SOUTHERN PULPWOOD PRODUCTION, 1967

Noel D. Cost

SOUTHEASTERN FOREST EXPERIMENT STATION
Asheville, North Carolina

and

SOUTHERN FOREST EXPERIMENT STATION
New Orleans, Louisiana

of the

Forest Service, U. S. Department of Agriculture

in cooperation with

SOUTHERN PULPWOOD CONSERVATION ASSOCIATION
Atlanta, Georgia

1968

PULPWOOD PRODUCTION IN THE SOUTH leveled off slightly in 1967 but still established another record high of 33,651,100 cords—63 percent of the Nation's total. Significant gains were noted in the use of residues, whereas roundwood production showed a slight decrease for the first time in 10 years. At the year's end, there were 92 mills in operation in the South with a total daily pulping capacity exceeding 70,000 tons, and eight new mills now under construction will boost the total daily capacity by 5,300 tons. Eight mills outside the region also used wood harvested in the South in 1967.

In 1967, pulpwood produced in the South exceeded the previous record production in 1966 by 2 percent—an increase that is substantially below the average annual increase of 6 percent which had prevailed over the 1962-66 period. The slowdown was apparently a response to the general adjustments and slackening in economic activity in the early months of 1967, but pulpwood production will probably resume the faster upward trend of recent years.

Nevertheless, when both roundwood and residues are included, gains in pulpwood production were reported in 7 of the 12 southern states (table 1). Alabama had the largest increase, 342,000 cords, followed by North Carolina with an increase of 104,300 cords. The largest decline was in Florida, where production was down 64,300 cords, or 2 percent. Production was also off slightly in Louisiana and Mississippi, but remained about the same in Georgia and Virginia. Georgia continued to lead the region in total production with over 6.3 million cords.

Table 1. Pulpwood production in the South during 1967 and change since 1966

State	Round pulpwood and residues	Change
	Thousand cords	Percent

Texas	1,993.1	+ 5
Virginia	2,358.9	(¹)
All States	33,651.1	+ 2

¹ Less than 0.5 percent.

At the county level, three counties in Alabama had the highest pulpwood production: Baldwin County was the leader with 221,182 cords, Washington County second with 203,165 cords, and Choctaw County third with a total output of 192,430 cords. Across the South, over 100,000 cords each were produced in 41 counties, as compared to 43 counties in 1966.

Pulpwood from residues of other primary wood-using plants accounted for all of the increase and comprised over 19 percent of total production in 1967. There was a small decrease in roundwood production for the first time in 10 years. Of the 27.2 million cords of roundwood harvested in 1967, 76 percent was pine and 24 percent hardwood.

The growth of the southern pulpwood industry over the past 10 years has been remarkable. From 1957 to 1967, annual pulpwood production in the South rose from 19.8 million cords to 33.7 million cords—an increase of 70 percent (fig. 1). Over the same period, hardwood roundwood production has climbed from 2.9 million cords to 6.4 million cords. One of

Table 2. Round pulpwood production in the South, by State and species group, 1967

State	All species	Pine	Hardwood

Tennessee	336.5	157.6	178.9	10.8	122.9	45.2
Texas	1,409.9	1,087.3	322.6	106.7	166.9	49.0
Virginia	1,898.9	1,230.9	668.0	103.3	331.4	233.3
All States	27,172.1	20,764.6	6,407.5	2,215.2	2,443.3	1,749.0

the most significant aspects of the increase in hardwood production is the industry's use of a greater proportion of oaks and other hard-

Figure 1. Pulpwood production in the South by pine and hardwood roundwood and residues.

textured species. Oaks accounted for 38 percent of the total roundwood production of hardwood in 1967, and exceeded the output of gums for the second consecutive year (table 2). Use of residues for pulpwood in the South during the past decade has increased steadily, resulting in a fivefold increase over this relatively short span of time. Although it is becoming increasingly more difficult to separate the use of residues from roundwood, the fact remains that better utilization has played and will continue to play an important role in the region's ability to produce a greater share of the Nation's total pulpwood production. The

industry has done very well in adapting its wood requirements to the available sources of wood in a region which produced 63 percent of the Nation's domestic pulpwood in 1967.

During the last 10 years, pulpmills have increased in size and number. The combined daily pulping capacity of the southern pulpmills, for example, increased from 40,997 tons in 1957 to 70,527 tons in 1967 (fig. 2). With

Figure 2. Daily pulping capacity in the South by State, 1957-1967.

the continued growth in capacity, there has been a trend toward larger mills during the past decade. The average daily pulping capacity is now 767 tons, as compared to 569 tons in 1957. Of the 92 pulpmills in the South today, 23 have daily pulping capacities exceeding 1,000 tons, compared to 10 out of 72 mills in 1957. Over the entire 10-year period, more than one-half of the total expansion has taken place in Georgia, Alabama, and Texas.

During 1967, establishment of six new mills, together with expansion of existing facilities, boosted the South's pulping capacity by more than 5 percent. At the end of the year, eight new mills were under construction in the South. Two mills are being erected in Louisiana; and Alabama, Arkansas, Georgia, Mississippi, North Carolina, and South Carolina each has one under construction. When these mills begin operating, their combined pulping capacity is expected to total over 5,300 tons per day. With the addition of more mills and enlargement of existing facilities each year, the demand for southern pulpwood is likely to continue its rapid rate of increase.
