Geographic Range

This BpS occurs throughout arctic AK, from the Bristol Bay lowlands in southwestern AK to the North Slope on the Arctic Ocean.

Biophysical Site Description

This BpS is common in the hills and mountains of arctic Alaska on sites that are typically too harsh to support the growth of vascular plants. Common slope positions include sideslopes and exposed summits and ridges. Sites are typically acidic and dry to mesic and often rocky. It is especially common on recent volcanic deposits with little soil development (Boggs et al. 2008).

Vegetation Description

The following information was taken from the draft Arctic Ecological Systems description (Boggs et al. 2008):

Lichen cover is >25%, and vascular plant species cover is <25%. Foliose and fruticose lichens dominate and include Umbilicaria spp., Rhizocarpon geographicum, Cladina stellaris, Racomitrium lanuginosum, Flavocetraria spp. and Alectoria ochroleuca. Common dwarf-shrubs include Loiseleuria procumbens, Betula nana, Ledum palustre ssp. decumbens, Empetrum nigrum and Vaccinium uliginosum.

Disturbance Description

Crustose lichen communities are likely early seral but are likely to persist indefinitely because of harsh environmental conditions that inhibit the growth of vascular plants (Viereck et al. 1992; III.C.2.a). The successional status of foliose and fruticose lichen communities is unknown (Viereck et al. 1992; III.C.2.b).

Adjacency or Identification Concerns

*Dominant Species are from the NRCS PLANTS database. To check a species code, please visit <http://plants.usda.gov>.

**Fire Regime Groups are: I: 0-35 year frequency, surface severity; II: 0-35 year frequency, replacement severity; III: 35-100-year frequency, mixed severity; IV: 35-100+ year frequency, replacement severity; V: 200+ year frequency, replacement severity

Native Uncharacteristic Conditions

Scale Description

Small to large patch.

Issues/Problems

Comments

This model was created by Kori Blankenship and Keith Boggs based input from experts who attended the LANDFIRE Arctic Modeling Meeting (April 2008) and the draft Arctic Ecological Systems description (Boggs et al. 2008).

Fire Intervals

	Avg FI	Min FI	Max FI	Probability	Percent of All Fires
Replacement					
Mixed					
Surface					
All Fires					

Fire Intervals (FI):

Fire interval is expressed in years for each fire severity class and for all types of fire combined (All Fires). Average FI is central tendency modeled. Minimum and maximum show the relative range of fire intervals, if known. Probability is the inverse of fire interval in years and is used in reference condition modeling. Percent of all fires is the percent of all fires in that severity class.

*Dominant Species are from the NRCS PLANTS database. To check a species code, please visit <http://plants.usda.gov>.

**Fire Regime Groups are: I: 0-35 year frequency, surface severity; II: 0-35 year frequency, replacement severity; III: 35-100-year frequency, mixed severity; IV: 35-100+ year frequency, replacement severity; V: 200+ year frequency, replacement severity
