and Richard W. Haynes

Authors

JOHN T. CHMELIK was a forester, and **DAVID J. BROOKS** and **RICHARD W. HAYNES** are research foresters, Forest Sciences Laboratory, P.O. Box 3890, Portland, Oregon 97208-3890. Chmelik is currently at the University of Washington, Seattle.

Abstract

Chmelik, John T.; Brooks, David J.; Haynes, Richard W. 1989. United States trade in forest products, 1978 to 1987. Gen. Tech. Rep. PNW-GTR-240. Portland, OR: U.S. Department of Agriculture, Forest Service, Pacific Northwest Research Station. 102 p.

Tables summarize volume and unit value of United States trade in forest products. Import and export data are shown for 18 groups of commodities aggregated from 800 individual commodity items; original data were collected and reported by the U.S. Department of Commerce. Data given for each commodity group include detail on trading partners and information on shipments through four regional aggregations of U.S. Customs Service Districts.

Keywords: Imports, exports, customs districts, trading partners, forest products.

Introduction

The United States is the world's leading producer and consumer of forest products; the United States is also the world's leading importer of forest products and is second only to Canada as an exporter of forest products. In 1987 the total value of U.S. imports and exports of forest products exceeded \$23 billion, slightly more than 3 percent of all merchandise trade. The United States accounts for about 20 percent of world imports of forest products and more than 10 percent of world exports of forest products. The United States is prominent as either a supplier or a market for almost all countries involved in forest products trade.

This report summarizes United States forest products trade for 1978-87. Data were retrieved from U.S. Department of Commerce records with the CENSUS computer program.¹ Trading partners were grouped into 10 regions, some of which are individual countries (appendix 1). Districts of the U.S. Customs Service were grouped into four regions: Northern, Southern, Pacific Northwest, and Other Western (see appendix 2). Because U.S. Department of Commerce data report only external trade, port of departure or entry does not always indicate the U.S. origin of exports (point of production) or the final destination in the United States of imports (point of consumption). Nevertheless, regional detail in U.S. trade data does reflect, by implication, broad patterns in both production and consumption.

Department of Commerce trade data include considerable detail under the general category "wood and paper products." Under the Department's seven-digit commodity code---the most detailed data available---this category includes nearly 500 import items (TSUSA classification) and over 300 export items (Schedule B classification). In this report we include only trade in raw material (logs and wood chips) and processed forest products (lumber, veneer, panels, pulp, paper and board products).² Commodities such as window frames, prefabricated housing components, printed papers, and books are excluded in the compilations reported here.

¹ Trade and other data of the U.S. Department of Commerce are available through the National Institutes of Health (NIH) computer system. Information about NIH computer accounts is available from Project Control Office, DCRT, Building 12A Room 3009, National Institutes of Health, Bethesda, MD 20892. The CENSUS program is one data retrieval routine in the COMPRO system. Information on COMPRO and CENSUS is available from U.S. Department of Commerce, Hoover Building H-3008, 14 Constitution Ave., Washington, DC 20230.

² Because waste paper is important as a raw material in pulp and paper production, we include data on its trade.

To simplify the trade data, we aggregated individual items at the seven-digit level into 18 commodity groups. The composition of groups was based largely on our own use of these data in large-scale analysis of U.S. trade in forest products. These commodity groups are more or less consistent with those adopted by international agencies for reporting trade (such as the Food and Agriculture Organization, listed in "Related Publications"). The product composition of the aggregated commodities is shown in appendix 3. In summary tables (tables 1-8), the commodity groups are combined into two broad groups representing "sectors" of the forest products industry: solid wood products (logs, lumber, and panel products) and fiber products (wood chips, waste paper, wood pulp, and paper products). Trade data in this report are reported in quantity (in units of record) and in unit value. Volume data were not converted to a common unit; therefore only values are aggregated across all products. Values are displayed in the summary tables.

Readers are cautioned that unit values should not be interpreted as accurate indicators of prices. Unit values for individual trade flows, especially those involving small volumes, frequently vary widely within a year, across origins or destinations, and through time. Because the aggregate commodities reported here are composed of a wide range of individual products, the variation in unit values is not surprising. An exceptionally high (or low) unit value may result from a shipment composed entirely of one high (or low) valued item. Differences in unit values among trading partners and changes in unit values over time may result from changes in the composition of the aggregation. In this report we have not edited or suppressed data on unit value, even when individual items or patterns appear extraordinary.

Tables reporting imports (tables 1, 3-5, and tables 9-42 in appendix 4) include all imports, those intended for consumption by individuals or in manufacturing, and those destined for further export. The values shown for imports are those reported at the point of entry and include shipping charges (C.i.f. values). Tables reporting exports (tables 2, 6-8, and tables 43-77 in appendix 4) include only items originating in the United States; these are "domestic exports" and exclude exports of goods previously imported and not subject to further manufacture. Values of exports are those declared at the point of export and include inland transportation costs (F.a.s. values).

Trade data on United States forest products are also reported in other publications (see "Related Publications"). Warren reports export data for some commodity groups, customs districts, and trading partners. Ulrich reports imports and exports of all forest products and reports some trade in commodities. Data on forest products trade are also reported periodically by Federal agencies (U.S. Department of Agriculture and U.S. International Trade Commission), by forest industry associations (National Forest Products Association), and in commercial publications (Random Lengths Publications). All these publications are compiled from the same U.S. Department of Commerce data used for this report. This report, however, is the only publication whose comprehensive summary of forest products imports and exports includes information on commodities, customs regions, and trading partners. Readers comparing the data here to those in other reports are reminded that inconsistencies will result from the use of different commodity groups, different classifications (total exports, for example), or alternative values (customs value for imports, for example). Appendixes 1-3 document what is reported here and facilitate comparisons.

Highlights: Trade by Ocean Basin

The value of U.S. forest products is aggregated into three regions of origin (table 1) and three regions of destination (table 2) that broadly summarize the pattern of U.S. trade. Trading partners other than Canada were grouped according to the ocean across which trade occurs. This "ocean basin" view reflects the importance of U.S. trade with Canada and, to a large extent, the relative importance of eastern and western offshore markets to U.S. producers. The most important component of U.S. imports (table 1) is intra-North America; the U.S. trade with Canada is also the largest bilateral exchange of forest products in the world. United States imports from Canada account for more than 15 percent of all world imports of forest products. Trade in the Atlantic Basin was the second most important component of U.S. imports in 1987. Growth in imports of fiber products from Europe and Latin America increased this trade from 6 percent of total imports in 1978 to 17 percent in 1987. Pacific Basin trade is a minor part of U.S. imports and declined in relative importance between 1978 and 1987.

Nearly 90 percent of U.S. exports of forest products go to markets in either the Atlantic or the Pacific Basin (table 2). Attention has focused in recent years on the emergence of Pacific Basin countries as U.S. trading partners; this attention has included trade in forest products. Exports to Pacific Basin countries (of which softwood logs and lumber are especially important), dominate trade in solid wood products. Pacific Basin markets for fiber products also increased in importance between 1978 and 1987. Pacific Basin trade accounted for nearly 50 percent of total U.S. exports of forest products. Atlantic Basin markets, however, were the destination of 40 percent of U.S. shipments in 1987 and remain the dominate region for U.S. exports of fiber products, although by a declining margin.

Highlights: Imports

In 1987, United States imports of forest products totaled \$13.8 billion, an increase of more than 75 percent from 1978 (fig. 1 and table 3). In constant dollars, the value of forest products imports increased by 20 percent between 1978 and 1987. Imports of solid wood products totaled \$4.9 billion in 1987 (table 4), and imports of fiber products totaled nearly \$9 billion (table 5). Figure 1 illustrates the shift in the composition of forest products imports that took place over this period. Increased imports of fiber products accounted for most of the increase in total imports between 1978 and 1987; fiber products were 65 percent of total forest products imports in 1987 compared to 50 percent in 1978.

Trade with Canada dominates U.S. imports of forest products. Canada accounted for 77 percent of imports (by value) in 1987, contributing nearly equal shares of both solid wood and fiber products imports. In 1978, however, Canada was the source of 86 percent of all forest products imports. The modest diversification in suppliers resulted from a combination of increased U.S. demand for fiber products, the development of new pulping capacity in Latin America, and exchange rates that reduced the relative cost of European products in U.S. markets. Nevertheless, Canada supplied 99 percent of U.S. softwood lumber imports, 87 percent of wood pulp imports, and 96 percent of newsprint imports in 1987.

Source: United States Department of Commerce.

Trade with Europe accounted for roughly 10 percent of total imports in 1987, up from 3 percent in 1978. Imports of fiber products (especially wood pulp, and printing and writing paper) account for nearly all this trade and are the source of the growth in trade with Europe from 1978 to 1987. As with imports of most commodities from most regions, almost all the growth in trade occurred during the recovery from the 1982 U.S. recession. Strong economic growth coupled with favorable exchange rates for U.S. consumers contributed to 20 percent annual increases in imports in 1983 and 1984.

Latin America accounted for 5 percent of total imports in 1987 compared to 2 percent in 1978. Fiber products accounted for more than half (by value) of U.S. imports from Latin America; the value of fiber products shipments from Latin America to the United States increased more than tenfold between 1978 and 1987. Imports of wood pulp from Latin America were negligible in 1978 but 6 percent of total wood pulp imports in 1987. The United States also imports a wide range of solid wood products from this region, including hardwood and softwood lumber and veneer-based panels. Brazil accounts for half, and Mexico accounts for one-third of U.S imports from Latin America.

The share of U.S. imports originating in Asia, including Japan and the People's Republic of China, declined from 9 percent in 1978 to 7 percent in 1987, although the total value in 1987 was slightly higher than in 1978. Imports from Asia are predominantly solid wood products, especially hardwood plywood and veneer. Between 1978 and 1987, however, fiber product shipments from Asia to the United States increased from less than 5 percent to 26 percent of the total value of all forest products shipments from Asia.

Three commodities--softwood lumber, wood pulp, and newsprint---accounted for nearly 67 percent (by value) of all forest products imports in 1987. Imports of these commodities were 75 percent of the total in 1978. Softwood lumber accounted for 60 percent of all solid wood products imports in 1987 and 67 percent of the total in 1978. Within the solid wood sector, imports of particleboard (a category that includes waferboard and oriented strand board) and imports of softwood plywood increased substantially.

The quantity of all fiber products imported in 1987 was unprecedented. More than 17 million tons of wood pulp, newsprint, printing and writing paper, and other paper and paperboard were imported, a 35 percent increase over the quantity imported in 1978. Newsprint accounted for a slightly smaller share of fiber products imports in 1987 compared to 1978, in terms of both quantity and value, although it remained the largest single commodity imported. Imports of printing and writing paper other than newsprint, and imports of other paper and paperboard products more than doubled during this period.

The majority of forest products imports entered through northern customs districts, largely as a consequence of the overwhelming importance of Canada as a source. Trade between Canada and the Northern and Pacific Northwest customs regions accounted for 70 percent of all imports. The pattern of imports also reflects, to some extent, the distribution of the U.S. population and patterns of domestic production and consumption. The points of entry of imports, however, provide only indirect evidence of regional dependence on foreign production.

Highlights: Exports

In 1987 the United States exported forest products valued at just over \$9 billion, an increase of more than 100 percent from 1978 and the highest level for the period. The previous high was \$7.8 billion in 1980 (table 6, and fig. 2). Exports of solid wood products were \$3.5 billion, 38 percent of the total in 1987 (table 7); exports of fiber products were \$5.7 billion (table 8). In constant dollars the value of exports increased nearly 40 percent between 1978 and 1987. During this period exports of fiber products accounted for an increasing share of total forest products exports (fig. 2), a pattern similar to that shown in imports (fig. 1).

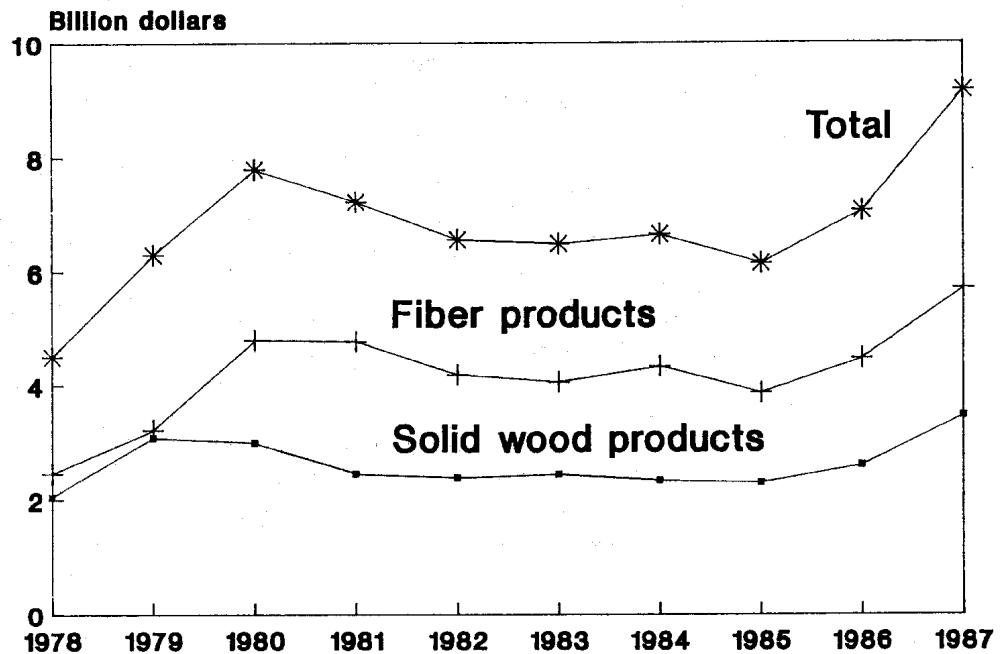

Figure 2---Value of U.S. forest products exports, 1978-87.

Japan is the largest single market for U.S. exports of forest products; in 1987 nearly 30 percent of all exports went to Japan. Japan purchased more than 45 percent of U.S. solid wood exports, most of which was softwood logs from the Pacific Northwest. In spite of being the largest foreign supplier of forest products to the U.S. market, Canada is the second largest single-country market for U.S. exports; 11 percent of all exports went to Canada in 1987. The share of U.S. exports going to Canada and Japan declined slightly between 1978 and 1987 as exports to other Asian countries---including the People's Republic of China---increased 400 percent, and exports to Latin America more than doubled. Most of the growth in U.S. exports to Latin America occurred, however, between 1978 and 1981. Between 1981 and 1986 forest products exports to Latin America fluctuated around \$1 billion; exports increased to \$1.3 billion in 1987. Over half of U.S. exports to Latin America go to Central America, the majority to Mexico.

Softwood logs accounted for 17 percent of the value of U.S. forest products exports in 1987, down from nearly 25 percent in 1978. Nevertheless, the volume of softwood log exports in 1987---nearly 4 billion board feet---was unprecedented. The decline in the relative importance of log exports is attributable to weak prices for raw materials and to faster growth in exports of other commodities. Exports of wood pulp nearly tripled in value between 1978 and 1987 and increased in quantity by nearly 90 percent; wood pulp exports in 1987 were at record levels in nearly all markets. Wood pulp accounted for 25 percent of U.S. exports in 1987; other paper and board products accounted for 35 percent of total forest products exports.

The regional pattern of exports shown in tables 6-8 reflects both the regional distribution of the U.S. forest products industry and proximity to markets. Customs districts in two regions, the Pacific Northwest and the Southern, account for equal shares of more than 75 percent of U.S. forest products exports (table 6). Exports from the Pacific Northwest are predominantly solid wood products (table 7) while those from the Southern region are predominantly fiber products (table 8). Most shipments to Latin American and European markets originate from Southern districts, reflecting both locational advantage and the nature of regional production (a concentration of U.S. pulp and paper production). Similarly, the majority of shipments to Pacific Rim markets---and nearly all solid wood exports to those markets---originate from Pacific Northwest districts.

Table 6--Value of all forest products exports from U.S. Customs Districts to selected destinations, 1978-87

Highlights: Net Trade

The pattern of forest products trade between 1978 and 1987 was influenced by two major factors: the exchange value of the U.S. dollar, and economic activity in U.S. and foreign markets. These factors are not independent, and both vary considerably among U.S. trading partners. The value of the U.S. dollar relative to the currencies of most U.S. trading partners was at its lowest point for this period in 1979 and 1980; between 1981 and 1984 the dollar increased sharply in value against almost all major currencies. Gains were particularly strong against European currencies; a more modest, but important revaluation of the U.S. dollar occurred in the Japanese and Canadian markets. Aggressive intervention on the part of central banks in a number of countries began to reverse these gains in 1985. Only in late 1986, however, did the value of the dollar relative to most currencies begin to approach exchange rates observed in 1981.

The revaluation of the dollar in the early 1980's coincided with a sharp downturn in economic activity, first in the United States and then in a number of important markets for U.S. forest products. The 1982 recession in the United States had a major effect on U.S. imports: forest products imports were at their lowest point for the period in 1982. This economic slump was echoed throughout the global economy in various degrees and extended well beyond 1982. Economic recovery was more rapid and stronger in Asian and European markets than in Latin America, but economic growth from 1981 to 1985 was generally less than robust in many markets. The combination of a strong dollar, an expanding U.S. economy, and relatively weak foreign markets led to a sharp increase in the U.S. trade deficit. The forest products trade deficit (fig.3) mirrored a similar increase in the deficit in trade in all commodities. The forest products trade deficit in 1985-86 was unprecedented, but forest products accounted for less than 5 percent of the total merchandise trade deficit in those years. In constant dollars the forest products trade deficit was slightly lower in 1987 than in 1978.

In 1987 the United States was a net importer of softwood lumber, hardwood veneer and plywood, particleboard, insulating board, hardboard, newsprint, and other printing and writing papers. Commodity categories in which the United States was a net exporter included logs (both hardwood and softwood), hardwood lumber, softwood veneer and plywood, industrial packaging paper and board ("other paper and paperboard"), and wastepaper. In 1978 the United States was a net importer of 1.4 million tons of wood pulp; in 1987, however, exports of wood pulp nearly equaled imports in quantity and exceeded imports in value.

The U.S. forest products trade deficit with Canada was \$9.6 billion in 1987. This was the highest deficit for the entire period, although the forest products share of the total bilateral deficit with Canada declined to roughly one-third in 1987, down from nearly 45 percent in 1983. More than 65 percent of the 1987 deficit resulted from trade in fiber products. Pressure by U.S. producers, however, focused most attention---and sanctions in 1986---on Canadian exports of softwood lumber.

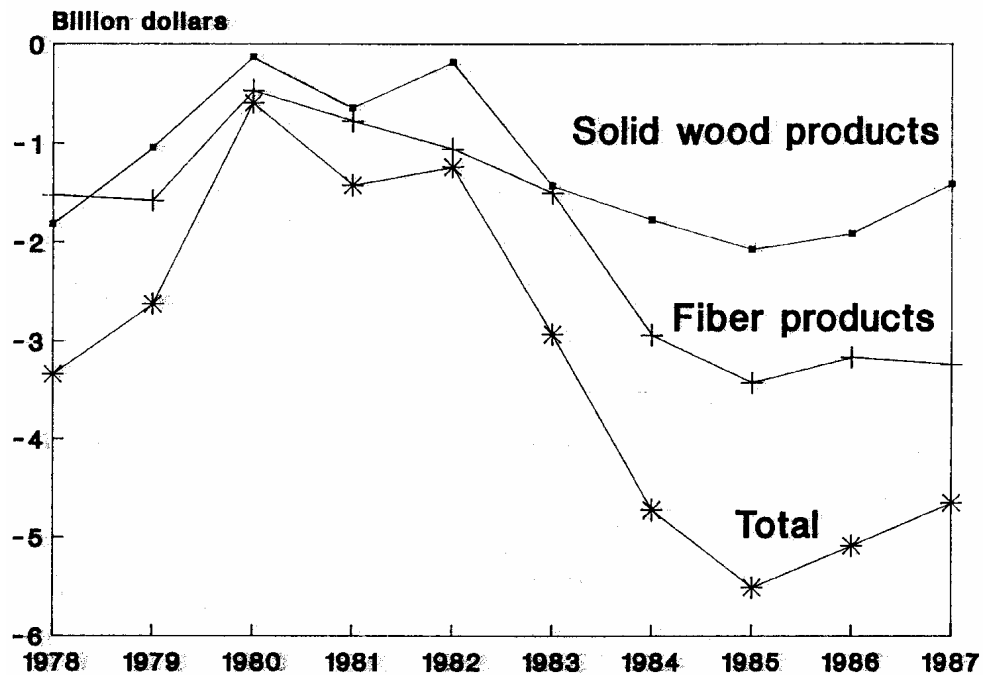

Figure 3---Value of U.S. forest products trade balance, 1978-87:

The only other region with which the United States has a deficit in forest products trade is "Other Western Europe" (\$714 million in 1987), chiefly a result of fiber products imports from Scandinavian countries. Forest products trade with Japan resulted in a surplus of \$2.5 billion in 1987; trade with the "European Economic Community" produced a surplus of \$104 billion. In the case of Asia and Europe, net forest products trade in 1987 was recovering from the exchange rate imbalance and recession-induced drop in trade between 1980 and 1985. This was not the case, however, in other markets for U.S. forest products. Net forest products trade with Latin America in 1987, while positive (\$538 million), was well below the surplus recorded in 1981 (\$860 million);

Commodities and Aggregated Commodity Groups

The following tabulation lists the 18 commodity groups aggregated from individual commodity items. The groups are separated into two broad sectors of the forest products industry.

FLOW/ Sector/ Commodity group	FLOW/ Sector/ Commodity group
IMPORTS	EXPORTS.
Solid wood products	Solid wood products
Softwood logs	Softwood logs
Hardwood logs	Hardwood logs
Softwood lumber	Softwood lumber
Hardwood lumber	Hardwood lumber
Softwood veneer	Softwood veneer
Hardwood veneer	Hardwood veneer
Softwood plywood	Softwood plywood
Hardwood plywood	Hardwood plywood
Particleboard	Particleboard Hardboard
Insulating board	Insulating board
Other solid wood products	Other solid wood products
Fiber products	Fiber products
Wood chips	Wood chips
Waste paper	Wastepaper
Wood pulp	Wood pulp
Newsprint	Newsprint
Printing and writing paper	Printing and writing paper
Other paper and paperboard	Other paper and paperboard
Other fiber products	

The following tabulation lists individual commodity items that comprise each of the 18 commodity groups. The descriptions and seven-digit codes are those assigned by the U.S. Department of Commerce, Table numbers refer to the tables in this report.

FLOW/ Sector/ Commodity group/ Item	Code	Table number(s)
IMPORTS		1,3
Solid wood products		1,4

Chmelik, John T.; Brooks, David J.; Haynes, Richard W. 1989. United States trade in forest products, 1978 to 1987. Gen. Tech. Rep. PNW-GTR-240. Portland, OR: U.S. Department of Agriculture, Forest Service, Pacific Northwest Research Station. 102 p.

Tables summarize volume and unit value of United States trade in forest products. Import and export data are shown for 18 groups of commodities aggregated from 800 individual commodity items; original data were collected and reported by the U.S. Department of Commerce. Data given for each commodity group include detail on trading partners and information on shipments through four regional aggregations of U.S. Customs Service Districts.

Keywords: Imports, exports, customs districts, trading partners, forest products.

The **Forest Service** of the U.S. Department of Agriculture is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives—as directed by Congress—to provide increasingly greater service to a growing Nation.

The U.S. Department of Agriculture is an Equal Opportunity Employer. Applicants for all Department programs will be given equal consideration without regard to age, race, color, sex, religion, or national origin.
