

1962 OREGON LOG PRODUCTION

by M. E. Metcalf

Log production in Oregon for 1962 reached 8.5 billion board feet, the highest since 1959, with 41 percent of it coming from forest industry-owned lands. The proportion of the total cut coming from all private lands fell to 48 percent, the lowest ever, while the proportion from National Forest lands rose to 36 percent, the highest ever.

Total production for 1962 rose 1.08 billion board feet over 1961 due to increased production from all ownerships except State. Total production from National Forest lands reached 3.07 billion board feet, the highest ever, an increase of 633 million board feet over 1961. Production rose 244 million board feet on private lands and 209 million board feet on Bureau of Land Management lands.

The early release of this data as well as the addition of information on the production from lands owned by forest industry was made possible by the recent adoption by the State Forester's office of electronic data processing methods for compiling log harvest data.
