of the

**Forest Service, U. S. Department of
Agriculture**

in cooperation with the

AMERICAN PULPWOOD ASSOCIATION

1976

Southern counties.

HIGHLIGHTS—Southern pulpwood production in 1975 dropped a record 14 percent from the previous year. A 16-percent drop in roundwood accounted for over 80 percent of the total decline. Usable wood residues dropped 9 percent, primarily from hardwoods. Of the 42.3 million cords produced, 30 million were roundwood and 12 million were residues. Pulping capacity for the region increased 2 percent to 96,555 tons per day.

Reflecting a sluggish U.S. and world economy, southern pulpwood production in 1975 dropped almost 7 million cords, or 14 percent, from the previous year. Total production amounted to 42.3 million cords (table 1), slightly more than in 1970. Three states—Alabama, Georgia, and Mississippi—absorbed 49 percent of the decline but remained the leading producers in the South. Their combined production provided over 40 percent of the total. Georgia remained the largest pulpwood producer with almost 7 million cords, followed by Alabama with 6.3 million.

Roundwood production was slightly over 30 million cords, with softwood, primarily southern yellow pine, comprising about three-fourths of the total (table 2). Of the hardwood production, oaks made up 46 percent, while gums and other hardwoods each made up 27 percent. Regionwide, roundwood production dropped by 16 percent (table 3). Production of softwood dropped 13 percent, or 3.4 million cords, while hardwood dropped 2.1 million cords. All states reported declines except Tennessee, where a 21-percent increase in hardwoods accounted for an overall increase of 8 percent.

Use of wood residues for pulping declined 9 percent but still accounted for almost 30 percent of total production (tables 4 and 5). Output declined in all states except Arkansas and Mississippi, where increases of 9 and 7 percent were reported. The drop in hardwood production accounted for almost two-thirds of the decline in residues. Production of chips was

Table 1.--Pulpwood production in the South during 1975, and change since 1974

State	Pulpwood	Change
	Thousand cords	Percent

Virginia	2,336.5	-11
All States	42,335.6	-14

down slightly, while other residues dropped over 40 percent.

The Midsouth led the Southeast in pulpwood production by 3.3 million cords (table 6). For the past 6 years the Midsouth has produced more pulpwood than the Southeast, but the Southeast has led in producing softwood roundwood. In 1975, the Midsouth led in all categories of pulpwood production.

In 1975, three counties in the South produced over 200,000 cords of round pulpwood. Taylor County, Florida, led with 228,344 cords, followed by Ashley County, Arkansas, with

223,621 and Choctaw County, Alabama, with 212,579. The number of counties or parishes with roundwood production of more than 100,000 cords declined from 91 in 1974 to 49 in 1975 (county production tables 7-18). Over three-fourths were located in the Midsouth. Twenty-seven counties or parishes reported softwood production of over 100,000 cords: Louisiana led with nine parishes; Texas reported eight counties; and Alabama reported four. Choctaw County, Alabama, was the only county in the South to produce more than 100,000 cords of hardwood.

The completion of two new mills and the

expansion of several others resulted in a 2-percent increase in pulping capacity for the South, despite the closing of two mills. Arkansas and South Carolina accounted for over 90 percent of the increase. Total pulping capacity in the South reached 96,555 tons per day. In 1975, there were 113 mills operating in the region, and 12 mills outside the region used southern pulpwood (table 19).

Proposed construction of several new mills in the South was postponed because of poor market conditions and extreme inflation. Only one mill was being rebuilt in 1975 (table 20).

Bellamy, Thomas R.

1976. Southern pulpwood production, 1975. USDA For. Serv. Resour. Bull. SE-37, 21 p. Southeast. For. Exp. Stn., Asheville, N.C.

Southern pulpwood production in 1975 dropped a record 14 percent from the previous year. A 16-percent drop in roundwood accounted for over 80 percent of the total decline. Usable wood residues dropped 9 percent, primarily from hardwoods. Of the 42.3 million cords produced, 30 million were roundwood and 12 million were residues. Pulping capacity for the region increased 2 percent to 96,555 tons per day.

Keywords: Roundwood, residues, pulpmills, pulping capacity.

The Forest Service, U. S. Department of Agriculture, is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.
