aspen and oak, respectively, almost all of the

volume for these other products was cut from softwood species. Red pine, white pine, and northern white-cedar were cut for posts. Red pine was also used for poles along with northern white-cedar.

- Pole production showed an increase between surveys due to increased demand for utility poles in the US and overseas. Cabin log production declined from 1.0 million cubic feet in 1992 to 712 thousand cubic feet in 1994—a nearly 29-percent drop.

Residential fuelwood is a major nonindustrial product in Michigan. The results of a residential fuelwood study conducted in 1992 are available in a separate Station publication.

TIMBER REMOVALS

- In the production of industrial roundwood in 1994, more than 354 million cubic feet of

Michigan's growing-stock inventory was removed from timberland, a 10-percent increase from 1992 (tables 19, 20, and fig. 8).

- More than 50 percent of the growing-stock removals came from the Upper Peninsula, the region of the State where pulpwood production is concentrated.
- Aspen alone accounted for one-third of all growing-stock removals.
- Industrial roundwood harvesting also removed 1.1 billion board feet of wood from the sawtimber portion of the growing-stock inventory in 1994 (table 21), an 8-percent increase over 1992.
- More than half of all sawtimber removals (55 percent) occurred in the Lower Peninsula, the area of the State where saw-log production is concentrated.

Figure 8.—Distribution of timber removals for industrial roundwood by source of material, Michigan, 1994.

- Sawtimber removals were concentrated in five species—aspens, red oak, hard and soft maple, and red pine—which together made up more than two-thirds of all sawtimber removals. Aspen alone accounted for nearly one-quarter of all sawtimber removals.

HARVEST RESIDUES

- In 1994, harvesting of industrial roundwood products left nearly 90 million cubic feet of harvest residues on the ground (table 22), approximately a 10-percent increase over 1992, which was generally due to the increase in harvesting of saw-logs and pulpwood in 1994.
- Nearly 60 percent of the harvest residues were left in the Upper Peninsula, and one-third were left in the Northern Lower Peninsula.
- Two species, aspen and hard maple, accounted for more than 45 percent of all harvest residues.

PRIMARY MILL RESIDUE

- In converting industrial roundwood into milled products, such as lumber, sheathing,

and wood pulp, Michigan's primary wood-using industry generated 2.7 million green tons of wood and bark residues (table 23).

- Bark and coarse wood residues each made up about one-third of the total volume; fine wood residues made up the remainder (fig. 9).
- Almost all the mill residues were used; nearly 60 percent ended up as industrial fuel (fig. 10).
- Mill residues used for industrial fuelwood at the mills where they were produced accounted for 32 percent of the total residues; another 27 percent of the total was sold to other mills or industries before being burned.
- In general, most coarse wood residues were used for fiber products; most fine residues were used for either fuel or other products, such as mulch, and litter; and most bark was burned as fuel or used for mulch.
- More than two-fifths of the mill residues were generated in the Northern Lower Peninsula, and more than 90 percent of all unused mill residues were located in the Northern Lower Peninsula.

Figure 9.—Distribution of residues generated by primary wood-using mills by type of residue, Michigan, 1994.

Figure 10.—Distribution of residues generated by primary wood-using mills by method of disposal, Michigan, 1994.

REGIONAL TRENDS

Western Upper Peninsula

- In 1994, 117 million cubic feet of roundwood was produced in the eight counties that make up the Western Upper Peninsula Unit of Michigan, and it accounted for more than 30 percent of the State's total output.
- The 117 million cubic feet of industrial roundwood reflects an increase of more than 4 percent between 1992 and 1994. Softwood output remained at the 1992 level in the unit while hardwood output went up by more than 5 percent.
- Saw-log production of nearly 22 million cubic feet accounted for 19 percent of the total roundwood production in this unit, near the same level as in 1992.
- Pulpwood production increased by more than 3 percent and accounted for more than three-quarters of the unit's total roundwood output.
- The Western Upper Peninsula produced nearly 20 percent of the State's saw logs, 63 percent of the veneer logs, more than 37 percent of the pulpwood, less than 1 percent of the industrial fuelwood, and nearly 18 percent of the roundwood used for other industrial products.
- In 1994, the Western Upper Peninsula had 26 sawmills, 2 pulpmills, 1 veneer mill, 1 particleboard mill, and 4 other miscellaneous mills.
- More than 15 percent of the sawmills in this region had receipts greater than 10 million board feet, while more than three-quarters of the mills had less than 5 million board feet of receipts.

Eastern Upper Peninsula

- Between 1992 and 1994, roundwood production from the seven counties that make up the Eastern Upper Peninsula Unit increased by 10 percent to 77 million cubic feet.

- This unit accounted for nearly one-fifth of the State's total roundwood output in 1994, the same level as in 1992.
- Saw-log production of 12 million cubic feet accounted for more than 15 percent of the total roundwood production in this unit.
- Pulpwood production increased by 7 percent between 1992 and 1994, and accounted for nearly four-fifths of the unit's total roundwood output in 1994.
- The Eastern Upper Peninsula produced more than 10 percent of the State's saw logs, more than one-quarter of the veneer logs, more than one-quarter of the pulpwood, less than 1 percent of the industrial fuelwood, and more than two-thirds of the roundwood used for other industrial products.
- In 1994, 54 mills—including 34 sawmills, 2 veneer mills, 1 pulpmill, 1 waferboard mill, and 16 miscellaneous mills—operated in the Eastern Upper Peninsula.
- Only two sawmills in the Eastern Upper Peninsula had receipts of more than 10 million board feet, while more than 90 percent of the sawmills had receipts less than 5 million board feet.

Northern Lower Peninsula

- The 33-county Northern Lower Peninsula Unit produced the largest amount of roundwood in the State. In 1994, this unit produced more than 166 million cubic feet of industrial roundwood, over 17 percent more than in 1992. Total production of industrial roundwood was 43 percent of the State's total industrial roundwood output.
- Saw-log production of more than 60 million cubic feet accounted for more than one-third of the total roundwood produced in this unit in 1994.
- Pulpwood production increased by nearly 33 percent between 1992 and 1994, and accounted for nearly one-half of the unit's total roundwood output in 1994.

- The Northern Lower Peninsula Unit produced nearly one-half of the State's saw logs, nearly 6 percent of the veneer logs, more than one-third of the pulpwood, nearly 100 percent of the industrial fuelwood, and more than 13 percent of the other industrial roundwood produced.
- In 1994, 178 mills—including 153 sawmills, 1 veneer mill, 3 pulpmills, 2 particle-board mills, and 19 miscellaneous mills—operated in the Northern Lower Peninsula.
- Less than 5 percent of the sawmills in the Northern Lower Peninsula had receipts of 10 million board feet or more.

Southern Lower Peninsula

- The 35 counties that make up the Southern Lower Peninsula Unit produced nearly 26 million cubic feet of industrial roundwood, over 13 percent more than in 1992. Total production of industrial roundwood in 1994 was nearly 7 percent of the State's total industrial roundwood output.
- Saw-log production increased by more than 3 percent to 19 million cubic feet in

1994. This volume accounted for nearly three-quarters of the unit's industrial roundwood production.

- Pulpwood production declined by two-thirds from 1992 to 5 million cubic feet of roundwood output in 1994. Pulpwood production accounted for nearly 20 percent of the unit's total roundwood output.
- The Southern Lower Peninsula Unit produced more than 16 percent of the State's saw logs, more than 15 percent of the veneer logs, 2 percent of the pulpwood, and nearly 2 percent of the other industrial products.
- In 1994, 72 mills—including 67 sawmills, 2 veneer mills, 2 pulpmills, and 1 miscellaneous mill—operated in the Southern Lower Peninsula.
- Only one sawmill in the unit had receipts of greater than 10 million board feet; more than 90 percent of the mills had receipts of less than 5 million board feet.

APPENDIX

STUDY METHODS

This study was a cooperative effort of the Michigan Department of Natural Resources (MIDNR) and the North Central Forest Experiment Station (NCFES). Using mail questionnaires supplied by NCFES and designed to determine the size and composition of the State's primary wood-using industry, its use of roundwood, and its generation and disposition of wood residues, the MIDNR canvassed all primary wood-using mills within the State. The MIDNR followed up on nonresponding mills by using additional mailings, telephone, and personal contacts until a 100-percent response was achieved. Completed questionnaires were sent to NCFES for editing and processing.

As part of data editing and processing, all industrial roundwood volumes reported on the questionnaires were converted to standard units of measure using regional conversion factors. Timber removals by source of material and harvest residues generated during logging were estimated from standard product volumes using factors developed from logging utilization studies previously conducted by NCFES. Finalized data on Michigan's industrial roundwood receipts were loaded into a regional timber removals database and supplemented with data on out-of-State uses of Michigan roundwood to provide a complete assessment of Michigan's timber product output.

DEFINITION OF TERMS

Board foot.—Unit of measure applied to roundwood. It relates to lumber that is 1 foot long, 1 foot wide, and 1 inch thick (or its equivalent).

Bolt.—A short log, that is no more than 16 to 20 feet long, to be sawn for lumber or peeled for veneer.

Central stem.—The portion of a tree between a 1-foot stump and the minimum 4.0-inch top diameter outside bark, or point where the central stem breaks into limbs.

Coarse mill residue.—Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

Commercial species.—Tree species presently or prospectively suitable for industrial wood products. (Note: Excludes species of typically small size, poor form, or inferior quality such as hophornbeam, Osage-orange, and redbud.)

Cull removals.—Net volume of rough and rotten trees plus the net volume in sections of the central stem of growing-stock trees that do not meet regional merchantability standards, harvested for industrial roundwood products.

Dead removals.—Net volume of dead trees harvested for industrial roundwood products.

Diameter at breast height (d.b.h.).—The outside bark diameter at 4.5 feet above the forest floor on the uphill side of the tree. For determining breast height, the forest floor includes the duff layer that may be present, but does not include unincorporated woody debris that may rise above the ground line.

Fine mill residue.—Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest land.—Land at least 16.7 percent stocked by forest trees of any size, or formerly having had such tree cover, and not currently developed for nonforest use. (Note: Stocking is measured by comparing specified standards with basal area and/or number of

trees, age or size, and spacing.) The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shelterbelt strips of timber must have a crown width of at least 120 feet to qualify as forest land. Unimproved roads and trails, streams, or other bodies of water or clearings in forest areas shall be classed as forest if less than 120 feet wide.

Growing-stock removals.—The growing-stock volume removed from the timberland inventory by harvesting industrial roundwood products. (Note: Includes sawtimber removals, poletimber removals, and logging residues.)

Growing-stock tree.—A live timberland tree of commercial species that meets specified standards of size, quality, and merchantability. (Note: Excludes rough, rotten, and dead trees.)

Growing-stock volume.—Net volume of growing-stock trees 5.0 inches d.b.h. and over, from 1 foot above the ground to a minimum 4.0-inch top diameter outside bark of the central stem or to the point where the central stem breaks into limbs.

Hardwoods.—Dicotyledonous trees, usually broad-leaved and deciduous.

Harvest residues.—The total net volume of unused portions of trees cut or killed by logging. (Note: Includes both logging residues and logging slash.)

Industrial roundwood products.—Saw logs, pulpwood, veneer logs, poles, commercial posts, piling, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood exports.—The quantity of industrial roundwood harvested in a geographical area and transported to other geographical areas.

Industrial roundwood imports.—The quantity of industrial roundwood received from other geographical areas.

Industrial roundwood production.—The quantity of industrial roundwood harvested

in a geographic area plus all industrial roundwood exported to other geographical areas.

Industrial roundwood receipts.—The quantity of industrial roundwood harvested for commercial mills in a geographic area plus all industrial roundwood imported from other geographical areas.

Industrial roundwood retained.—The quantity of industrial roundwood harvested from and processed by commercial mills within the same geographical area.

International 1/4-inch rule.—A log rule or formula for estimating the board foot volume of logs, allowing 1/2-inch of taper for each 4-foot length. The rule appears in a number of forms that allow for kerf. In the form used by FIA, a 1/4-inch of kerf is assumed. This rule is used as the USDA Forest Service standard log rule in the Eastern United States.

Limbwood removals.—Net volume of all portions of a tree other than the central stem, (including forks, large limbs, tops, and stumps) harvested for industrial roundwood products.

Logging residue.—The net volume of unused portions of the merchantable central stem of growing-stock trees cut or killed by logging.

Logging slash.—The net volume of unused portions of the unmerchantable (non-growing-stock) sections of trees cut or killed by logging.

Merchantable sections.—Refers to sections of the central stem of growing-stock trees that meet either pulpwood or saw-log specifications.

Net volume.—Gross volume less deductions for rot, sweep, or other defects affecting use for roundwood products.

Noncommercial species.—Tree species of typically small size, poor form, or inferior quality that normally do not develop into trees suitable for industrial roundwood products. Classified in volume tables as rough trees.

Nonforest land.—Land that has never supported forests, and land formerly forested where use for timber management is precluded by development for other uses. (Note: Includes areas used for crops, improved pasture, residential areas, city parks, improved roads of any width and adjoining clearings, powerline clearings of any width, and 1- to 39.9-acre areas of water classified by the Bureau of the Census as land. If intermingled in forest areas, improved roads and nonforest strips must be more than 120 feet wide and more than 1 acre to qualify as nonforest land.)

Nonforest land removals.—Net volume of trees on nonforest lands harvested for industrial roundwood products.

Poletimber.—A growing-stock tree at least 5.0 inches d.b.h. but smaller than sawtimber size (9.0 inches d.b.h. for softwoods, 11.0 inches d.b.h. for hardwoods).

Poletimber removals.—Net volume in the merchantable central stem of poletimber trees harvested for industrial roundwood products.

Primary wood-using mills.—Mills receiving roundwood or chips from roundwood for processing into products.

Primary wood-using mill residue.—Wood materials (coarse and fine) and bark generated at manufacturing plants from roundwood processed into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Rotten tree.—A tree that does not meet regional merchantability standards because of excessive unsound cull.

Rough tree.—A tree that does not meet regional merchantability standards because of excessive sound cull. Includes noncommercial tree species.

Roundwood.—Logs, bolts, or other round sections cut from trees (including chips from roundwood).

Sapling.—A live tree between 1.0 and 5.0 inches d.b.h.

Sapling removals.—Net volume in saplings harvested for industrial roundwood products.

Saw-log portion.—That portion of the central stem of sawtimber trees between the stump and the saw-log top.

Saw-log top.—The point on the central stem of sawtimber trees above which a saw log cannot be produced. The minimum saw-log top is 7.0 inches d.o.b. for softwoods and 9.0 inches d.o.b. for hardwoods.

Sawtimber removals.—As used in table 21, sawtimber removals refers to the net volume in the merchantable central stem of sawtimber trees harvested for industrial roundwood products. (Note: Includes the saw-log and upper stem portions of sawtimber trees.) When referring to the sawtimber volume removed from the timberland inventory as in table 19, sawtimber removals refers to the net volume in the saw-log portion of sawtimber trees harvested for roundwood products or left on the ground as harvest residue, and is usually expressed in thousands of board feet (International 1/4-inch rule).

Sawtimber tree.—A growing-stock tree containing at least a 12-foot saw log or two noncontiguous saw logs 8 feet or longer, and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches d.b.h. and hardwoods must be at least 11.0 inches d.b.h.

Sawtimber volume.—Net volume in the saw-log portion of sawtimber trees.

Softwoods.—Coniferous trees, usually evergreen, having needles or scale-like leaves.

Timber product output.—The volume of roundwood products produced from an area's forests.

Timberland.—Forest land that is producing, or is capable of producing, in excess of 20 cubic feet per acre per year of industrial roundwood products under natural conditions, is not withdrawn from timber utilization by statute or administrative regulation,

and is not associated with urban or rural development.

Tree.—A woody plant usually having one or more perennial stems, a more or less definitely formed crown of foliage, and a height of at least 12 feet at maturity.

Upper stem portion.—That portion of the central stem of sawtimber trees between the saw-log top and the minimum top diameter of 4.0 inches outside bark, or to the point where the central stem breaks into limbs.

Veneer log or bolt.—A log or bolt used in the production of plywood, finished panels, containers, or veneer sheets, both rotary cut and sliced.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

SOFTWOODS

Jack pine *Pinus banksiana*
Red pine *Pinus resinosa*
Eastern white pine *Pinus strobus*
Spruce
White spruce *Picea glauca*
Black spruce *Picea mariana*
Balsam fir *Abies balsamea*
Eastern hemlock *Tsuga canadensis*
Tamarack *Larix laricina*
Northern white-cedar *Thuja occidentalis*
Eastern redcedar *Juniperis virginiana*

HARDWOODS

White oak
White oak *Quercus alba*
Bur oak *Quercus macrocarpa*
Chinkapin oak *Quercus muehlenbergii*
Swamp white oak *Quercus bicolor*
Red oak
Northern red oak *Quercus rubra*
Black oak *Quercus velutina*
Northern pin oak *Quercus ellipsoidalis*
Hickory
Bitternut hickory *Carya cordiformis*
Pignut hickory *Carya glabra*
Shagbark hickory *Carya ovata*
White birch *Betula papyrifera*
Yellow birch *Betula alleghaniensis*
Hard maple
Black maple *Acer nigrum*
Sugar maple *Acer saccharum*
Soft maple
Red maple *Acer rubrum*
Silver maple *Acer saccharinum*

American beech *Fagus grandifolia*
 Ash
 Black ash *Fraxinus nigra*
 White ash *Fraxinus americana*
 Green ash *Fraxinus pennsylvanica*
 Balsam poplar *Populus balsamifera*
 Aspen
 Bigtooth aspen *Populus grandidentata*
 Quaking aspen *Populus tremuloides*
 Eastern cottonwood *Populus deltoides*
 American basswood *Tilia americana*
 Black walnut *Juglans nigra*
 Elm
 American elm *Ulmus americana*
 Rock elm *Ulmus thomasii*
 Slippery elm *Ulmus rubra*
 Other hardwoods
 Northern catalpa *Catalpa speciosa*
 Black cherry *Prunus serotina*
 River birch *Betula nigra*
 Black locust *Robinia pseudoacacia*
 Honeylocust *Gleditsia triacanthos*
 Red mulberry *Morus rubra*
 Butternut *Juglans cinerea*
 Black willow *Salix nigra*
 Boxelder *Acer negundo*
 Hackberry *Celtis occidentalis*

- Table 23.—Residues produced at primary wood-using mills by type of material, type of use, and Forest Survey Unit, Michigan, 1994

Table 1.--Number of active primary wood-using mills in
Michigan, 1977, 1984, 1988, 1990, 1992, and 1994

Kind of mill	1977	1984	1988	1990	1992	1994
Sawmills 1/						
Large 2/	20	26	31	26	30	36
Medium 3/	86	94	117	103	107	99
Small 4/	196	176	136	171	139	109
Total	302	296	284	300	276	244
Pulp mills 5/	8	9	12	12	11	11
Veneer mills	9	8	8	8	7	5
Other mills	19	26	32	35	23	24
Total	36	43	52	55	41	40
Total mills	338	339	336	355	317	284

1/ Mills persistently sawing 50 mbf or more annually.

(32 mills sawed under 50 mbf/year.)

2/ Annual lumber production in excess of 5 million board feet.

3/ Annual lumber production from 1 million to 5 million board feet.

4/ Annual lumber production from 50 thousand to 1 million board feet.

5/ Includes flake board plants after 1977, formerly reported in "other mills" category.

Table 2.--Industrial roundwood receipts by mill type,
Michigan, 1977, 1984, 1988, 1990, 1992, and 1994

(In million cubic feet)

1/ Product volumes converted to standard units of measure using regional conversion factors and to thousand cubic feet using factors from the Michigan Utilization Study of 1980													

1/ Product volumes converted to standard units of measure using regional conversion factors and to thousand cubic feet using factors from the Michigan Utilization Study of 1980

and other regional utilization studies.

2/ Thousand board feet, International 1/4-inch rule.

3/ Thousand cubic feet.

4/ Standard cords are 128 cubic feet consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

5/ Standard cords are 128 cubic feet consisting of 70 cubic feet of wood and 58 cubic feet of bark and air space.

* = Less than 1/2 unit of measure.

Rows and columns may not sum due to rounding.

1/ International 1/4-inch rule.

2/ Includes only logs and bolts shipped to Canadian mills for processing.

3/ Includes all veneer logs received at Iron Wood Products Co.; such receipts are
not shown before 1974.

1/ Suitable for chipping such as slabs, edgings, veneer cores, etc.

2/ Not suitable for chipping such as sawdust, veneer clippings, etc.

3/ Livestock bedding, mulch, small dimension, and specialty items.

Rows and columns may not sum due to rounding.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means of communication of program information (braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-2791.

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250, or call 1-800-245-6340 (voice), or 202-720-1127 (TDD). USDA is an equal employment opportunity employer.

Hackett, Ronald L.; Pilon, John.

1997. **Michigan timber industry—an assessment of timber product output and use, 1994.** Resour. Bull. NC-189. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Forest Experiment Station. 66 p.

Industrial roundwood production rose from 346.8 million cubic feet in 1992 to 386.9 million cubic feet in 1994. Pulpwood accounted for 62 percent of total roundwood production in Michigan in 1994—3.0 million cords. Saw-log production rose from 632 million board feet in 1992 to 658 million board feet in 1994. Logging residue generated in 1994 was estimated to be 4.8 million cubic feet.

KEY WORDS: Pulpwood, saw logs, veneer logs, residue, growing stock.
