Abstract

Yusha, Alex; Martignoni, Mauro E.; Iwai, Paul J. An English translation of Russian common names of agricultural and forest insects and mites. Gen. Tech. Rep. PNW-183. Portland, OR: U.S. Department of Agriculture, Forest Service Pacific Northwest Forest and Range Experiment Station; **1985**. 84 p.

This translation, based on a list of Russian names of insects and mites by W. Laux and G. Schmidt and published in 1979, is designed to assist English-speaking entomologists and other biologists in identifying insect species from their Russian vernacular names as listed in Soviet Union journals. The translation consists of three lists: (1) species arranged taxonomically (orders, families, genera, and species); (2) scientific (Latin) binomials (genus and species) arranged alphabetically; and (3) translated common names in alphabetical sequence. Each list contains 1,345 entries, and each entry can be matched by page number to the original Cyrillic spelling in the publication by Laux and Schmidt.

Keywords: Nomenclature (insect), nomenclature (mite), translations.

Introduction

This translation is part of the activities of Project V-01.0705, Microbiological Control of Insect Pests, of the U.S./U.S.S.R. Joint Working Group on the Production of Substances by Microbiological Means, under the U.S./U.S.S.R. Agreement on Cooperation in Science and Technology. Its main purpose is to help English-speaking entomologists and other biologists identify arthropod species from their vernacular names listed in Soviet Union publications. Frequently, scientific names of insects and other arthropods are not mentioned in Soviet publications, especially those dealing with applied entomology.

This is a translation of a list published in Germany by Laux and Schmidt (1979). Laux and Schmidt list scientific (Latin) names of insects and mites, with their vernacular names in the original Cyrillic spelling as found in the Russian entomological literature. Laux and Schmidt did not attempt to translate or to transliterate the Russian common names of species.

Work on this translation started in April 1981. Most of the Russian common names in the list by Laux and Schmidt were translated literally. When we could not find corresponding English terms, we developed an equivalent English version, after careful interpretation of the Russian name. The translated common names were filed on microcomputer disks with the aid of a program designed to handle six separate fields: order, family, scientific name of the species (Latin binomen or trinomen), translated common name, corresponding page number of the publication by Laux and Schmidt, and a reference code number to be used during further processing and sorting of the input. When the translation and filing were completed, we reviewed the listing for spelling, duplication, and other obvious errors, and made appropriate corrections.

The corrected file was then sorted and arranged in three separate lists:

1. Orders listed in alphabetical sequence; families listed alphabetically within each order; scientific names of the species listed alphabetically within each family, each name with the corresponding English translation of the Russian common name and the page number of the publication by Laux and Schmidt.
2. Scientific names of the species listed alphabetically, each with the corresponding higher rank taxa, English translation, and page number of the publication by Laux and Schmidt.
3. English translations of the Russian common names of the species listed alphabetically, each with the corresponding scientific name, higher rank taxa, and page number of the publication by Laux and Schmidt.

The lists were proofread and revised by us, by Igor G. Kozak, a professional translator, and by Wolfrudolf Laux, senior author of the original German publication. Additional specialists were consulted for particular questions (for example, taxonomy). In the course of our work, we also used bilingual dictionaries and several English and Soviet books and monographs. Two drafts were prepared and revised before producing the final printout. Each of the three lists in this version contains 1,345 entries.

Acknowledgments

Because Laux and Schmidt did not sort the scientific names of the species alphabetically or by taxonomic categories, their list is not suitable for the user who wants to find the Russian vernacular corresponding to a particular scientific name. Our version permits this use, as it lists the species in taxonomic sequence as well as alphabetically, by Latin binomials or trinomials. The page numbers in our lists refer to pages of the publication by Laux and Schmidt, where the user will find the corresponding original Cyrillic spelling of the common name of each species. We believe that the cross-reference feature of our translation considerably expands the usefulness of the list by Laux and Schmidt.

We would appreciate receiving corrections and comments concerning the translated vernacular names of the species, and we encourage our readers to suggest additional entries. Correspondence should be addressed to the senior author, Forestry Sciences Laboratory, USDA Forest Service, 3200 Jefferson Way, Corvallis, Oregon 97331, U.S.A.

We gratefully acknowledge Wolfrudolf Laux and Gunther Schmidt, Biologische Bundesanstalt für Land- und Forstwirtschaft, Berlin-Dahlem, Federal Republic of Germany, for their important contributions. Permission to use their publication was granted by the authors and the publisher, Kommissionsverlag Paul Parey, Berlin. Very kindly, W. Laux also reviewed the second draft of our translation and offered valuable suggestions.

The first draft was critically reviewed by Igor G. Kozak, a professional translator and editor, East-West Features Service, Washington, D.C. We owe him special thanks for his careful linguistic suggestions and editorial improvements.

We acknowledge the cooperation of Patricia Williams, Deborah M. Gardenier, and Walter G. Thies, Pacific Northwest Forest and Range Experiment Station, Portland and Corvallis, Oregon, who assisted in various aspects of programming, and of Celas Hug, Milne Computer Center, Oregon State University, Corvallis, who processed the data.

For their continuous support, we express our gratitude to Helen R. Whiteley, the U.S. Chairman of the U.S./U.S.S.R. Joint Working Group on the Production of Substances by Microbiological Means; to Carlo M. Ignoffo, U.S. Coordinator of Project V, Microbiological Control of Insect Pests; and to Janet L. Shoemaker and Robert D. Watkins of the American Society for Microbiology.

Funds for this work were provided in part by National Science Foundation contract No. C-INT77-19256 to the American Society for Microbiology, and Agreement No. PNW-83-269 between the American Society for Microbiology and Pacific Northwest Forest and Range Experiment Station.

Yusha, Alex; Martignoni, Mauro E.; Iwai, Paul J. An English translation of Russian common names of agricultural and forest insects and mites. Gen. Tech. Rep. PNW-183. Portland, OR: U.S. Department of Agriculture, Forest Service, Pacific Northwest Forest and Range Experiment Station; **1985**. 84 p.

This translation, based on a list of Russian names of insects and mites by W. Laux and G. Schmidt and published in 1979, is designed to assist English-speaking entomologists and other biologists in identifying insect species from their Russian vernacular names as listed in Soviet Union journals. The translation consists of three lists: (1) species arranged taxonomically (orders, families, genera, and species); (2) scientific (Latin) binomials (genus and species) arranged alphabetically; and (3) translated common names in alphabetical sequence. Each list contains 1,345 entries, and each entry can be matched by page number to the original Cyrillic spelling in the publication by Laux and Schmidt.

Keywords: Nomenclature (insect), nomenclature (mite), translations.

The **Forest Service** of the U.S. Department of Agriculture is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives — as directed by Congress — to provide increasingly greater service to a growing Nation.

The U.S. Department of Agriculture is an Equal Opportunity Employer. Applicants for all Department programs will be given equal consideration without regard to age, race, color, sex, religion, or national origin.
