FOREWORD

This bulletin reports findings of a survey of all primary wood-using mills in Wisconsin in 1999 and details the industry's size and composition, its use of roundwood, and its generation and disposition of wood residues. Such detailed information is necessary for intelligent planning and decisionmaking in wood procurement, forest resource management, forest industry development, and forest research.

Special thanks are given to the primary wood-using firms that responded to the survey and to the Wisconsin Department of Natural Resources for canvassing the respondents. Their cooperation is greatly appreciated.

All volumes are reported in product-specific standard units and/or cubic feet. Volumes reported by mills in nonstandard units were converted to standard units using regional conversion factors. Reported trends and changes in the primary wood-using industry in Wisconsin are based on comparisons with previous surveys of the State's primary wood-using industry conducted in 1981, 1986, 1988, 1990, 1994, and 1996. Row and column data of tables may not sum due to rounding, but data in each table cell are accurately displayed.

Wisconsin Timber Industry—An Assessment of Timber Product Output and Use, 1999

William H. Reading, IV and James W. Whipple

HIGHLIGHTS

PRIMARY TIMBER

INDUSTRY—INDUSTRIAL

ROUNDWOOD

- The number of large sawmills (mills sawing more than 5 million board feet/year) increased from 34 to 38 between 1996 and 1999 (table 1, fig. 1). At the same time, the number of medium-size sawmills (mills sawing between 1 million and 5 million board feet/year) fell from 106 to 73 (table 1, fig. 1). The number of small sawmills (mills sawing less than 1 million board feet/year) increased from 115 to 197 (table 1, fig. 1).
- In 1999, Wisconsin's primary wood-using industry processed more than 371 million cubic feet of roundwood—a decrease of 6 percent from 1996 levels (table 2, fig. 2).
- Industrial roundwood receipts by sawmills increased by 1 percent overall between 1996 and 1999 (table 2). Receipts of softwood roundwood by sawmills increased by 23 percent while hardwood receipts dropped by 2 percent.
- Industrial roundwood receipts by pulpwood mills decreased by 7 percent overall between 1996 and 1999 (table 2). Receipts of softwood roundwood decreased by 19 percent, accounting for most of the decrease. Hardwood receipts decreased by less than 1 percent.
- Hardwoods made up nearly three-quarters of the roundwood processed by the State's primary wood-using industry in 1999 (table 2). This is essentially unchanged from 1996.
- In 1999, 369.7 million cubic feet of industrial roundwood were harvested from Wisconsin forests (table 3). This figure is a slight increase from 1996 when 359.4 million cubic feet were harvested.
- Only four species groups, which accounted for 10 million cubic feet or more of harvest volume, had changes in harvest volume of ± 10 percent or more between 1996 and 1999. These were jack pine (-10 percent), red pine (+13 percent), soft maple (+32 percent), and hard maple (+15 percent) (table 3). The overall increase in harvest volume for all species was 3 percent between 1996 and 1999.
- In 1999, the percentage of industrial roundwood harvested to produce saw logs and pulpwood was virtually unchanged from 1996. In fact, the harvest level has been basically stable since the 1988 survey (table 3, fig. 3).
- Seventy percent of the total industrial roundwood production was harvested from the Northeast and Northwest Units (table 3, fig. 4). A further 21 percent came from the Central Unit.

About the Authors:

William H. Reading IV, Forester, received a B.S. in forest management in 1988 and an M.S. in forestry/forest mensuration in 1992 from Northern Arizona University. He worked as a consultant forester from 1992 to September 2000 and joined the USDA Forest Service in September 2000. He has worked for the Forest Inventory and Analysis Unit at the North Central Research Station since that time.

James W. Whipple, Wood Utilization Specialist, received his B.S. in forestry from Michigan Technological University in 1964. He joined the Wisconsin Department of Natural Resources as a field forester in July 1964 and has been a Utilization Specialist since 1970.

Figure 3.—*Distribution and level of industrial roundwood production, Wisconsin, 1999.*

Figure 4.—*Sources of industrial roundwood production by Fo Survey Unit, Wisconsin, 1999.*

PULPWOOD

- In 1999, Wisconsin's pulpwood production continued to fluctuate within the range of 3.0 and 3.5 million cords per year as it has since 1988 (table 4). This includes pulpwood produced from roundwood as well as mill residues from primary mills.
- Eighty-nine percent of the pulpwood produced in 1999 was produced from roundwood. The remainder came from primary mill residues (table 4).
- Aspen accounted for 36 percent of the total pulpwood production from roundwood from Wisconsin's forests in 1999 (table 4, fig. 5).
- Michigan was the largest export market for Wisconsin pulpwood roundwood and residues (table 5). Michigan received 206 thousand cords of wood material from Wisconsin in 1999. The next largest export market for Wisconsin pulpwood was Minnesota, which received just under 63 thousand cords.
- Wisconsin was a net importer of pulpwood roundwood in 1999 (fig 6). While Wisconsin's forests produced 2.9 million cords of roundwood for pulpwood (table 4), Wisconsin mills consumed 3.0 million cords of roundwood for pulpwood (table 7).

Figure 5.—Pulpwood production from roundwood by species group and survey year, Wisconsin, 1999.

Figure 6.—Net pulpwood exports by survey year, Wisconsin, 1999.

SAW LOGS

- Softwood saw log production from Wisconsin forests increased by 39 percent over 1996 (table 10, fig. 7), while receipts by Wisconsin sawmills increased by 25 percent. Harvests of red pine increased by 62 percent since 1996, while mill receipts increased by 56 percent.
- Hardwood saw log production dropped by 8 percent from 1996 (table 10), while mill receipts dropped by 7 percent. The largest changes in production came from aspen (-15 percent), red oak (-11 percent), white oak (-13 percent), and basswood (-25 percent). Mill receipts of aspen fell by 14 percent, red oak fell by 12 percent, and basswood declined by 26 percent.
- Combined hardwood/softwood saw log production fell by only 0.2 percent, while mill receipts fell by 2 percent (table 10). A major shift in the softwood/hardwood production ratio—from 0.200 to 0.302 indicates a change in demand by regional mills (fig. 8). The softwood/hardwood mill receipt ratio changed from 0.167 to 0.224 indicating a similar shift in demand from Wisconsin mills (table 10).

Figure 7.—Net exports of saw logs, Wisconsin, 1999.

Figure 8.—Ratio of softwood to hardwood production and receipts by survey year, Wisconsin.

- Minnesota was the largest export market for Wisconsin softwood saw logs, while Michigan was the largest export market for hardwood saw logs (table 11). Wisconsin mills utilized 74 percent of Wisconsin's softwood saw log production and 96 percent of its hardwood saw log production. Overall, 91 percent of the saw log volume produced on Wisconsin timberlands was utilized by Wisconsin mills.
- The largest supplier of both hardwood and softwood saw logs, other than Wisconsin forests, was Michigan (table 13).

VENEER LOGS

- Veneer log roundwood production increased from 33.6 million board feet in 1996 to 42.3 million board feet (table 14). While this is a large increase (26 percent), the 1999 production total was still less than the 52 million board feet harvested in both 1992 and 1994. Receipts of veneer logs by Wisconsin mills fell by 12 percent from 1996 to 45.8 million board feet in 1999.
- Wisconsin veneer log roundwood production is strongly oriented to hardwood species, accounting for 95 percent of production (table 15).

- Only 67 percent of the veneer log roundwood volume harvested from Wisconsin forests in 1999 were destined for Wisconsin mills (table 16). Sixty-one percent of veneer log roundwood volume consumed by Wisconsin mills was harvested in Wisconsin forests (table 18).

OTHER PRODUCTS

- Wisconsin forests produced 772 thousand cubic feet of cabin logs in 1999 (table 20). White pine was the most widely harvested species followed by red pine and northern white-cedar.
- Wisconsin forests produced 749 thousand posts in 1999 (table 21). The overwhelming majority (96 percent) of these posts were produced from red pine and northern white-cedar.

TIMBER REMOVALS

- The largest categories of removals from growing stock and non-growing stock were sawtimber (39 percent), logging slash (24 percent), and poletimber (22 percent) (fig. 9). The overall distribution of timber removals from the various

components of growing stock and non-growing stock changed very little from 1996.

- The percentage of harvested growing-stock volume that was sawtimber size vs. pole size varies widely by species (table 22, fig. 10). Among softwood species, jack pine, a species commonly used for pulpwood, had the lowest sawtimber-size percentage at 43 percent. White pine and red pine, more commonly used for lumber and cabin logs, had higher percentages of harvested volume classified as sawtimber (66 percent and 75 percent, respectively).
- Among hardwood species, sawtimber vs. poletimber percentages varied more widely (table 22). For paper birch, only 29 percent of the growing stock harvested was sawtimber size. Species that are highly prized for lumber and veneers, such as oak, cherry, and black walnut,

had 74 to 79 percent of their growing-stock volume harvested as sawtimber-size trees.

- The total volume of wood material harvested in 1999 for industrial roundwood was 517.2 million cubic feet (table 22). This is a slight increase from 1996 when 507.1 million cubic feet was harvested.

HARVEST RESIDUES

- One hundred forty-seven million cubic feet of harvest residues were generated by industrial roundwood harvesting in Wisconsin forests in 1999 (table 25). This is essentially unchanged from the 1996 figure.
- Seventy-nine percent of the harvest residues were from hardwood species and 21 percent were from softwood species (table 25).

Figure 9.—Distribution of timber removals for industrial roundwood by source of material, Wisconsin, 1999.

Figure 10.—Sawtimber percentage of major species, Wisconsin, 1999.

PRIMARY MILL RESIDUES

- Eighty-five percent of the mill residues were produced from hardwood roundwood; 15 percent came from softwood roundwood (table 25, fig. 11).
- Of softwood mill residues, 30 percent were used in producing fiber products (table 26). Of hardwood mill residues, 47 percent were used for fiber products.
- Fifty percent of softwood residues were used as industrial fuel at the mills that produced them (table 26). In contrast, only 19 percent of hardwood residues were used as industrial fuels.
- Only 2 percent of residues were not used (table 26, fig. 12).

Figure 11.—Distribution of residues generated by primary wood-using mills by type of residue and species, Wisconsin, 1999.

Figure 12.—Distribution of residues generated by primary wood-using mills by method of disposal, Wisconsin, 1999.

REGIONAL FACTS AND TRENDS

Northeast Unit

- Overall industrial roundwood production levels increased by 4 percent. Substantial increases occurred in the saw log, veneer log, and pulpwood categories. The most notable increases were in softwood saw logs (+66 percent) and hardwood pulpwood (+14 percent).
- The Northeast Unit produced 33 percent of the State's sawtimber, 37 percent of the veneer logs, 36 percent of the pulpwood, and 86 percent of the industrial fuelwood (table 3, fig. 13).
- The Northeast Unit has 33 of the sawmills that process more than 1 million board feet of saw logs per year.

Northwest Unit

- Overall industrial roundwood production levels dropped by 1 percent from 1996 to 1999.
- The Northwest Unit produced 24 percent of the sawtimber, 43 percent of the veneer logs, 39 percent of the pulpwood, and 12 percent of the industrial fuelwood (table 3, fig. 13).
- The Northwest has 23 of the sawmills that process more than 1 million board feet of saw logs per year.
- The Northwest Unit supports one board mill and three pulp mills.

Figure 13.—Industrial roundwood production by product and Forest Survey Unit, Wisconsin, 1999.

Central Unit

- Overall industrial roundwood production levels increased by 9 percent. The bulk of this increase was due to increases in saw log and pulpwood production.
- The Central Unit produced 22 percent of the sawtimber, 12 percent of the veneer logs, 21 percent of the pulpwood, and 1 percent of the industrial fuelwood (table 3, fig.13).
- The Central Unit has 26 of the sawmills that process more than 1 million board feet of saw logs per year.
- The Central Unit supports one board mill and nine pulp mills.

Southeast Unit

- Overall industrial roundwood production decreased by 9 percent from 1996 to 1999, mainly because of a large drop in pulpwood production and veneer log production.
- The Southeast Unit produced 5 percent of the saw logs and less than 1 percent of the veneer logs, pulpwood, and industrial fuelwood (table 3, fig.13).
- The Southeast Unit has 27 of the sawmills that process more than 1 million board feet per year.
- The Southeast Unit supports three pulp mills.

Southwest Unit

- Overall industrial roundwood production levels dropped by 14 percent from 1996 to 1999. This was mainly due to a large drop in saw log production, which was only partially offset by an increase in pulpwood production.
- The Southwest Unit produced 16 percent of the saw logs, 8 percent of the veneer logs, 3 percent of the pulpwood, and less than 1 percent of the industrial fuelwood (table 3, fig. 13).

APPENDIX

STUDY METHODS

This study was a cooperative effort of the Wisconsin Department of Natural Resources (WiDNR) and the North Central Research Station (NCRS). Using mail questionnaires supplied by NCRS and designed to determine the size and composition of Wisconsin's primary wood-using industry, its use of roundwood, and its generation and disposition of wood residues, the WiDNR canvassed all primary wood-using mills within the State. The WiDNR then followed up with non-responding mills through additional mailings, telephone calls, and personal contacts until it achieved a 100-percent response. Completed questionnaires were sent to NCRS for editing and processing.

As part of data editing and processing, all industrial roundwood volumes reported on the questionnaires were converted to standard units of measure using regional conversion factors. Timber removals by source of material and harvest residues generated during logging were estimated from standard product volumes using factors developed from logging utilization studies previously conducted by NCRS. Finalized data on Wisconsin's industrial roundwood receipts were loaded into a regional timber removals database and supplemented with data on out-of-State uses of Wisconsin's roundwood to provide a complete assessment of Wisconsin's timber product output.

DEFINITION OF TERMS

Board foot

Unit of measure applied to roundwood. It relates to lumber that is 1 foot long, 1 foot wide, and 1 inch thick (or its equivalent).

Bolt

A short log no more than 8 feet long, to be sawn for lumber, peeled or sliced for veneer, shaved for excelsior, or converted into shingles, cooperage stock, dimension stock, blocks, blanks, etc.

Central stem

The portion of a tree between a 1-foot stump and the minimum 4.0-inch top

diameter outside bark or the point where the central stem breaks into limbs.

Coarse mill residue

Wood residue suitable for chipping such as slabs, edgings, and veneer cores.

Commercial species

Tree species presently or prospectively suitable for industrial wood products. (Note: Excludes species of typically small size, poor form, or inferior quality such as hophornbeam, Osage-orange, and redbud.)

Cull removals

Net volume of rough and rotten trees, plus the net volume in sections of the

central stem of growing-stock trees that do not meet regional merchantability standards, harvested for industrial roundwood products.

Dead removals

Net volume of dead trees harvested for industrial roundwood products.

Diameter at breast height (d.b.h.)

The outside bark diameter at 4.5 feet above the forest floor on the uphill side of the tree. For determining breast height, the forest floor includes the duff layer that may be present, but does not include unincorporated woody debris that may rise above the ground line.

Fine mill residue

Wood residue not suitable for chipping such as sawdust and veneer clippings.

Forest land

Land at least 10 percent stocked by forest trees of any size, or formerly having had such tree cover, and not currently developed for nonforest use. (Note: Stocking is measured by comparing specified standards with basal area and /or number of trees, age or size, and spacing.) The minimum area for classification of forest land is 1 acre. Roadside, streamside, and shelterbelt strips of timber must have a crown width of at least 120 feet to qualify as forest land. Unimproved roads and trails, streams or other bodies of water, or clearings in forest areas shall be classed as forest if less than 120 feet wide.

Growing-stock removals

The growing-stock volume removed from the timberland inventory by harvesting industrial roundwood products. (Note: Includes sawtimber removals, poletimber removals, and logging residues.)

Growing-stock tree

A live timberland tree of commercial species that meets specified standards of size, quality, and merchantability. (Note: Excludes rough, rotten, and dead trees.)

Growing-stock volume

Net volume of growing-stock trees 5.0 inches d.b.h. and over, from 1 foot above the ground to a minimum 4.0-inch top diameter outside bark of the

central stem or to the point where the central stem breaks into limbs.

Hardwoods

Dicotyledonous trees, usually broad-leaved and deciduous.

Harvest residues

Total net volume of unused portions of trees cut or killed by logging. (Note: Includes both logging residues and logging slash.)

Industrial fuelwood

A roundwood product, with or without bark, used to generate energy at manufacturing facilities and schools, correctional institutions, or electric generating plants.

Industrial roundwood exports

The quantity of industrial roundwood harvested in a geographical area and transported to other geographical areas.

Industrial roundwood imports

The quantity of industrial roundwood received from other geographical areas.

Industrial roundwood products

Saw logs, pulpwood, veneer logs, poles, commercial posts, pilings, cooperage logs, particleboard bolts, shaving bolts, lath bolts, charcoal bolts, and chips from roundwood used for pulp or board products.

Industrial roundwood production

The quantity of industrial roundwood harvested in a geographic area plus all industrial roundwood exported to other geographical areas.

Industrial roundwood receipts

The quantity of industrial roundwood received by commercial mills in a geographic area plus all industrial roundwood imported from other geographical areas.

Industrial roundwood retained

The quantity of industrial roundwood harvested from and processed by commercial mills within the same geographical area.

International 1/4-inch rule

A log rule or formula for estimating the board foot volume of logs, allowing 1/2 inch of taper for each 4-foot length. The rule appears in a number of forms that allow for kerf. In this form, 1/4 inch of kerf is assumed. This rule is used as the USDA Forest Service standard log rule in the Eastern United States.

Limbwood removals

Net volume of all portions of a tree other than the central stem (including forks, large limbs, tops, and stumps) harvested for industrial roundwood products.

Logging residue

Net volume of unused portions of the merchantable central stem of growing-stock trees cut or killed by logging.

Logging slash

Net volume of unused portions of the unmerchantable (non-growing stock) sections of trees cut or killed by logging.

Merchantable sections

Sections of the central stem of growing-stock trees that meet either pulpwood or saw log specifications.

Net volume

Gross volume less deductions for rot, sweep, or other defects affecting use for roundwood products.

Noncommercial species

Tree species of typically small size, poor form, or inferior quality that normally do not develop into trees suitable for industrial roundwood products. Classified in volume tables as rough trees.

Nonforest land

Land that has never supported forests, and land formerly forested where use for timber management is precluded by development for other uses. (Note: Includes areas used for crops, active Christmas tree plantations, orchards, nurseries, improved pasture, residential areas, city parks, improved roads of any width and adjoining clearings, powerline clearings of any width, and 1- to 39.9-acre areas of water classified by the Bureau of the Census as land.) If intermingled in forest areas, unimproved roads and nonforest strips must be more than 120 feet wide and more than 1 acre to qualify as nonforest land.

Nonforest land removals

Net volume of trees on nonforest lands harvested for industrial roundwood products.

Poletimber

A growing-stock tree at least 5.0 inches d.b.h. but smaller than sawtimber size (9.0 inches d.b.h. for softwoods, 11.0 inches d.b.h. for hardwoods).

Poletimber removals

Net volume in the merchantable central stem of poletimber trees harvested for industrial roundwood products.

Primary wood-using mills

Mills receiving roundwood or chips from roundwood for processing into products such as lumber, veneer, and pulp.

Primary wood-using mill residue

Wood materials (coarse and fine) and bark generated at manufacturing plants that process industrial roundwood into principal products. These residues include wood products (byproducts) obtained incidental to production of principal products and wood materials not utilized for some product.

Rotten tree

A tree that does not meet regional merchantability standards because of excessive unsound cull.

Rough tree

A tree that does not meet regional merchantability standards because of excessive sound cull. Includes noncommercial tree species.

Roundwood

Logs, bolts, or other round sections cut

from trees (including chips from roundwood).

Sapling

A live tree between 1.0 and 5.0 inches d.b.h.

Sapling removals

Net volume in saplings harvested for industrial roundwood products.

Saw log

A log meeting minimum standards of diameter, length, and defect, sound and straight, and with a minimum diameter outside bark of 7.0 inches for softwoods and 9.0 inches for hardwoods, or other combinations of size and defect specified by regional standards.

Saw log portion

That portion of the central stem of sawtimber trees between the stump and the saw log top.

Saw log top

The point on the central stem of sawtimber trees above which a saw log cannot be produced. The minimum saw log top is 7.0 inches diameter outside bark for softwoods and 9.0 inches diameter outside bark for hardwoods.

Sawtimber tree

A growing-stock tree containing at least a 12-foot saw log or two noncontiguous saw logs 8 feet or longer and meeting regional specifications for freedom from defect. Softwoods must be at least 9.0 inches d.b.h. and hardwoods must be at least 11.0 inches d.b.h.

Sawtimber volume

Net volume in the saw log portion of sawtimber trees.

Softwoods

Coniferous trees, usually evergreen, having needles or scale-like leaves.

Timber product output

The volume of roundwood products produced from an area's forests.

Timberland

Forest land that is producing, or is capable of producing, in excess of 20 cubic feet per acre per year of industrial roundwood products under natural conditions, is not withdrawn from timber utilization by statute or administrative regulation, and is not associated with urban or rural development.

Tree

A woody plant usually having one or more perennial stems, a more or less definitely formed crown of foliage, and a height of at least 12 feet at maturity.

Upper stem portion

That portion of the central stem of sawtimber trees between the saw log top and the minimum top diameter of 4.0 inches outside bark, or to the point where the central stem breaks into limbs.

Veneer log

A log or bolt used in the production of plywood, finished panels, containers, or veneer sheets, both rotary cut and sliced.

COMMON AND SCIENTIFIC NAMES OF TREE SPECIES MENTIONED IN THIS REPORT

SOFTWOODS

Pine

Jack pine	<i>Pinus banksiana</i>
Red pine	<i>Pinus resinosa</i>
Eastern white pine	<i>Pinus strobus</i>

Spruce

White spruce	<i>Picea glauca</i>
Black spruce	<i>Picea mariana</i>

Balsam fir	<i>Abies balsamea</i>
------------------	-----------------------

Eastern hemlock	<i>Tsuga canadensis</i>
-----------------------	-------------------------

Tamarack	<i>Larix laricina</i>
----------------	-----------------------

Northern white-cedar	<i>Thuja occidentalis</i>
----------------------------	---------------------------

Eastern redcedar	<i>Juniperis virginiana</i>
------------------------	-----------------------------

HARDWOODS

White oak

White oak	<i>Quercus alba</i>
Bur oak	<i>Quercus macrocarpa</i>
Chinkapin oak	<i>Quercus muehlenbergii</i>
Swamp white oak	<i>Quercus bicolor</i>

Red oak

Northern red oak	<i>Quercus rubra</i>
Black oak	<i>Quercus velutina</i>
Northern pin oak	<i>Quercus ellipsoidalis</i>

Hickory

Bitternut hickory	<i>Carya cordiformis</i>
Pignut hickory	<i>Carya glabra</i>
Shagbark hickory	<i>Carya ovata</i>

Birch

Paper birch	<i>Betula papyrifera</i>
Yellow birch	<i>Betula alleghaniensis</i>

Hard maple	
Black maple	<i>Acer nigrum</i>
Sugar maple	<i>Acer saccharum</i>
Soft maple	
Red maple	<i>Acer rubrum</i>
Silver maple	<i>Acer saccharinum</i>
American beech	<i>Fagus grandifolia</i>
Ash	
Black ash	<i>Fraxinus nigra</i>
White ash	<i>Fraxinus americana</i>
Green ash	<i>Fraxinus pennsylvanica</i>
Balsam poplar	<i>Populus balsamifera</i>
Aspen	
Bigtooth aspen	<i>Populus grandidentata</i>
Quaking aspen	<i>Populus tremuloides</i>
Eastern cottonwood	<i>Populus deltoides</i>
American basswood	<i>Tilia americana</i>
Black walnut	<i>Juglans nigra</i>
Elm	
American elm	<i>Ulmus americana</i>
Rock elm	<i>Ulmus thomasii</i>
Slippery elm	<i>Ulmus rubra</i>
Other hardwoods	
Northern catalpa	<i>Catalpa speciosa</i>
Black cherry	<i>Prunus serotina</i>
River birch	<i>Betula nigra</i>
Black locust	<i>Robinia pseudoacacia</i>
Honeylocust	<i>Gleditsia triacanthos</i>
Red mulberry	<i>Morus rubra</i>
Butternut	<i>Juglans cinerea</i>
Black willow	<i>Salix nigra</i>
Boxelder	<i>Acer negundo</i>
Hackberry	<i>Celtis occidentalis</i>

¹ Annual lumber production over 5 million board feet.

² Annual lumber production from 1 million to 5 million board feet.

³ Annual lumber production less than 1 million board feet.

⁴ Includes particleboard plants: OSB, waferboard, etc.

Table 2.-- Industrial roundwood receipts by type of mill in Wisconsin,
1986, 1988, 1990, 1992, 1994, 1996, 1999

¹ Standard cords are 128 cubic feet, consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

² Includes only those counties that supplied pulpwood in 1999

Rows may not sum due to rounding.

* = Less than 500 cords.

¹ Standard cords are 128 cubic feet, consisting of 79 cubic feet of wood and 49 cubic feet of bark and air space.

² Includes logs, bolts, and wood residue used in manufacturing particleboard and waferboard after 1979.

Rows may not sum due to rounding.

0=less than 50 tons.

¹ Suitable for chipping such as slabs, edgings, veneer cores, etc.

² Not suitable for chipping such as sawdust, veneer clippings, etc.

³ Livestock bedding, mulch, small dimension, and specialty items.

Rows and columns may not sum due to rounding.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, gender, religion, age, disability, political beliefs, sexual orientation, and marital or family status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD).

To file a complaint of discrimination, write USDA, Director, Office of Civil Rights, Room 326-W, Whitten Building, 14th and Independence Avenue, SW, Washington, DC 20250-9410, or call (202) 720-5964 (voice or TDD). USDA is an equal opportunity provider and employer.

Reading, William H., IV; Whipple, James W.

2003. **Wisconsin timber industry—an assessment of timber product output and use, 1999.** Resour. Bull. NC-218. St. Paul, MN: U.S. Department of Agriculture, Forest Service, North Central Research Station. 91 p.

Discusses recent Wisconsin forest industry trends; production and receipts of pulpwood; and production of saw logs, veneer logs, and other timber products in 1999. Reports on logging residue, on wood and bark residue generated at primary wood-using mills, and on disposition of mill residues.

KEY WORDS: Industrial roundwood, pulpwood, saw logs, veneer logs, residue

MISSION STATEMENT

We believe the good life has its roots in clean air, sparkling water, rich soil, healthy economies and a diverse living landscape. Maintaining the good life for generations to come begins with everyday choices about natural resources. The North Central Research Station provides the knowledge and the tools to help people make informed choices. That's how the science we do enhances the quality of people's lives.
